- **Print directly onto compatible CDs and DVDs**

*On suitable media **Please check compatible product list on your local EPSON website

EPSON[®] STYLUS[™] PHOTO R300

The EPSON Stylus Photo R300 is the total photo printing solution that all digital camera users have been waiting for. It combines the quality of EPSON's superb 6-colour photo imaging system with the flexibility of printing directly from digital cameras, memory cards and even wireless devices. Now you can produce amazing, long lasting photos at an outstanding resolution of up to 5760 optimised dpi* - simply, effectively and without even using a computer.

PREMIUM QUALITY PHOTO PRINTING FOR MEMORIES THAT LAST

No-compromise photo quality

Newly formulated inks and an improved EPSON Micro Piezo™ print head make it even easier to produce photos that look better and last longer than ever. The higher definition achieved by a smaller 3pl droplet size, combined with the wider colour range of 6-colour inks, produces true photo lab quality. What's more, the 6 inks are contained in separate cartridges for added economy – now you only need to change the colour that runs out.

Digital photo printing versatility

Amazing results are achieved with ease and at impressive speeds, on a range of media - from borderless 10 x 15cm photos to A4 enlargements. You can even print your own designs on to CD inlay cards and directly onto the face of printable CDs** - via the easy access CD print tray, and all this can be achieved in standalone mode.

Built for digital cameras

A PC isn't required for great photos, because the EPSON Stylus Photo R300 supports a wide range of memory cards. You can also print directly from digital cameras via PictBridge or USB DIRECT-PRINT**, and archiving is easy, because images can be saved to and printed from compatible CD-R and Zip® drives** at the touch of a button.

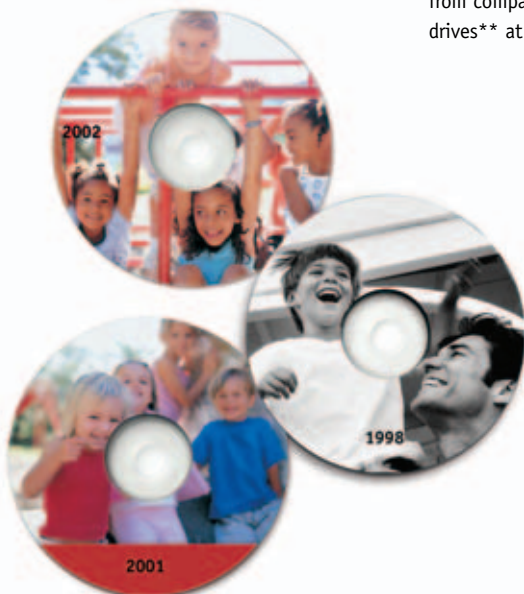

Simple, effective photographic control

The EPSON Stylus Photo R300 offers extensive standalone printing functionality, which is easily controlled via the built-in LCD screen. An optional 2.5" colour preview monitor is also available, providing enhanced photo previewing and selection features and making it even easier to produce outstanding photos without the need for a computer.

Perfect results – whatever your subject

With EPSON PRINT Image Matching™ II support, the EPSON Stylus Photo R300 maximises photo quality by ensuring printer settings are matched to those of your digital camera, when the photo was taken. Flexibility is enhanced further with Traditional and Vivid colour settings which optimise skin tones and scenic shots.

*On suitable media

**For more information and for compatible product lists please visit your local EPSON website

Simple, fast, USB connectivity

Connecting the EPSON Stylus Photo R300 is quick and easy with two standard USB interfaces, one of which is positioned on the front of the printer for even simpler access. So while the rear slot can be connected to a computer or another permanent USB device, the front slot can be easily accessed for more frequent, temporary connections to cameras or external disk drives.

Optional Bluetooth® connectivity

For added simplicity and flexibility, the optional Bluetooth® adapter enables you to print photos from a range of compatible wireless devices** including cameras, notebook PCs and mobile phones.

There's even a Small Image Enhancer which creates high quality photos from low resolution sources such as mobile phones.

Software to make great photos even better

Printing, improving and adding a personal touch to your photos, is simple with the latest versions of EPSON's photo printing and editing software. EPSON PhotoQuicker 3.5 makes it easy to enhance and add effects, and with EPSON PRINT Image Framer** you can apply layouts and frames and add that creative difference to your images.

Key Features:

- Produce premium quality photos at up to 5760 optimised dpi*
- EPSON 6 colour inks for exceptional, highly durable photo results
- Individual 'Intelligence' ink cartridges for added control and economy
- Borderless printing up to A4 size – for lab-style photos

Print Speeds Note:

Print times will vary depending on computer configuration, print setting, application, coverage and page complexity.

The print times shown in this brochure are the average time for multiple prints of the same page over one minute. Times are measured from the 'Print' command to the delivery of the page in the tray. The speeds were achieved using the following system: 200MHz Pentium PC, 64MB RAM, 2GB HDD, Windows® 95 or 98.
