

# IRRICAD PRO 13

## IRRICAD'S LATEST UPGRADE IS HERE!

- Multi-step “undo” and “redo”
- Single-file saving for easy design sharing
- Improved flushing calculations and reports
- New design process workflow
- New Geo-Tiff and GIS import tools
- Tree block tool
- Polygon seed tool
- Show area tool

**IRRICAD Pro 13** is the latest major release of IRRICAD — the leading irrigation design platform. We've worked hard to bring you a range of new functionality and user experience improvements. Also, a reminder that when you purchase **IRRICAD Pro 13** you will continue to receive free priority support and patch releases for 12 months as well as 2 hours of one-to-one online training to help you make the most of the new features (conditions apply).

#### **MULTI-STEP UNDO AND REDO**

- If you have mistakenly performed an action, you can use Undo to reverse that action, right back to when the design was last opened.
- IRRICAD Undo retains all addition, deletion and modification actions for drawing and hydraulic entities.

#### **SINGLE FILE SAVING**

- IRRICAD designs are now contained in a single \*.dez file. This is a ZIP compressed archive which is automatically uncompressed when a design is opened. The new file format makes sharing and files management much easier.

#### **IMPROVED FLUSHING CALCULATIONS & REPORTS**

- IRRICAD now uses valve pressure to calculate and report what is actually happening under these conditions
- Zone flushing report: Extensive hydraulic reporting for tapes under flushing, based on valve pressure
- Flush ID Keyword for labelling plan:

#### **NEW DESIGN PROCESS WORKFLOW**

- Zone design is now completed before the Management process to better align with traditional design workflow and ensure actual flows are used in the Management process.

#### **TREE BLOCK TOOL**

Rapid tree block layout with auto-spacing and tree counts.

#### **GEO-TIFF IMPORTING & GIS IMPORT OPTIONS**

- Geo-Tiff images are able to be imported directly, correctly scaled, to their world coordinates.

#### **ALSO INCLUDED**

- **Polygon seed tool** allows users to easily create a single object from regions defined by multiple objects.
- **Show area tool** quickly displays the internal area of regions defined by multiple objects.
- **Current drawing properties toolbar** for quick editing.
- **Second label set** allows users to display, and toggle between, two separate sets of label properties on their design.
- **New label keywords** including listing fittings and subcomponents as an easy reference for installation.

#### **MORE INFORMATION**

You can read more on changes and new features in Version 13 in the [Recent Developments](#) on our website, [www.irricad.com](http://www.irricad.com).

#### **IRRICAD PRO DESIGN SOFTWARE**

\$3,995

#### **UPGRADE PRICING**

Upgrade pricing from previous versions as below

Version 12	Version 11	Version 9.5/10/10.5	Version 8/9
\$650	\$995	\$1,395	\$1,995
