Supplier Procurement Survey

Dear Supplier,

As part of our efforts to provide quality products and materials to our valued customers, our quality systems must be fully compliant with ISO 9001:2000. As a result, we have adopted a vendor evaluation, which includes completion of the attached survey.

The enclosed Supplier Quality Survey is to be completed and returned to the person/address shown below within 30 days of receipt.

In addition to this survey, new suppliers must provide to Oseco a current copy of the EICC (Electronic Industry Citizenship Coalition) Conflict Minerals Reporting Template. The template identifies the name and location of the smelter used for the "Conflict Materials". The template can be obtained at www.conflictreesmelter.org. The supplier must update EICC reporting template and provide an updated copy to Oseco when any new smelter supplier is added to their supply base.

These are requirements of our quality system. Quality Assurance, Purchasing or any other group or entity involved with outside suppliers will conduct these surveys periodically, as determined to be necessary. Completion of this survey and the Conflict Minerals template is a requirement for vendors to remain on Oseco's Approved Supplier List.

Some questions may not pertain to your facility. Where applicable, write comments or other process information as it pertains to orders placed by Oseco, Inc. Please be as informative and complete as possible with your comments.

Your cooperation is greatly appreciated.
