**SUMMARY OF PROPOSED TERMS FOR
CONVERTIBLE PROMISSORY NOTE (BRIDGE) FINANCING**

The following is a summary of the basic terms and conditions of a proposed convertible promissory note financing of “YAPPERapp LLC”, a Washington DC Limited Liability Company (the “**Company**”). This term sheet is for discussion purposes only and is not binding on Company or the Investors (as defined below), nor is Company or any of the Investors obligated to consummate the convertible promissory note financing until a definitive convertible note purchase agreement has been agreed to and executed by Company and the Investors.

Financing Amount: Up to \$200,000 in aggregate principal amount of convertible promissory notes (the “**Notes**”).

Closings: The Company may close the sale of the Notes in one or more closings with one or more purchasers of the Notes acceptable to the Company (the “**Investors**”).

Definitive Agreement: The Notes will be issued and sold pursuant to a convertible note purchase agreement prepared by the Company’s legal counsel and will contain customary representations and warranties of the Company and the Investors (the “**Note Purchase Agreement**”).

Maturity Date: Principal and unpaid accrued interest on the Notes will be due and payable 24 months from the date of the Note Purchase Agreement (the “**Maturity Date**”).

Interest: Simple interest will accrue on an annual basis at the rate of 8% per annum based on a 365 day year.

Conversion to Equity: Automatic Conversion in a Qualified Financing. If the Company issues equity securities (“**Equity Securities**”) in a transaction or series of related transactions resulting in aggregate gross proceeds to the Company of at least \$500,000¹, including conversion of the Notes and any other indebtedness (a “**Qualified Financing**”), then the Notes, and any accrued but unpaid interest thereon, will automatically convert into the equity securities issued

¹ This paragraph describes an equity financing that will result in the automatic conversion of the Notes into equity. Because the conversion is automatic (as opposed to occurring at the Investors’ election) the Investors will want to see a dollar value here that represents a “real” round of equity financing. For a typical pre-institutional-funding company, a real round of equity financing would raise \$200,000-\$1,000,000, but the number that represents a “real” round of equity financing will obviously vary from company to company.

CONFIDENTIAL

pursuant to the Qualified Financing at a conversion price equal to 80% of the per share price paid by the purchasers of such equity securities in the Qualified Financing.

[Sale of the Company]:²

If a Qualified Financing has not occurred and the Company elects to consummate a sale of the Company prior to the Maturity Date, then notwithstanding any provision of the Notes to the contrary (i) the Company will give the Investors at least five days prior written notice of the anticipated closing date of such sale of the Company and (ii) the Company will pay the holder of each Note an aggregate amount equal to 2.0³ times the aggregate amount of principal and interest then outstanding under such Note in full satisfaction of the Company's obligations under such Note.]

Pre-Payment:

The principal and accrued interest may not be prepaid unless approved in writing by Investors holding Notes whose aggregate principal amount represents a majority of the outstanding principal amount of all then-outstanding Notes (the "***Requisite Holders***").

Amendment and Waiver:

The Note Purchase Agreement and the Notes may be amended, or any term thereof waived, upon the written consent of the Company and the Requisite Holders.

No Security Interest:

The Notes will be a general unsecured obligation of the Company.

Fees and Expenses:

Each Investor will bear its own fees and expenses incurred in the transactions contemplated by this term sheet.

² If the Company is sold prior to the Maturity Date, the Investors will want the Notes repaid at the closing of the sale. Furthermore, given the risks involved with lending the Company money in the bridge financing, the Investors will want more a nominal interest rate of return in the sale. This optional paragraph gives the Investors the ability to get equity-like "upside" in a sale of the Company by requiring the Company to repay a multiple of the principal and interest actually outstanding under the notes at the time of the sale.

³ When this provision is employed, we typically see a range of multipliers from 1.5X – 3X.

CONFIDENTIAL

THIS CONVERTIBLE PROMISSORY NOTE HAS NOT BEEN REGISTERED UNDER THE SECURITIES ACT OF 1933, AS AMENDED. NO SALE OR DISPOSITION MAY BE AFFECTED EXCEPT IN COMPLIANCE WITH RULE 144 UNDER SAID ACT OR AN EFFECTIVE REGISTRATION STATEMENT RELATED THERETO OR AN OPINION OF COUNSEL FOR THE HOLDER SATISFACTORY TO THE COMPANY THAT SUCH REGISTRATION IS NOT REQUIRED UNDER THE ACT OR RECEIPT OF A NO-ACTION LETTER FROM THE SECURITIES AND EXCHANGE COMMISSION.

CONVERTIBLE PROMISSORY NOTE

\$ _____, 20____
Washington, DC

For value received [YAPPERAPP LLC], a Washington DC based corporation (the "**Company**"), promises to pay to (**Name of Person**) or its assigns ("**Holder**") the principal sum of \$(**Investment Amount**) together with accrued and unpaid interest thereon, each due and payable on the date and in the manner set forth below.

This convertible promissory note (the "**Note**") is issued as part of a series of similar convertible promissory notes (collectively, the "**Notes**") pursuant to the terms of that certain Convertible Promissory Note Purchase Agreement (as amended, the "**Agreement**") dated as of _____, 20____ to the persons and entities listed on the Schedule of Purchasers attached to the Agreement (collectively, the "**Holders**"). Capitalized terms used herein without definition shall have the meanings given to such terms in the Agreement.

1. **Repayment.** All payments of interest and principal shall be in lawful money of the United States of America and shall be made pro rata among all Holders. All payments shall be applied first to accrued interest, and thereafter to principal. The outstanding principal amount of the Loan shall be due and payable on _____, 20____ (the "**Maturity Date**")

2. **Interest Rate.** The Company promises to pay simple interest on the outstanding principal amount hereof from the date hereof until payment in full, which interest shall be payable at the rate of 8% per annum or the maximum rate permissible by law, whichever is less. Interest shall be due and payable on the Maturity Date and shall be calculated on the basis of a 365-day year for the actual number of days elapsed.

3. **Conversion; Repayment Premium upon Sale of the Company.**

(a) In the event that the Company issues and sells shares of its Equity Securities to investors (the "**Investors**") on or before the date of the repayment in full of this Note in an equity financing resulting in gross proceeds to the Company of at least \$200,000 (including the conversion of the Notes and other debt) (a "**Qualified Financing**"), then the outstanding principal balance of this Note shall automatically convert in whole without any further action by the Holder into such Equity Securities at a conversion price equal to 80% of the per share price paid by the Investors, and

CONFIDENTIAL

otherwise on the same terms and conditions as given to the Investors. Any unpaid accrued interest on this Note shall be converted into Equity Securities on the same terms as the principal of the Notes.

(b) If, after aggregation, the conversion of this Note would result in the issuance of a fractional share, the Company shall, in lieu of issuance of any fractional share, pay the Holder otherwise entitled to such fraction a sum in cash equal to the product resulting from multiplying the then current fair market value of one share of the class and series of capital stock into which this Note has converted by such fraction.

(c) Notwithstanding any provision of this Note to the contrary, in the event that the Company consummates a Sale of the Company (as defined below) prior to the conversion or repayment in full of this Note, (i) the Company will give the Holder at least five days prior written notice of the anticipated closing date of such Sale of the Company and (ii) at the closing of such Sale of the Company, in lieu of the principal and interest that would otherwise be payable on the Maturity Date, the Company will pay the Holder an aggregate amount equal to 2.0 times the aggregate amount of principal and interest then outstanding under this Note in full satisfaction of the Company's obligations under this Note.

(d) For purposes of this Note:

(i) **"Sale of the Company"** shall mean (i) any consolidation or merger of the Company with or into any other corporation or other entity or person, or any other corporate reorganization, other than any such consolidation, merger or reorganization in which the stockholders of the Company immediately prior to such consolidation, merger or reorganization, continue to hold at least a majority of the voting power of the surviving entity in substantially the same proportions (or, if the surviving entity is a wholly owned subsidiary, its parent) immediately after such consolidation, merger or reorganization; (ii) any transaction or series of related transactions to which the Company is a party in which in excess of 50% of the Company's voting power is transferred; *provided, however*, that a Sale of the Company shall not include any transaction or series of transactions principally for bona fide equity financing purposes in which cash is received by the Company or any successor or indebtedness of the Company is cancelled or converted or a combination thereof; or (iii) a sale, lease, exclusive license or other disposition of all or substantially all of the assets of the Company.

