**NAME:** \_\_\_\_\_

Home town/High School: \_\_\_\_\_

What is your background in biology? Marine biology?

Have you taken summer courses or had other field or research experience? (what, where, when?)

Are there any health or other physical issues that might affect your ability to do moderately strenuous fieldwork (climbing around on rocks, carrying buckets of water)? (These do not disqualify you from full participation in the course; it will just be helpful to everyone if I know in advance. Food allergies and other dietary limitations are readily accommodated at SML with advance notice.)

What area of biology, or group of organisms, do you know the most about – and how did you acquire that knowledge?

What do you consider your strongest skills, academically and otherwise?

What do you want to learn – during Marine Immersion, and more generally?

What is your greatest concern about this class?

What would you like to be able to say about Marine Immersion at the end of the course?

What are you reading right now (or what is the last book you read)? What do you want to read next? (not necessarily science books!)

What is a specific thing that your good friends know about you, but that someone meeting you for the first time would not necessarily realize right away? (something you don't mind sharing – I need this info for a trivia game....)

Anything else you'd like us to know up front:
