Action

≪About action≫

The special processing which utilized the application software in personal computers, is called "Action." Field/site data can be linked with various software including Excel and Access.

Practical work of "logging to excel" that collects the data of connection unit on excel sheet, is performed from excel related action. Refer to Reference Manual " Chapter 5 Report to be created using Excel" for Details.

To the customer who uses Microsoft Excel 2007

This function can be used even by Excel 2007.

About details, Please refer to the following.

Reference Manual Chapter5 Creating a Form Using Excel

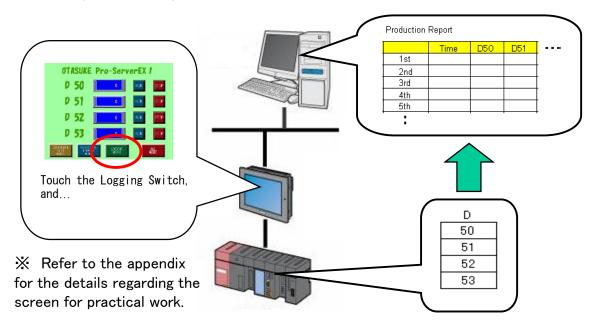

5.9 Notes of file format when using Microsoft Excel 2007

Practical work for excel form

≪Action outline of practical work≫

The data saved in device USR20-23 of PLC is logged to Excel on a personal computer.

≪Setup steps≫

- ② Start the Pro-Studio EX and create the network project file (NPX).
 - (Use the items created from 1st chapter)
- Register the participating node.(Registered in Chapter 1)
- Register the symbol of the device address which is to be used. (Registered in Chapter 1)
- 5 Set up the feature (action and trigger conditions).
 - •The area which records data on the template of (1) is created.
 - •Trigger conditions are set in each area.
- 6 Transfer NPX after performing save/reload.
- (7) Check the action.
 - \rightarrow As for the practical work from the next page,perform it 5 onwards after creating the template for 1, as a items in which $\textcircled{2}^{\sim}\textcircled{4}$ are already exist.

[1] The template for Excel is created as follows.

| | Α | В | С | D | Е | F |
|----|--------------------|------|-------|-------|-------|-------|
| 1 | Productions report | | | | | |
| 2 | | | | | | |
| 3 | | Time | USR20 | USR21 | USR22 | USR23 |
| 4 | 1st | | | | | |
| 5 | 2nd | | | | | |
| 6 | 3rd | | | | | |
| 7 | 4th | | | | | |
| 8 | 5th | | | | | |
| 9 | 6th | | | | | |
| 10 | 7th | | | | | |
| 11 | 8th | | | | | |
| 12 | 9th | | | | | |
| 13 | 10th | | | | | |
| 14 | total | 0 | 0 | 0 | 0 | 0 |

4 words data value of D20~23 is selected in productions and it is a template for the 10th time record arranging it horizontally.

A1 : Character "Productions report"

B3 : Character "Time"

C3 ~ F3(Row) : Character "USR20" "USR21" "USR22"

"USR53"

A4 \sim A12(Column) : Character "1st time" \sim "10th time"

A14: Character "Total"

C14: Total value of C4~C13

D14: Total value of D4 D13

E14: Total value of E4~E13

F14: Total value of F4 F13

A3 \sim F3(Row) : Fill with yellow color

A14 ~ F14(Row) : Fill with gray color

A3 \sim F14 (Row • Column) : Ruled line enclosed with each

If the above-mentioned figure is drawn, the name of "Logging template .xls" is given/attached and it will be saved at desktop.

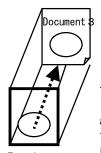

Cne point

About template

It is "Model" and "Foundation" while creating a document.

The format and function on a template, macro etc. are used, in addition to that one template is used by generating the file in which new data is recorded.

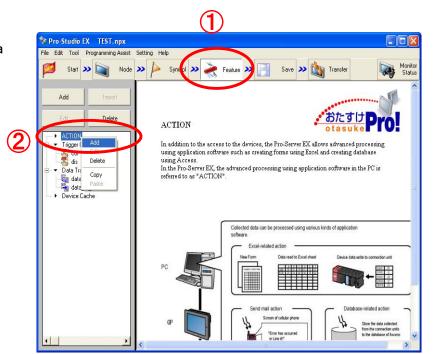

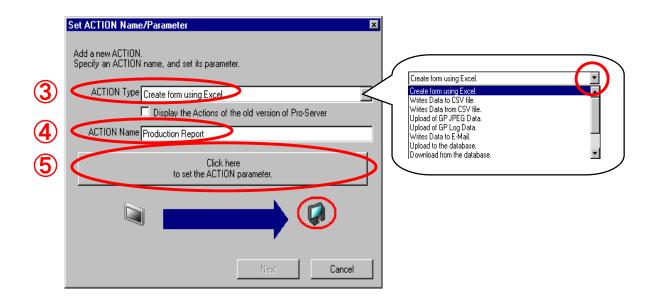

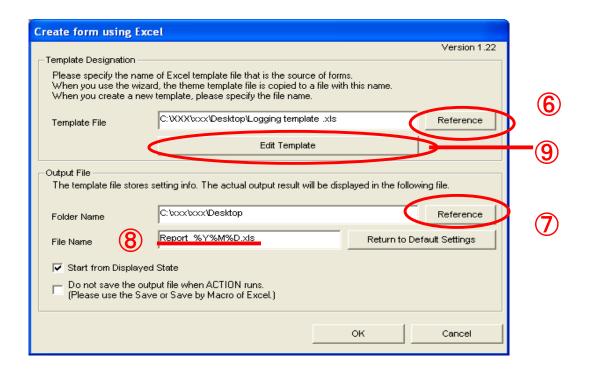

The template information is "watermark read" and the file in which the new information is recorded can be created.