(ii) **"Equity Securities"** shall mean the Company's Participating Preferred Stock or any securities conferring the right to purchase the Company's Participating Preferred Stock or securities convertible into, or exchangeable for (with or without additional consideration), the Company's Common Stock or Participating Preferred Stock, except that such defined term shall not include any security (x) granted, issued and/or sold by the Company to any employee, director or consultant in such capacity or (y) issued upon the conversion or exercise of any option or warrant outstanding as of the date of this Note.

CONFIDENTIAL

4. Maturity. Unless this Note has been previously converted in accordance with the terms of Sections 3(a) through (c) above or satisfied in accordance with the terms of Section 3(d) above, the entire outstanding principal balance and all unpaid accrued interest shall become fully due and payable on the (“Maturity Date”)

5. Expenses. In the event of any default hereunder, the Company shall pay all reasonable attorneys’ fees and court costs incurred by Holder in enforcing and collecting this Note.

6. Prepayment. The Company may not prepay this Note prior to the Maturity Date without the consent of the Requisite Holders.

7. Default. If there shall be any Event of Default hereunder, at the option and upon the declaration of the Requisite Holders and upon written notice to the Company (which election and notice shall not be required in the case of an Event of Default under Section 7(c) or 7(d)), this Note shall accelerate and all principal and unpaid accrued interest shall become due and payable. The occurrence of any one or more of the following shall constitute an Event of Default:

(a) The Company fails to pay timely any of the principal amount due under this Note on the date the same becomes due and payable or any accrued interest or other amounts due under this Note on the date the same becomes due and payable;

(b) The Company shall default in its performance of any covenant under the Agreement or any Note;

(c) The Company files any petition or action for relief under any bankruptcy, reorganization, insolvency or moratorium law or any other law for the relief of, or relating to, debtors, now or hereafter in effect, or makes any assignment for the benefit of creditors or takes any corporate action in furtherance of any of the foregoing; or

(d) An involuntary petition is filed against the Company unless such petition is dismissed or discharged within 60 days under any bankruptcy statute now or hereafter in effect, or a custodian, receiver, trustee, assignee for the benefit of creditors (or other similar official) is appointed to take possession, custody or control of any property of the Company.

8. Waiver. The Company hereby waives demand, notice, presentment, protest and notice of dishonor.

9. Governing Law. This Note shall be construed and interpreted in accordance with the laws of the State of Florida and venue for any litigation arising hereunder shall be in Circuit Court of the Twelfth Judicial Circuit of the State of Florida, in and for Sarasota County.

10. Parity with Other Notes. The Company’s repayment obligation to the Holder under this Note shall be on parity with the Company’s obligation to repay all

CONFIDENTIAL

Notes issued pursuant to the Agreement. In the event that the Company is obligated to repay the Notes and does not have sufficient funds to repay all the Notes in full, payment shall be made to the Holders of the Notes on a *pro rata* basis. The preceding sentence shall not, however, relieve the Company of its obligations to the Holder hereunder.

11. Modification; Waiver. Any term of this Note may be amended or waived with the written consent of the Company and the Requisite Holders.

12. Assignment. This Note may be transferred only upon its surrender to the Company for registration of transfer, duly endorsed, or accompanied by a duly executed written instrument of transfer in form satisfactory to the Company. Thereupon, this Note shall be reissued to, and registered in the name of, the transferee, or a new Note for like principal amount and interest shall be issued to, and registered in the name of, the transferee. Interest and principal shall be paid solely to the registered holder of this Note. Such payment shall constitute full discharge of the Company's obligation to pay such interest and principal.

Executive Summary

Introduction

The \$26B Mobile App Market saw 115% year-over-year growth in 2013 with Messaging Apps growing at 203%. On the other hand, usership on Facebook is down 25% amongst 18-24 year olds. The trends show that we are becoming more and more interested in having a clear separation between our social media lives (how we want others to perceive us in cyberspace) and our real world mobile lives that indicate who we actually are.

Started in June 2013 by 3 GWU MBA Students, Yapper is a messaging app that lets people chat right here, right now. Yapper is a hyper-local and ephemeral messaging application that combines location-based chats with ephemeral (short lived, deleting) conversations, providing a bridge to your immediate community.

Problem Statement

Not only do App users lack quick and easy ways to find out what is going on around them, they are frustrated by the permanence and invasiveness of traditional social media. Traditional forms of social media are losing share to messaging apps because of privacy concerns and relevancy to the user in real time.

Solution

Yapper lets you find out what's going on right here and right now by connecting you to your physical community through chats that are broadcasted to anyone within a 5-block radius. The chats delete after 30 minutes of inactivity to ensure that they are relevant to location and time. Unlike competitors who share your location and personal information in order to connect you with *people* nearby, Yapper encourages real life interactions by connecting you through safe *conversations* happening nearby. Yapper allows you to see what is going on around you rather than who is around you and lets you completely dictate how you want to interact with your surroundings. Yapper does not share any information about you without personal approval, and your specific location is never revealed on Yapper.

Key Value Propositions

Yapper aims to change the way people and businesses interact with each other in the 'here and now' in this new and changing mobile society.

Market Analysis

Of the 90M total active iOS Mobile App users in the USA, 5M are college students and 4M use iOS messaging Apps. Yapper plans to focus our marketing efforts on college students. Students are outgoing, tech early adapters who need a platform that tells them what's going on around them without compromising their privacy or overwhelming them with irrelevant noise. Yapper plans to launch in DC where there are 150,000 college students and within months move to NYC where there are 1.3M students.

Revenue Model

Yapper is free for individual users, but the company plans to revolutionize the way businesses target their mobile customers and how mobile users consume ads. Yapper plans to offer businesses the opportunity to pay for targeted promotional offerings to potential customers within 5 city blocks. Promoted Yapps will not only add revenue and value to participating companies, but will also encourage business to consumer and consumer to consumer interaction while providing key customer data analytics and real time market research for businesses.

Team Members

Justin Lichtenstaedter, CEO: Has a media and marketing background and a deep understanding of the DC startup community through his internship at 1776.

Rob Wyant, President: Started his own company and has 3 years of management experience in process improvement and consulting.

Dane Hinnen, COO: Has 5 years of sales experience at a tech startup including an IPO.

Anthony Agby, CTO: Has been a developer for several startups and is an iOS coding specialist.

Financial Projections and Investment Needs

Although the team has bootstrapped the \$30K cost of getting an MVP (Minimum Viable Product) into the App Store, Yapper's estimated 9 month costs include technology infrastructure and headcount, marketing, product development, and operating costs totaling about \$200,000 in 2014 and \$800,000 in 2015. The technology costs go towards monthly fees to secure our back end servers, developing an Android version of the App, and expanding our product and team to new cities. To date, getYapper.com has over 7,000 page views and there have been articles written in several local, regional, and national online magazines. Yapper has over 1,500 users in 6 weeks and is growing an average of 17% per week. Yapper recently won 3rd place in the GWU Business plan competition taking home \$8K in cash and free office space for 6 months at start-up incubator, Affinity Labs. Yapper was also recently named DC's Hottest Showcasing Startup by TechCocktail. Looking at competitors and industry averages, Yapper expects to grow 7% per week with about 40% of installs becoming active users. With an Android version, family, friends, classmates, press, and campus reps in other cities, Yapper will get an initial 250 downloads per new market. With an industry standard growth rate of 30% a month, this puts Yapper at 16,000 users by December 2014 and over 500,000 by December 2015 with a break-even point early in 2016 from selling promoted Yapps to businesses.

