Scope of “7th International Symposium on Nanomedicine (ISNM2013)”

The combination of top-down and bottom-up nanotechnologies evoked a real revolution in various fields of science and technology. Medical treatment is one of the promising fields where we will find important applications of this new technology. Once recognized, we can expect these new technologies to be used for developing novel devices or methods for treatment of cancer, neurodegenerative diseases and many other intractable diseases.

The aims of this Symposium are (1) to provide a platform on which to discuss the future prospects for these science-technologies and construct an international human network in the fields of Nano-Bio-Medicine and (2) to foster excellent young generation researchers in these fields based on this network. We take it especially important to construct an Asian network and invite several speakers in the related fields from these countries. The keywords of the Symposium are cancer, molecular imaging, drug delivery, regenerative medicine, neurodegenerative disease and other nanomedicine topics.

The 7th Symposium is arranged by Prof. Shigeori Takenaka of Kyushu Institute of Technology - the host university. And also the special session “Brain nanomedicine,” is arranged by Prof. Tsuneo Urisu of Japan Nanomedicine Society.
