PERIODONTAL EVALUATION

CHART #: _____ DATE: _____

PATIENT'S NAME: _____

- ❑ **CASE TYPE I GINGIVITIS:** Inflammation of the gingiva, characterized clinically by gingival hyperplasia, edema, retractability, gingival pocket formation, pocket depth less than 4 mm and no bone loss.
- ❑ **CASE TYPE II GINGIVITIS:** Progression of gingival inflammation into the alveolar bone crest. Early bone loss with moderate pocket formation (4 to 5 mm).
- ❑ **CASE TYPE III MODERATE PERIODONTITIS:** A more advanced state of the previous condition, with an increased destruction of periodontal structure associated with moderate-to-severe bone loss and tooth mobility.
- ❑ **CASE TYPE IV ADVANCED PERIODONTITIS:** Further progression of periodontis with severe destruction of the periodontal structures, with increased pocket depth, usually greater than 7 to 8 mm with increased tooth mobility.

Mobility: Slight=I Moderate=II Severe=III

Treatment Plan

(check appropriate quadrants)

	UR	UL	LR	LL
Subgingival Curettage				
Gingivectomy				
Osseous Mucogingival				

- ❑ Periodontal Referral to _____
- ❑ Patient refused to have additional periodontal treatment performed or go to a specialist.

Patient's Signature _____

Examined by: _____