Industry Overview

The mobile app marketplace is a rapidly growing industry that is being driven by revenue potential from cost to download, advertising, in app purchases, and data for targeting. At the end of 2012, there were 6.8 billion mobile subscriptions that accounted for 96% of the world's population. Over 1.2 billion people worldwide were using mobile applications by the end of 2012. That number is forecasted to grow by almost 30% per year moving forward.⁴ In the United States, 56% of adults own a smartphone with the number rising to 80% for ages 18-34.⁵ 81% of cell phone owners engage in text messaging and 50% download apps. These percentages see a significant increase with young adults, rising to 97% and 77% respectively for 18 to 29 year olds.⁶ In the first quarter of 2013, there were 13.4 billion app downloads worldwide which is an 11% increase over all of 2012.⁷ In 2013, there were over 100 billion unique app downloads in the app stores, up from 64 billion in 2012. It is estimated that that number will continue to grow to 268.7 billion by 2017. In 2013, 94.5% of apps were free compared to 90% in 2012, but revenue from mobile apps grew from \$18 billion in 2012 to \$26 billion in 2013.⁸

Standard text messaging (SMS) is still the most common form of communication in the U.S. compared to mobile chat apps. 60% of smartphone users use a messaging app while 94% use SMS. This lags other countries considerably; usage on messaging apps has already surpassed SMS in South Korea, the Netherlands, Japan, and Taiwan. Worldwide messaging app activity doubled SMS in 2013. The U.S. remains an attractive market for messaging apps because there is a lot of room for growth and the market remains fragmented with Facebook Messenger possessing the largest market share in 2012 at only 11% (data only for iOS).⁹

Additionally, smartphones have opened up services and advancements in technology have allowed coders to run checks on a user's background location while preserving battery life. This has made it easier for app developers to market to the consumer based on location, and users have adopted these apps that were previously considered to be too big of a battery drain to be viable. In 2012, 75% of app users downloaded apps that

used mobile location based services compared to only 54% in 2011.¹⁰ The emergence of mobile location-based services (MLBS) is estimated to bring in more than \$12.7 billion by 2014. According to Mashable's article "7 Ways Mobile Apps Are Driving Revenue for Businesses" in 2014, three of the top four ways mobile apps drive revenue for businesses are: 1) *Geo-targeted push notifications* - mobile devices would present users with information about the world around them in an automatic way, 2) *Geo-targeted Advertising* - These smart ads can target users by their specific location and display ads that are geographic and contextually optimized, and 3) *Dynamic Offers* - Businesses can use data collected through geo-tracking and ad campaigns to deliver just-in-time offers.¹¹

Company Overview

Problem

Yapper is designed to solve two major problems. The first is that App users lack one specific quick and easy way to find out what is going on around them in real time. Other apps provide platforms where consumers can rate past experiences at establishments that are in the immediate proximity, but do not tackle the issue of what is going on in real time. The reviews that other companies provide are based off of events that took place in the past and don't encourage person-to-person or group interaction. Other social media platforms enable users to organize events, but with such expansive networks, events are not location relevant to the user and it can be time consuming to fight through the noise to find one that is. Through localized conversations created by people nearby, Yapper creates content as it is happening. This ensures real time solutions to real time problems without having to connect the puzzle pieces created by an array of apps, texts, emails, and aimless physical exploring.

Yapper creates this relevant experience through exclusive and private conversations. Privacy is a major concern for college students who do not want their every move being tracked by anyone and everyone. Yapper ensures a safe experience by never revealing a user's exact location or full online profiles like many competitors do, and deleting all messages preventing a social trail that can lead to adverse consequences in the future. Students are scared to post to permanent social media platforms because of the potential negative social and employment implications that the media and Universities have publicized.

Value Proposition

Yapper aims to change the way people and businesses interact with the '*here and now*' through conversations in the new and changing mobile society.

¹⁰ [Kathryn Zickuhr](#), "Three-quarters of smartphone owners use location-based services" Pew Research Internet Project, 5/11/2012

¹¹ Ryan Matzner, "7 Ways Mobile Apps Are Driving Revenue for Businesses" Mashable 1/16/2014

Product Description

Yapper is a location-based social discovery chat app that allows the user to blast Yapps, which are messages or chats, to other users within Yapping distance. Yapping distance is a defined radius of 750 yards or 5 city blocks. The application offers Public, Promoted, and Private Yapps, which allow members to communicate with other users nearby who are participating in similar events, sharing similar experiences, have common interests, or are looking for others to connect with. Additionally, all chats will be deleted from Yapper servers after the conversation is deemed no longer relevant.

Public Yapps

Public Yapps allow users to message with all other Yapper users within a defined radius, which is a default of 750 yards or 5 city blocks in the initial launch. Users within Yapping distance will have access to all public Yapps. The radius is created at the GPS coordinates where the chat title was created.

Public Yapps are created by naming a conversation based on the topic of a message. An example could be a user at a football game broadcasting the message, "Tailgate 34C". That Yapp will get blasted out to everyone within a 750-yard radius. All users within Yapping distance of that message will receive a push notification alerting them that a chat has been created in their area. Users can then click into that "Yapp" and converse with others nearby based on the topic created by the community. Users will only have the ability to view the profiles of the members who have actually participated in the existing chat and those are the only users admitting to being within 5 blocks. All messages within Public Yapps will be deleted after 30 minutes of inactivity. If a dialogue takes place, the conversation will be deleted 30 minutes after the last message is sent. The limited life of Yapps ensures that all chats are relevant to the user and their current community.

Promoted Yapps

Promoted Yapps are permanent (semi-permanent) conversation topics that live from a distinct location. All of the messages inside of a Promoted Yapp delete after two hours. Initially, Promoted Yapps will be created by the Yapper team and by local businesses. The Yapper team will create pertinent subject lines that can always be relevant at a given location. An example would be "Food and Drinks" out on U street. All messages inside of the message board delete ensuring that people reading the conversations have a real time depiction of what people are saying and doing around them.

Promoted Yapps can also be paid for by local businesses promoting deals to anyone who is nearby. The business can pay based on how long they want the conversations to last and how far out they want the chat to be broadcasted. All messages inside of Promoted Yapps are deleted after 2 hours.

Private Yapps

Private Yapps are designed to facilitate messaging between friends or people within a community who do not want outsiders to enter their community. When a user creates a chat, they can click the private button and a "#" will be dropped into the title making it a private chat. This will make it so the chat does not show up on the feed of everyone

CONFIDENTIAL

within yapping distance. In order to participate in that chat, a user must have existing knowledge of the secret “#title” and search for it in the search bar on the main screen. An example could be “#MBA Class 2014”. The user could type that specific naming convention into their search bar on the main screen and if that chat exists in that location, it would pop up on the feed. The user would then be able to participate with all other users who have entered that naming convention and are within yapping distance. Once a Private Yapp is created, it lives from that location forever and only the messages inside delete. This allows establishments or offices to have permanent chat rooms that only people with knowledge of the “#” can enter. While the “Chat room” lives from that location forever, all private messages will be deleted 2 hours after they are written.

Registration

Anyone can create a Yapper account for free and the registration process is extremely simple. In order to create a Yapper account, prospective users must login with an existing Facebook account. Yapper will only publicize users’ first name last initial, profile picture, age, city and network (School or work affiliation). Eventually, Yapper intends to allow the user to create a profile using other social media platforms including LinkedIn, but the profile used in the initial launch will strictly be via Facebook. Yapper is very conscious about securing its users’ personal information and will have multiple notifications within the app to remind users that none of their information will be used outside of the application. Yapper requires a Facebook login for all users because it legitimizes the members and encourages candid relevant interaction.

Service Offering

Yapper intends to provide exceptional, personalized service, which will be crucial in building and protecting the business’s brand within the community. The company expects to provide a user-friendly experience through an easy to navigate interface. All customer concerns will be addressed with a customer-oriented focused intent of providing timely resolution and preventing any user dissatisfaction.

Yapper will constantly troubleshoot any issues that may arise with its app in order to remain innovative and provide a premium customer experience. In doing so, it will be well positioned to maintain a high user base for a relatively long period of time. This will increase the value of Yapper’s database of consumer profiles, thereby increasing the value of its advertising potential. This will also improve the firm’s profitability and increase its chances of long-term financial viability.

Competitor Analysis & Business Strategy

Competitor Analysis

Yapper is a messaging app at its core. Just like other messaging apps, such as WhatsApp and WeChat, Yapper eliminates the need to pay for traditional text messaging services. Additionally, Yapper has a focus on location-based messaging to ensure relevancy. The company incorporates ephemeral messages to maintain this

CONFIDENTIAL

level of relevancy and to limit a digital footprint for its users. Last, Yapper requires a Facebook Login to ensure authenticity amongst users. *Yapper is the only mobile app in the marketplace that offers this specific combination of features as a core competency. Exhibit 1A* illustrates a comprehensive competitive landscape, comparing Yapper with a few of its competitors.

Competitors include any mobile messaging app on the market as well as traditional text messaging services. Competitors can be broken into *direct competitors*, who are classified as location-based messaging apps, and *indirect competitors*, such as location-based apps for romantic endeavors, social media platforms used to communicate with the general public, and traditional messaging apps. *Exhibits 2A-3A* provide a summary of Yapper's direct and indirect competitors.

Business Strategy

In general, customer adoption of a messaging app is based on price, features and functionality, ease of use, popularity among peers, and market trends. A customer can consume media through websites, email, blogs, text messaging, and other mobile apps, making relevancy Yapper's pinnacle focus. Yapper's strength over competitive location-based social applications lies in these four categories: *proximity features, privacy settings, time sensitivity, and topic related threads*. An A/B Test conducted by the Yapper team showed that people are more comfortable being introduced to other users through a topic of shared interest before being pressured to reveal themselves to strangers. As a person feels comfortable with a topic of shared interest, they become more willing to partake in the conversation and share their candid opinions. This environment of privacy and security creates a competitive advantage for Yapper over other social media apps.

