

Form Foundry Software

Electronic Forms Software Solution
By **Competira Software Solutions, LLC**

Simplifying Your Business Forms & Data Collection

Technology at work for you

Form Foundry Software Solution

The Form Foundry Software suite will satisfy your electronic forms and data collection needs and then some! This software suite will allow you to create and add intelligence to your forms with enabling to send them to both the web and to your desktop users. This software will allow your filled-in forms to be submitted and delivered to where they need to go with the data that you specify. No interaction from the person filling in the form required. This software suite holds capabilities not found in ANY electronic forms solution software in use today. It provides you with a leading technology edge for form authentication and data validation. All aspects of your business stand to benefit.

flexible solutions for your business needs

MULTI PLATFORM ENVIRONMENT FROM ONE FORM FILE

Form Foundry Creator Software

This software program will allow you, the author, to create a form from scratch or import a pre-existing form. Simply edit the form characteristics and elements. After completing the form design, you're ready to start adding the intelligence and enhanced features to the form that meet your requirements. Software features you'll value include:

- **Automatic Form Routing (Chain Forms Feature).** Meets the need for forms requiring multiple-user input and signatures or authorization. Forms will automatically direct to all intended recipients.
- **Data Validation with Input and Output Masks.** Guarantees that the data entered in your forms is correct!
- **Barcode Support.** Output your data to over 90+ Barcode Symbologies. These could include both 1D Linear and 2D (PDF4127 / Data Matrix) Barcode Symbology types for example.
- **Access Restrictors.** Tagging your forms restricts access. Exercise managed control among departments or individuals by allowing only those you name to see and access forms.
- **Due Date Reminder.** You can specify forms to be required by certain dates, which the form server can then pole the system, find out who has not submitted the form yet, and then just send them an email reminder to do so.
- **One Form-File Creation.** One file created and rendered for both the web and desktop pc environments. NO MORE HTML programming for your forms!
- **Submitted Data Handling.** The software will accept submitted form data and automatically send it to your SQL database, output it to an XML file, output an ASCII delimited file, or ALL of the above. Your file(s) will easily and automatically attach to an e-mail for delivery to a predetermined list of recipients if you choose.

Form Foundry Software Suite

DATA VALIDATION & FRAUD PROTECTION

One inherent problem with electronic forms today involves validating form data that an end-user filled-in. Usually at some point in time, the form in question needs to be printed. When a user prints out the form in hard copy format, it's really a COPY of the ORIGINAL ELECTRONIC FORM submitted. In today's world, there's no such thing as an original electronic form. Adobe PDF files and other similar form files amount to nothing more than a form that gets distributed by repeated copies. In some cases the user fills the form out on the web and hits the submit button. Anyone receiving that data has no way of validating its origin, knowing who supplied it, or knowing if the data is correct.

The security element of the Form Foundry Software Suite will remedy this problem. This solution will provide you with the assurance that data received is indeed correct and authentic. Whether you're receiving an actual electronic form or a printed hard copy, it's 100% verifiable. And that's with or without using digital signatures.

NEW DIGITAL PRINTER TECHNOLOGY

When a user requests a form, the Digital Printer feature of the Form Foundry Forms Server will generate an ORIGINAL electronic form from the Master Project file. If the security feature has been enabled for this form, the Digital Printer will add the security feature to it. Thereafter, the form becomes traceable and allows automatic authentication and data validation for both the electronic form itself or the printed form submitted. Today, we have the only electronic forms software package that allows the users and data receivers to authenticate a printed hard copy and confirm all data unaltered. We achieve this by linking a printed hard copy to the original electronic form. This advanced technology exceeds what's currently available. Competing software can't protect against alterations made to a printed page even with a digital signature.

- Guaranteed Data Protection & Authentication
- Data Security with Password and 256 bit Data Encryption Protection
- Time Saving By Designing 1 Form For Both the Web & Desktop Platforms
- Forms Automation Features
- Forms Administration Features
- Forms Server with Forms Management Control
- The MOST COMPREHENSIVE FORMS PACKAGE AVAILABLE TODAY!

Simplifying Your Business Forms & Data Collection

Form Foundry – Electronic Forms Software Suite

Implementing this software package will simplify every aspect of your Forms & Data collection process. It'll give you the flexibility to distribute your forms to multiple platforms. You and your customers will have the confidence that the data collected is CORRECT, RELIABLE, SECURE and DISTRIBUTED to all intended recipients with just a click of a button! This solution will give everyone peace of mind. You'll know for months or years later that the original Electronic Form or the Printed Form can still be authenticated and verified. Remember, the ORIGINAL Electronic Form can never EVER be altered after submission to the Form Foundry Form Server.

- **Form Foundry Creator**
- **Form Foundry Filler**
- **Form Foundry Form Server**
- **Form Foundry Digital Printer**

Tentatively, we have an official BETA Release Date set for September, 2011.