Yapper is also the only location-based chat application that deletes messages. Based on the same market research, the Yapper team discovered that prospective customers hesitate to express themselves on social media because they are conscious of their digital footprint. Since the conversations on Yapper delete after they become irrelevant, users can find a sense of security knowing that the messages will not always be available. As users feel more comfortable, they will speak more candidly about what is around them, and be more open about their feelings or views on topics of shared interest.

Competitive Advantage

Yapper's source of competitive advantage lies with its product differentiation as the only hyper-local and ephemeral messaging application on the market. The unique aspect of its product is the limited radius in which users can access chats and the ephemeral nature of the chats themselves. This allows users to have authentic contact with other users. Also, since Yapper allows access to private, localized group conversations based on a 'key word search,' it allows the user an ability to talk to people that they may know but may not have the contact information of. Last, the limited radius can facilitate targeted marketing for firms that wish to purchase Promoted Yapps.

Marketing Plan

Target Customer

The target customer for Yapper is a student on a college campus who uses mobile apps on a regular basis. There are currently 22 million college students in the United States. The topics of the permanent Promoted Yapps will be designed to relate to our initial target demographic. Users will customize the app and add their own chat categories as market awareness increases at specific locations. Accordingly, the target market will expand as the app evolves and gains widespread recognition.

Currently, Yapper's ideal customer segment would be undergraduate students in a Greek organization at an urban college. Yapper is targeting students in city college campuses because students are often early adopters; they are more eager and willing to meet new people, especially other college students, and they want to go out and mingle within their community. There are also greater population densities in metropolitan areas.

From an advertising perspective, Yapper's target market is a firm of any size that wishes to participate in geographically targeted marketing efforts aimed at Yapper's users. Small firms, both local and highly specialized, can benefit from Yapper's services because the app's proximate radius settings will increase local awareness of a given firm, particularly among those within walking distance of the firm's physical location. Large firms can utilize the advertising services to let users know about local branches or stores while promoting sales or other events. Yapper can provide value for both subsets of advertisers in a more directed manner than other services currently offered in this market space.

Entrance Strategy

Yapper will penetrate individual markets in a strategic sequence. The goal is the creation of mass membership in specific locations in order to facilitate communication. Yapper will promote on a region-by-region basis by selecting a region of the country and then rolling the product out at college campuses throughout that region.

The team launched its marketing efforts at George Washington University in Washington DC by promoting the app to Greek organizations on campus, social media campaigns, and guerrilla marketing efforts. They have also met with campus bars including Stoney's and McFadden's and have planned the first launch party in late May at McFadden's, which will allow them to leverage their user base with a local business to provide value for both the consumer and the business. With close to 1,500 users at George Washington University, the Yapper team recently brought on three campus reps at the University of Maryland, all of who have Greek affiliations. The UMD campus reps will promote the app to other fraternities and sororities in College Park and will spread the word to other on-campus organizations.

CONFIDENTIAL

Yapper will use the schools in the DC area to validate the product and iterate based on consumer feedback. The plan is to have a version 2.0 in place by the end of the summer. Version 2.0 will be the byproduct of constant testing and feedback and the version that the Yapper team feels is appropriate for a national launch.

Yapper plans on having this version ready prior to the start of the 2014-15 academic school year. The company will bring on campus reps in both the Boston area and the New York area and have them ready for a rollout during freshman orientation at their respective campuses. Yapper will incentivize each campus rep by providing \$.xx for every user they sign up at their school.

Yapper will expand to Boston and New York for several reasons. First off, they are in the same region of the United States that the founders are from which will allow them to leverage existing networks. Also, the college population density in those areas plays a major factor. There are over 40 schools in the Massachusetts area including MIT, Harvard, Tufts, Northeastern University, Boston College, Boston University, Emerson College, and Simmons College, all being in such close proximity, the app could quickly spread to a variety of students in the city. Similarly, New York City has the greatest number of college students in one city with 1.3 million students.

Operations Plan

Pre-Launch

Yapper's pre-launch production schedule consisted of standard industry benchmarks such as database setup, chat integration, initial bug fixing, beta testing, post-beta bug fixes and feature tweaks, and gold master app production. By systematically working through this schedule, Yapper has successfully created and launched a minimum viable product (MVP) that is currently available to download for free in the iOS App Store. The founders bootstrapped the MVP and spent \$15,000.00 to get the product approved for the iOS App Store on January 17, 2014.

Validation Stage

Operational priorities in the Validation Stage are to continue to build the company's user base, iterate the product, and foster relationships with experienced advisors and mentors.

Since launch, Yapper has realized impressive growth and is exceeding industry metrics. An article from Y Combinator's Paul Graham¹² benchmarks successful startups as having 5-7% growth per week, every week, indefinitely. In the first six weeks since launch Yapper has realized an average of 17% growth per week and has registered a total of 1,311 downloads. A full report of initial growth can be found in *Exhibit 4A*. The

¹² <http://www.paulgraham.com/growth.html>

CONFIDENTIAL

Yapper Team has attained these downloads and growth metrics using guerrilla-marketing efforts, as described in the *Marketing Plan*, and with a meager marketing budget of \$1,500.00.

Additionally, the product has undergone three iterations and has dramatically progressed from its initial MVP. The app has a cleaner UI/UX, is more reliable and secure, has enhanced user commands and instructions, has introduced emoji's, and most importantly, has reduced the number of in-app crashes. Future iterations in the Validation Stage will continue to be influenced by actual customer feedback and observations of user behaviors through our extensive reporting and back-end analytics. The goal of the Validation Stage is to continue to iterate the product to be viable for a larger-scale marketing effort. Generating revenue is not a focus in the Validation Stage.

Last, The Yapper team has communicated with advisors and potential Board of Director candidates with the intention that with progress through the Growth Stage, the team can lean on this network and create a more formalized Board to help guide them through a Seed Round of funding and help them market and monetize the product.

Growth Stage

The Growth Stage will take lessons learned in the Validation Stage and scale the product to new markets. Many operational changes will need to happen in order to successfully make this transition, including strategic technical hires, the creation of an Android app, implementation of a revenue structure, and the adherence to a significant marketing approach. Additionally, the founding team will need to graduate out of the Business School breakout rooms and partner with a local incubator or co-sharing workspace to subcontract hot desks for the entire Yapper team. Each member will have ownership of distinctly different roles in the Growth Stage, but will continue to rely on the help and support of the entire management team to accomplish tasks at hand. The total expected costs of these Operational changes will be described in further detail in the *Financial* section of this Business Plan, but include tech expenses, marketing costs, operating costs, and general & administrative expenses of approximately \$200,000 for 9 months.

In addition, Yapper must leverage their existing relationships with experienced mentors and advisors and form a more structured Board of Directors. This Board will help Yapper strategically market the product to new clients and scale the product to new customers.

Last, the initial implementation of a revenue structure will be introduced in the Growth Stage. By continuing to grow at or above 5-7% per week, Yapper will be able to discuss services with potential clients that leverage synergies between the two parties. As discussed in the product description, Yapper's core competency is its ability to provide a relevant user experience based on time and location. Yapper has developed its revenue structure to take advantage of those two value propositions, time and location. In the Growth Stage, the company plans to charge businesses to promote their own Yapps based on *time* and *distance* (see *Exhibit 5A*), and expects that it will generate \$19.70

CONFIDENTIAL

per Promoted Yapp (*Exhibit 6A*) or \$219,000.00 in Total Revenue in the first year (*Exhibit 7A*). This is explained in greater detail in the *Financial* section of this Business Plan.

Mature Stage

In the Mature Stage, the founders expect that organic growth will occur in new markets and revenue will increase based on increased demand in these new markets. An increased user base will give Yapper the opportunity to charge clients for more targeted promotions based on first-party data collection methods. Anticipated data collection methods will include tagging, associating trends, and distinguishing user demographics that would be applicable to Yapper's current clientele. Also, Yapper will be able to offer real-time conversations, searchable by location, which could be a valuable product offering for new clients. Last, with scale, Yapper could provide current clients the ability to integrate near-field communications (NFC) such as iBeacons as a more direct way of advertising to their target consumers who are within walking distance of their business.

As the company scales to the Mature Stage, it will need to bring on more technical talent and will need to anticipate higher technical costs associated with increased traffic such as: *servers, API requests, and data usage*. Also, while the cost of acquisition (CoA) per new user should drop based on organic growth, the company will anticipate increased marketing costs when expanding to new markets and pivoting to comparable target segments.

MANAGEMENT TEAM & VENTURE STRUCTURE

Justin Lichtenstaedter, Cofounder and CEO

Justin is from New Rochelle, New York, and graduated from the University of Miami in 2010 with a double major in Broadcast Journalism and Sports Management. In 2014 he will graduate from the George Washington University Global MBA program in Washington, DC. Justin has extensive broadcasting and marketing experience, working with world-renowned brands including the Miami Heat of the NBA and Monumental Sports of the NBA, WNBA, and NHL. In addition to media marketing experience, Justin spent 2013 working for Washington DC's top technology start-up incubator 1776 to transform Yapper from an idea to a product using DC's networks, advisors, developers, and media outlets. Justin's experience in front of the camera, behind the microphone, and with guerilla marketing and networking make him the perfect catalyst to spread the Yapper message and grow user adoption and brand awareness. He also brings a global perspective to the team having spent extended time working in one of the world's most entrepreneurial nations, Israel.

Justin's role as CEO encompasses being Yappers main communicator and brand catalyst. With vast experience both using and analyzing mobile applications, Justin is in charge of marketing and promoting value propositions, product roadmap details for best product market fit, daily meetings, demoing and pitching the product 24/7, Facebook

CONFIDENTIAL

media, managing campus reps, investor, business partner, and advisor relationships, and driving marketing and operations plans.

Robert Wyant, Cofounder and President

Rob is from Sarasota, Florida, and graduated from the University of Miami in 2009 with a major in International Finance and Marketing. In 2014 he will graduate from the George Washington University Global MBA program in Washington, DC. An early entrepreneur, upon graduating from the University of Miami, Rob started his first incorporated company that grew to an international ecommerce website selling proprietary consumer products. Rob's technical background further developed through his experience as the financial reporting manager of a private asset management firm where he created a CRM database that managed over 30,000 prospective investors and mapped database enhancements that increased efficiency. At the firm Rob also implemented change management by developing an electronic vendor portal that outsourced monthly deliverables to the firm's subcontractors and redirected the focus and accountability of two analyst positions. As a Summer Associate for Deloitte Consulting LLP's Federal Strategy & Operations practice, Rob focused on modernizing one of the largest financial databases in the world. Rob's entrepreneurial foresight, design skills, and extensive technical background in process improvement and management consulting explain his title as President.

Rob's role as President encompasses being Yappers main product designer and user experience manager. Rob's constant use of competing products, attention to detail, and knowledge of new technology make him not only a mobile application critic, but also an experienced guide to successfully designing a product for Yapper's market fit. He is in charge of product design, graphics, creative strategy, Twitter media, legal, user experience, design meetings, demoing and pitching features, functionality, and design, and managing product enhancement plans and implementation.

Dane Hinnen, Cofounder and COO

Dane is from Denver, Colorado, and graduated from the University of Colorado in 2007 with a major in Marketing. In 2014 he will graduate from the George Washington University Global MBA program in Washington, DC in Business Analytics. Dane has extensive experience in tech startups, as he played a crucial role in guiding Service Source International, Inc. through its IPO and assisted in the rapid growth of the firm. Over the course of five years, Dane managed teams of 15 employees with over \$10M in annual sales for two separate publicly traded international clients.

Additional experience in marketing at both Crocs, Inc. and GWU Athletics, and fresh off of his DC Mayors Consulting Fellowship on Economic Development for the Creative Economy, Dane is using analytics and industry insights to develop and track Yapper's go-to-market and growth strategies using lean startup methods.

Dane's role as COO encompasses being Yappers main analytics and financial manager. Dane's quantitative skills, management skills, and experience building tools to

CONFIDENTIAL

grow companies, have allowed the rest of the team to focus on designing, developing, and marketing the product and business. Dane is in charge of sales, logistics, analytics, financial statements, scheduling, and maintaining growth while staying within the boundaries of lean startup methods.

Anthony J. Agby Jr. CTO

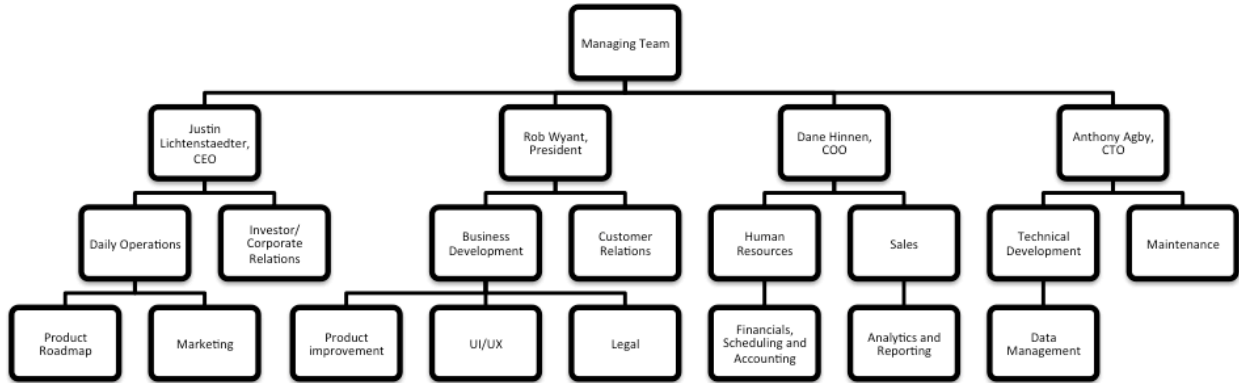

Originally from Toledo, Ohio, Anthony is a 2009 Economics graduate from Miami University where he was an Evans Scholar. After immersing himself in the DC Tech community, Anthony noticed a wealth of ideas but a lack of people to build them. He made the decision to become a developer based off of his passion to bring these ideas to life. Using books, free online courses, and his own personal network, Anthony started down this path.

Starting small, Anthony began doing freelance work to refine his core technical skills. Before long he had jumped in headfirst. Working for three different startups and utilizing different skills, he helped build web apps, update iOS apps, build mobile websites, automated systems, and created databases. Anthony brings the tech talent to the team as an expert iOS mobile developer with experience building similar social, mobile, and location based products. He is in charge of architecting and building Yapper, the databases, and connection plug-ins for Facebook and chat integrations as well as data management and maintenance. His immersion in the tech world, economics background, attention to detail, love of technology innovation and problem solving, and persevering attitude bring a unique perspective and skill set to the team.

Structure and Additional Personnel needed

As CEO and marketing manager, Justin will manage all employees involved in Marketing. As President, Rob will manage all employees in design, graphics, or product development. As COO, Dane will manage all employees in operations, analytics, administrative, and finance, and CTO, Anthony will have full control of app development while reporting to the 3 founders for product. Additionally, Anthony will manage all employees in technology or data management.

The three co-founders will be in charge of interviewing, hiring, and managing any immediate additional personnel including the hiring of a full time Android developer, campus marketing reps, and a lawyer. Anthony will be involved with transferring and copying any needed data and code into an Android friendly platform and database as well as training and managing any technology specialists or interns.

Advisory Board

Hellmut Adolphs

Hellmut is an entrepreneurial technologist specializing in applications development, big data, infrastructure, and development operations.

Hellmut has over 13 years of experience in many areas ranging from systems and software architecture, big data, emerging technologies, client acquisition, sales engineering support, SCM, release management, automation, Agile software development, project management, IT operations, and production support.

He has lead development efforts for high-profile projects in both start-ups and fortune 500 companies. He has participated in teams of all sizes involving professionals of different backgrounds including developers, systems engineers, UI, UX, project managers, business analysts and QA experts.

Hellmut was a co-founder and led technical architecture at mobile location-based technologies start-up Condaptive which was acquired in May 2011 by Millennial Media, one of the largest independent mobile ad networks.

Thor Ernstsson

Thor has extensive knowledge of startups and has played an integral role in turning several companies into major corporations. Thor is the founder of Casual Corp, a venture studio in NYC that starts companies with pre-product founders and helps corporate entrepreneurs discover, validate, and build new product lines or businesses. He helps companies and startups build internal ventures with Fortune 100 companies. Thor was previously the CTO at Audax Health, a company that gives users a stronger, more informed, and more empowered voice in healthcare through partnerships with health insurance companies. While at Audax, the company scaled from 4 to 70+ employees and was named one of the top 5 most disruptive startups in healthcare in 2013.

He was the Lead Architect at Zynga and was responsible for building Zynga's first remote studio. That studio created and released Frontierville which was the company's most successful product to launch at the time.

CONFIDENTIAL

Thor was also the owner of “Thor’s Hammer”, where he built a 40+ person gaming studio from scratch in 6 months as the CTO of a \$400m/yr. parent company. He released products reaching approximately 3 million users and designed and executed global marketing campaigns (\$300k spent in 5 days).

Jim Chung (*Unofficial Advisor until founders graduate from GWU*)

Jim is the founding director of the Office of Entrepreneurship and oversight for the Office of Technology Transfer at George Washington University. He is in charge of the promotion of university-wide faculty and student entrepreneurship and technology transfer through support for innovation, education, venture creation, and connections. He is a Co-Principal Investigator and Instructor for the NSF I-Corps Node in greater DC area.

Jim is the Former Director of the MTECH Venture Accelerator at the University of Maryland, College Park. He was responsible for launching and mentoring startups from university intellectual property with faculty and students and helped launch seven. He also ran the Chesapeake Bay Seed Capital Fund for the state of Maryland investing in innovative clean tech startups.

Jim previously held the role of Director of New Business Development doing M&A for the Corporate Executive Board, a best practices syndicated research firm serving the world's leading corporations and not-for-profit institutions.

Prior to the Corporate Executive Board, he was vice president of Intervale Capital (formerly Cherington Capital), a private equity firm investing in middle-market manufacturing and service businesses in the oil and gas industry.

He spent 5 years prior to Intervale in venture capital, most recently at incTANK Ventures, an early stage venture capital firm, as managing director. He has experience leading or co-leading investments into medical device, software, and information technology companies, including AgaMatrix and Nexaweb.

Before entering the private sector, he was an academic researcher at a number of institutions, including Harvard, MIT and the University of Tokyo.

Financial Projections

Yapper was established as an LLC in June 2013. Since then, Yapper has bootstrapped an MVP and within 6 weeks since launch in the iOS App Store has been able to grow to 1,300 users (*Exhibit 4A*). Out of the nearly \$24,000 spent by the company since June 2013, \$21,000 or 88% of the funds have gone towards developing an iOS MVP and its subsequent three iterations. More specifically in 2013, \$11,500 went to salary for Yapper’s developer, \$1,375 went towards buying promotional materials for parties and events, and \$700 towards website costs, tax and LLC ID’s, registration and applications, recruiting, and other general and administrative costs. In 2014, Yapper has spent

CONFIDENTIAL

\$9,500 on its developer's salary, \$225 towards marketing, \$440 for technology back end support, and little if anything to date on general and administrative costs. (*Exhibit 9A*)

While Yapper is following the lean startup methodology, the company is actively seeking funding in order to continue operations in 2014. Estimated operating costs for the next 9 months total \$200,000. Of that, \$97,250 will be allocated to technical development, \$73,000 to operating costs and product development, \$20,000 will be used for marketing, and \$9,750 will go towards general and administrative costs which includes offices space, travel, and miscellaneous. (*Exhibit 9A*) A comprehensive explanation of this round of funding can be found in **Appendix B – Information on Yapper's Convertible Note**.

In 2015, Yapper expects to incur operating costs of \$800,000 with a similar breakdown of distribution. Specifically, \$470,000 will be allocated to technical development, \$240,000 will be spent on operating costs (*including executive salaries*), \$60,000 on marketing expenses, and \$90,000 will be spent on G&A expenses. (*Exhibit 9A*)

In order to maintain this business model and operate with positive cash flows by early 2016, Yapper will need to seek both Family and Friends funding by June 2014 and secure a Seed Round of investments by early 2015. Yapper plans on securing this funding during their Validation Stage, as discussed in the *Operating Plan* of this Business Plan. Upon entrance into its Growth Stage, Yapper will plan to implement a revenue structure and will seek a Series A round of investment.

Yapper has recently gained notoriety by winning \$20,000 in cash and in-kind prizes at the GWU Business Plan competition and was voted DC's Hottest Showcasing Startup by TechCocktail.¹³ Yapper has used this momentum to begin speaking with potential investors about raising a round of investment that will be in the form of a Convertible Note. This investment, which is explained in further detail in **Appendix B – Information on Yapper's Convertible Note**, will provide enough funding to support the company until they raise a Seed round of funding. Further, Yapper has advanced in several competitions, has been approached by business partners, deal brokers, and continues to hear about the potential of the idea and product roadmap that has already been developed. With forecasts of 16,000 users by the end of 2014 (*Exhibit 8A*) in only a couple highly population dense, young, and tech savvy markets, the Yapper team has begun communication with investors that see a strong and experienced team with a great MVP. After Yapper secures funding, and with its team's track record of execution, the company projects that it can build and market a profitable product to over 500,000 users by 2016 (*Exhibit 8A*).

With the initial investment, the Yapper team believes that they can continue growing at a pace above industry average. The Family and Friends investment would go towards product development, marketing for exponential growth, entering new markets and enticing local businesses to promote their deals in markets that are already saturated by

¹³ <http://tech.co/macaw-yapperapp-win-dcs-hottest-showcasing-startups-2014-02>

CONFIDENTIAL

Yapper users. Early 2014 has been Yapper's Validation Stage, concentrating on users and not businesses, but by adding *Promoted Yapps* the company will be preparing its platform for a sustainable revenue model and business portal integration in 2015. Yapper plans to use part of the investment to encourage businesses to pay for Promoted Yapps to allow for the constant promotion of deals to all Yapper users nearby.

Yapper plans to start selling promoted chat titles in 2015 with expectations of entering 3 markets in 2015 with an average of 10 neighborhoods per market (*Exhibit 7A*). The company expects to promote one deal per neighborhood per day per market for an average cost of \$19.70 per deal (*Exhibit 6A*). A breakdown of this average cost is based on the duration and distance of the promoted chat title, as determined by Yapper's client. For instance, Yapper would provide a 5-block, 30 minute deal for free (as is on the app already), but an increase in the time to 1 hour would cost \$1.00, an increase to 3 hours would cost \$2.50, etc. Similarly, if the distance is not far enough, Yapper's client could opt to pay an additional fee to increase the radius of their Promoted Yapp. The exact pay structures are outlined in *Exhibit 5A*. In order to average this cost, the Yapper team allotted percentages to each additional cost based on projections of anticipated demand (*Exhibit 6A*). The \$19.70 cost per Promoted Yapp multiplied by 3 markets and by 10 neighborhoods per market for 365 days in 2015 gives Yapper Total Revenue of approximately \$219,000 in 2015 (*Exhibit 7A*).

This strategy will allow businesses to use data analytics and target marketing to increase the probability of a nearby customer using real-time deals based on actual location. The business can either send notification or target their advertisement based on demographic information, keywords, or behavioral history that Yapper will collect as first-party data and incorporate in its revenue-generating business portal. A portion of the \$800,000 seed round will go towards mastering this revenue model, building out the back-end technology, and selling it to businesses (*Exhibit 9A*).

Additional Information

With this Business Plan, the Yapper team asks that any interested party contact the management team at YAPPERapp@gmail.com. Yapper is actively seeking investments in the form of a convertible note for equity in the company, as described herein, and welcomes any inquiries, feedback, or investment opportunities.

Appendix A – Business Plan Exhibits

Exhibit 1A – Competitive Landscape

Features	Yapper	Highlight	SnapChat	Circle	NextDoor	Whatsapp	Twitter	Facebook	FourSquare
Public Messaging	Yes	No	No	No	No	No	Yes	Yes	Yes
Private Messaging	Yes	Yes	Yes	No	Yes	Yes	Yes	Yes	No
Auto Deletion	Yes	No	Yes	No	No	No	No	No	No
Location	Yes	Yes	No	Yes	Yes	No	No	No	Yes
Location Privacy	Yes	No	Yes	Yes	Yes	Yes	No	No	No
Profile Privacy	Yes	No	No	Yes	Yes	No	No	No	No

Exhibit 2A – Direct Competitors: Location-based Messaging Apps

Direct Competitors - Location Based Messaging Apps:

Company Name	Year Founded	Information
Highlight	2011	Highlight is a mobile ambient awareness app. If someone standing near you also has a Highlight app who is your Facebook friend or that you have friends or interests in common with, Highlight sends you a push notification and lets you message them. Highlight shows you hidden connections and lets you see the person's profile information (name, photos, mutual friends, interests)
WhosHere	2008	WhosHere is a location-aware social proximity networking application that allows users to find other users with similar interests and connect with them real-time via free text, image messages and free VoIP calls without disclosing any personal information.
Sonar	2010 - closed down September 17, 2013	Sonar is a location-aware social proximity networking application that shows you how you are connected to the other people in the room. Sonar combines publicly available profile and location information to help you discover business contacts, colleagues, old friends and new ones at conferences, cafes, and bars. Sonar enables you take your online identity offline, to help you meet real people, in the real world.
Magnet	2012	Magnet helps you discover your friends who are nearby-- at concerts, games, beaches, or just in the neighborhood! Message the friends around you and pick a place to meet in the middle.
Social Radar	2013	Social Radar combines the power of your smartphone's location with your social network – allowing you to walk into a room and already be aware of the people around you and how you are connected to them.
AppHere	2013	AppHere is a venue-based instant social network application, where people can join an instant network based on their location and interact with others who are at the same place.
Circle	2010	Circle is a location-aware social proximity networking application that answers the question “Who’s Around You?.” Circle notifies you when your friends and networks (college, work, hometown, professional group, etc.) are nearby, wherever you are, no matter where you go.
BuzzMob	2010	BuzzMob is a location-aware social proximity networking application that connects with your current location and puts you in touch with the people around you in a real-time, live community. By joining GPS-defined ‘Rings’ in the smartphone app, BuzzMobbers within the same location are instantly connected, to talk; share tips, photos, and media; and receive exclusive content from within a digital network.
Gauss	2011	Gauss is a location-aware social proximity networking application that gives you the ability to uncover the interesting hidden connections to the people around you right now.

Exhibit 3A – Indirect Competitors

Location Based Apps for Romantic Endeavors:

Company Name	Year Founded	Information
Hinge	2011	Hinge is a mobile app that uses Facebook to help young people meet dates through their friends. Users log in and rate a daily batch of their friends’ friends on a scale of 1-5. Anytime there is mutual interest, Hinge makes a content-rich intro derived from each user’s Facebook profile.
Tinder	2012	Tinder finds out who likes you nearby and connects you with them if you’re also interested.

CONFIDENTIAL

Social Media Platforms to Communicate with the General Public:

Company Name	Year Founded	Information
Twitter	2006	Twitter is a global real-time communications platform with 400 million monthly visitors to twitter.com, more than 200 million monthly active users around the world.
Banjo	2011	Banjo provides real time content discovery by location across multiple social networks. From a mobile device, Banjo brings the experience of being anywhere in the world through the eyes of the people who are there
Foursquare	2009	Foursquare is a geographical location based social network that incorporates gaming elements. Users share their location with friends by “checking in” via a smartphone app or by text message. Points are awarded for checking in at various venues. Users can connect their Foursquare accounts to their Twitter and Facebook accounts. By checking in a certain number of times, or in different locations, users can collect virtual badges.

Traditional Messaging Apps:

Company Name	Year Founded	Information
Snapchat	2011	Snapchat is real-time picture chatting application, where you can control how long your friends can view your message by setting the timer up to ten seconds and send. Once the picture is viewed for the specified duration, the message and picture disappears forever. The sender will be notified if a screenshot is taken.
WhatsApp	2009	WhatsApp Messenger is a cross-platform mobile messaging app which allows you to exchange messages without having to pay for SMS. In addition to basic messaging iPhone, Android and BlackBerry WhatsApp Messenger users can send each other unlimited images, video and audio media messages.
BBMs	2002	BBM is a instant messenger application included on BlackBerry devices that allow messaging between BlackBerry users. Ther service will soon be available on Android and iOS
Texting (SMS)	1985	SMS is a text messaging service component of phone, web, or mobile communication systems. It uses standardized communications protocols to allow fixed line or mobile phone devices to exchange short text messages
Google Talk	2005	Google Talk is an instant messaging service that provides both text and voice communication
Facebook Messenger	2004	Facebook Messenger is an instant messaging service and software application provides text and voice communication with your Facebook friends

Appendix B – Information on Yapper’s Convertible Note

This appendix is not meant to replace any outside due diligence. Different types of investments can be confusing, so this information is attempting to explain why Yapper has chosen to raise their first round of financing through Convertible Notes.

Background

The Yapper team is actively seeking a “Friends and Family round” of investment. We have identified that we need to raise \$200,000 in order to operate for the next 9 months, starting June 1, 2014. After the 9 months, we will look to raise a Seed round of financing from Venture Capitalists and early-stage investors. This Friends and Family round *is not* meant to grow the company to the point where it is self-sustaining after nine months. In fact, most tech startups need to raise at least three rounds of financing before they become profitable. Here are examples of a few companies at different stages of operation:

Company	Logo	Initial Financing	Series A	Series B	Other	Total	Valuation/ Acquisition
YikYak		\$20K	\$ -	\$ -	\$ -	\$20K	\$ -
Yapper		\$30K	\$ -	\$ -	\$ -	\$30K	\$ -
Banter		\$800K	\$ -	\$ -	\$ -	\$800K	\$ -
Highlight		\$ -	\$4M	\$ -	\$ -	\$4M	\$ -
Circle		\$1M	\$5M	\$ -	\$ -	\$6M	\$35M

Facebook		\$500K	\$12.7M	\$27.5M	\$2.29B	\$2.33B	\$104B

This round *is* meant to create a Product/Market Fit by scaling to new markets and iterating the product based on customer feedback. We are asking for enough capital to get us to operate for the next 9 months, at which time we will seek a professional investment from a Venture Capitalist firm or angel investor.

Early-stage investments, such as this one, are typically issued *Convertible Notes* because there is so much volatility at this stage. Any investment made during the Friends and Family round will be incentivized for the increased risk based on the following terms.

What is a Convertible Note?

A convertible note is short-term debt that converts into equity. In the context of a Friends and Family financing, the debt typically automatically converts into shares of participating preferred stock upon the closing of the next round of financing. In other words, investors loan money to a startup as its first round of funding; and then rather than get their money back with interest, the

CONFIDENTIAL

investors receive shares of participating preferred stock as part of the startup's initial preferred stock financing, based on the terms of the note.¹⁴

Again, What is a Convertible Note?

In more basic terms, a Convertible Note is a way that Yapper can secure early-round funding with limited risk (in our opinion) on the investor. If an investor wants to invest \$100,000.00 into Yapper, we could inject that money into the company and issue a \$100,000.00 Convertible Note which will convert into equity as soon as we raise a Seed round of funding.

It's not intentional to be vague when describing 'will convert to equity as soon as we raise a Seed round of funding', but the fact is that there are a lot of moving parts. We will attempt to explain things in a general way, but we strongly advise that any investor do their own due diligence on Convertible Notes as they specifically relate to our terms.

In addition to the equity conversion, all terms of the agreement are set at the time of the next round of funding including liquidation preferences, voting rights, and conversion factors. This is favorable to you because your terms will be negotiated by a professional investor who will be seeking favorable terms.

What is the 'conversion' rate of the Convertible Note?

In general, the investor will get a percent equity stake in the company based on the amount that they invest (let's say \$100,000.00) divided by the valuation of a Seed round of financing (let's say \$2,200,000) times a discount rate that is offered as part of the Convertible Note to further limit the liability on the investor (which Yapper set to 20%).

$$100,000 / ((2,200,000) * (.8)) = 5.68\% \text{ equity in Yapper}$$

Let's identify the moving parts here:

Investment: The \$100,000.00 is a placeholder for the amount of money that the investor decides to put into Yapper. If the investor decides on investing \$10,000.00 at the same valuation, they would own 0.568% of the company after Yapper secures a Seed round.

Valuation: The \$2.2M valuation is a **hypothetical** benchmark that the Yapper Team has chosen to use based on extensive industry research, conservative forecasting, and discussions with Venture Capitalists. Obviously, Yapper could close a Seed round that is higher or lower than that, which will affect the value of the Convertible Note accordingly. Let's say, for example, that Yapper raises a Seed round of \$500,000 at a \$3,000,000.00 valuation. If the initial investment stays the same (\$100,000.00), the Convertible Note will now convert into a 4.17% equity stake in the company instead of a 5.68% equity stake $((100,000 / (3,000,000 * .8))$. While the equity stake dropped from the previous example, the company's valuation increased which makes each percent of ownership of the company more valuable.

Discount Rate: The Discount Rate of 20% is a fixed rate and will not change. This is included in our offering to incentivize the investors who participate in this round, as it is understood that early stage investments are riskier than later stage investments.

Investment Ceiling: A ceiling is set on the Convertible Note to protect investors from a huge valuation in the Seed round. Yapper set the ceiling at \$4,000,000.00, which means that even if

¹⁴ <http://techcrunch.com/2012/04/07/convertible-note-seed-financings/>

CONFIDENTIAL

Yapper secures a Seed round of greater than \$4,000,000.00, the valuation for the Convertible Note can never go above the \$4,000,000.00 ceiling.

What happens if Yapper doesn't raise a Seed round of financing?

In the event that Yapper does not raise an additional round of financing, there will be no market valuation for the company and the Convertible Note will not convert into Equity. This is unlikely; as we mentioned before, the money that will be raised in the Friends and Family round will last 9-months, at which time Yapper will need to raise a Seed round. Even still, here are the three scenarios that could arise under this unlikely circumstance.

Investment Paid Plus Interest: The terms of a Convertible Note state that if the company does not secure a future round of financing, the company will be responsible for paying back all initial investments plus interest as soon as the maturity date is reached. Yapper set the maturity date at 2 years and the interest rate at 8% (per annum), so if an investor decides to invest \$100,000.00 on June 1, 2014 and Yapper never secures funding, then by May 31, 2016 Yapper will owe that investor \$116,640.00.

Acquisition: If the company gets acquired before securing a future round of investment, then all investors with Convertible Notes will be paid 1.75 times the principle and interest. Therefore, if an investor decides to invest \$100,000.00 six months before Yapper is acquired, then they will be paid \$175,000 from the acquisition.

Bankruptcy: While the Yapper team feels that it is *highly unlikely* that the company will become bankrupt before securing a future round of financing, it should be noted that in the event that the company goes bankrupt, the company will liquidate all of their assets in order to repay their investors as best as they can. Yapper would no longer be legally liable to repay \$233,280 (round plus interest) to their Friends and Family investors in the case of bankruptcy. However, the founding team would feel morally obligated to pay back initial investment in a timely manner with individual funds. While we think that this scenario is *highly unlikely*, we are confident that there will **never** be a situation where this debt goes unpaid.

CONFIDENTIAL

Four Qualitative Scenarios based on Yapper's proposed Convertible Note

	Continued Business	Discontinued Business
Future Investment	<p>See: Conversion Rate If Yapper raises a Seed round, the Friends and Family round will convert to equity in the company.</p> <p>Example: \$100,000 investment \$2.2M Seed Round Valuation (<i>HYPOTHETICAL</i>) 20% Discount Rate</p> <p>The initial investment would convert to 5.68% equity in Yapper $100,000 / (2,200,000 * 0.80)$</p>	<p>See: Conversion Rate If Yapper raises a Seed round, the Friends and Family round will convert to equity in the company.</p> <p>Afterwards, if Yapper discontinues operations, the company will liquidate all assets and investors will be compensated based on their ownership stake in the company.</p>
No Future Investment	<p>See: Investment Paid Plus Interest If Yapper doesn't raise a Seed round but continues to function as a company, the investors will be paid based on their Investment plus 8% interest.</p> <p>Example: \$100,000 investment on June 1, 2014 8% Interest Rate 2-year Maturity Date</p> <p>On May 30, 2016 Yapper will owe this investor \$116,640.00 $(100,000 * (1.08)^2)$</p>	<p>See: Acquisition or Bankruptcy If Yapper doesn't raise a Seed round and discontinues business, the company would have either been acquired or went bankrupt. If acquired, the investor will be paid 1.75X initial investment. If bankrupt, Yapper will liquidate all assets and repay investors based on the terms outlined in the Convertible Note.</p> <p>Acquisition Example: \$100,000 investment 1.75 times acquisition multiple</p> <p>After acquisition, the investor will be paid \$175,000 $(100,000 * (1.75))$</p>

Family and Friends Expenses (9 month projections)

Account	Expense (9 months)	Comments
Rob's Salary	\$ 31,500.00	Based on a \$42,000/year salary, with \$1,750 paid every two weeks, to drive product development for the company. Rob has 30.66% equity in the company.
Justin's Salary	\$ 31,500.00	Based on a \$42,000/year salary, with \$1,750 paid every two weeks, to drive daily operations for the company. Justin has 30.66% equity in the company.
Total Salary Expense	\$ 63,000.00	Two executive-level salaries for a 9-month period
Anthony's Salary	\$ 36,000.00	Based on a \$48,000/year salary, with \$2,000 paid every two weeks, for the technical development of the app. Anthony also has 8% equity in the company, so his salary will be way below industry standard.
Fourth Tech Guy's Salary	\$ 56,250.00	Based on a \$75,000/year salary which is industry standard. This independent contractor will not have equity in the company.
Technology Costs (Parse & Quickblox)	\$ 5,000.00	Current cost of technology for our back-end server (Parse) and our chat plug-in (Quickblox). We are paying \$220/mo right now but anticipate to pay \$650-\$850/mo as we scale.
Total Technology Expenses	\$ 97,250.00	Two technical developer's salaries plus misc. technical costs
Marketing	\$ 30,000.00	Campus Reps, Travel, Events, Press, Social Media, and Company Swag
Miscellaneous	\$ 9,750.00	Buffer for miscellaneous expenses
Total Friends & Family Round	\$ 200,000.00	Amount needed from Friends and Family Round to run operations for 9 months starting June 1, 2014

Other Comments	Dane's Salary	Dane, Yapper's third cofounder and owner of the remaining 30.66% of the company, will transition to a part-time role in the company starting June 1, 2014 and will not take a salary. This decision was difficult, but the Yapper Team feels that our resources are best used to bring on technical talent at this time.
	Android Version	After extensive research, we have decided to wait on developing an Android Version of the product until we find a Product/Market Fit. We are continually iterating the product to create a version that is scalable, and we feel that building an Android version at this time and changing two versions of the same app will be too resource intensive. Also, holding off on Android development could generate buzz and hype if we scale quickly on iPhone.
	Intellectual Property	The research shows that protecting smartphone applications is difficult and typically happens during later stages of development. There is no need to file for patents at this stage.
	Office Space	Yapper recently won 6 months of free office space at the longest-standing coworking space in DC, Affinity Labs! Our entire team will be working out of this space <i>for free</i> for 6 months. Since this Friends and Family round is projected to last 9 months, we have agreed to take the cost of the remaining 3 months of office space out of 'Miscellaneous Expenses'.

Appendix C – Yapper’s Meeting Log

yAPPer Meeting Log

Today 3/21/14

Number of Meetings	
Number of Meetings this Month	26
Total Meetings	236

Time Involved in Meetings	
Amount of Hours in Meetings this Month	50.5
Total Amount of Hours in Meetings	393 Hour(s)

Time Period 2013

Date	Topic of Meeting	Location	Time (Hrs)	yAPPer Members Present	Guests	Comments
4/10/13	Sea Creation	Rob's Rooftop	1 Hour(s)	Dane, Justin, Rob		Started brainstorming the idea
4/22/13	yAPPer Exec Meeting	Duques	2.5 Hour(s)	Dane, Justin, Rob		Minutes are on Dropbox
4/29/13	Names Selection	Via Text	3 Hour(s)	Dane, Justin, Rob		Started brainstorming name ideas
6/8/13	Fueled Conference Call	Duques	1 Hour(s)	Dane, Justin, Rob		Conference call with App Developer "Fueled"
6/28/13	Pitch to Classmates	Duques	3 Hour(s)	Dane, Justin, Rob	[Fill this in]	Pitched the idea to 9 GW MBA students and asked for feedback
7/10/13	Social Cubx Discovery Call	Duques	1 Hour(s)	Justin	Eric Banks	Outsource development to Pakistan and can pay less than \$25/hr
7/10/13	GW Entrepreneurship	K street	1 Hour(s)	Justin	Jim Chung	How GW can help, and contacts for us. Put us in touch with Thor E.
7/11/13	App Partner Call	Duques	1 Hour(s)	Justin	Drew Johnson	Based out of NY, could develop app for under \$0k. (1570-580)hr
7/12/13	Savvy Apps Call	Justin's apt.	1.5 Hour(s)	Justin	Ken Yarmush	Excellent developer with good ideas, very expensive. (150-200k)
7/14/13	yAPPer Exec Meeting	Dane's House	2 Hour(s)	Dane, Justin, Rob		Minutes are on Dropbox
7/15/13	Apollo Matrix	1410 Q street	1.5 Hour(s)	Justin	Pete Johnson	Really like and could do app for under \$0k. Based in DC.
7/16/13	Thor Erntsson Call	On Bus	0.5 Hour(s)	Justin	Thor Erntsson	Skeptical about our idea and what sets it apart from others.
7/17/13	VIP Event	Loeb & Loeb	3 Hour(s)	Justin	Lloyd Rothenberg	Two people to send exec summary to for possible funding
7/22/13	Savvy Apps Call	Duques	1 Hour(s)	Justin, Dane	Ken Yarmush	Pricing outline and explanation of services provided