- [2] Set up the action.
- ① Click [Feature] of a status bar.
 - ② Right click the [Action] and click [Add].

- Select [Create form using Excel] for ACTION Type.
- 4 Enter an action name as "Production Report".
- 5 Click [Click here ..] button.

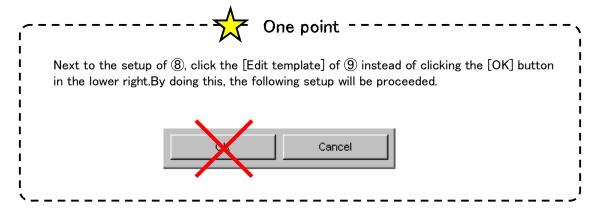

6 Click "Reference" of template file, select the template.

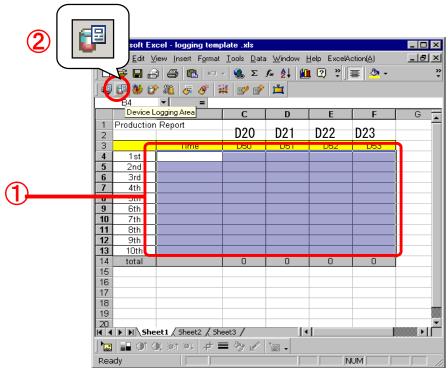

from P3 "Creation of a template"

C:\forall *** \forall *** \forall Desktop\forall logging template.xls

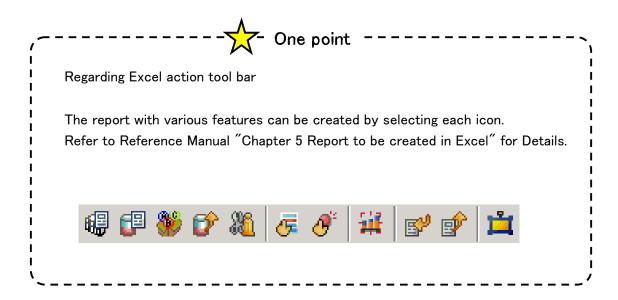

- → Enter the folder name of the personal computer (which is used for practical work) in "***."
- Select the desktop in the folder name of output file.
 - C:¥ *** ¥ *** ¥Desktop
- \rightarrow Enter the folder name of the personal computer (which is used for practical work) in "***."
- Set the file name of output file as default.
- 9 Click the "edit template" button.

[3] Excel will get start and the following template which is created at the beginning will get opened.

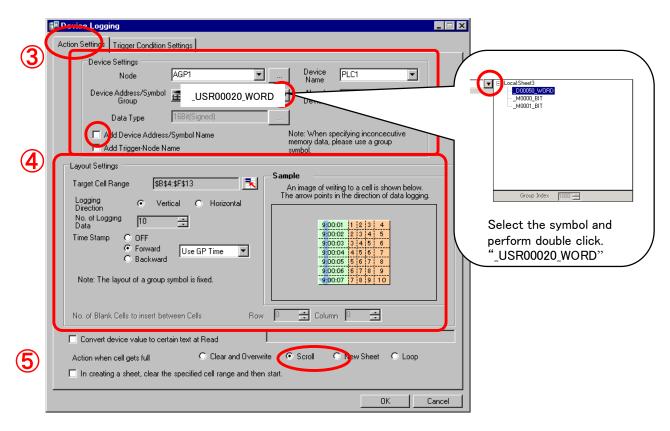

- ① The range will be specified by dragging the cell from B4 to F13 on the template.
- 2 Click the icon of "Device logging area" from excel action tool bar.

Edit the device logging area

Action setting tab (it sets up which data is recorded in what way.)

3 Device setup The following items are selected from the pull down button.

Participating department: AGP1

Model name : PLC1

Device address / symbol group :_USR00020_WORD

Remove the check of "adding a device address $\/$ symbol name".

4 Layout setup

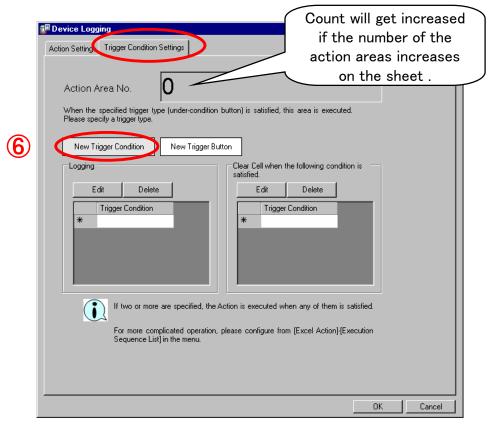

Time stamp : "Forward"

5 Action when cell gets full: Scroll

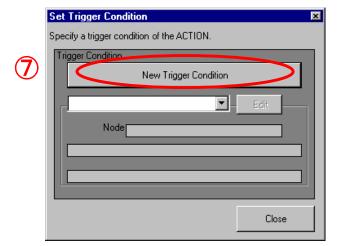

Enter other items as per above figure.

→ Next, click the "Trigger condition setup" tab.

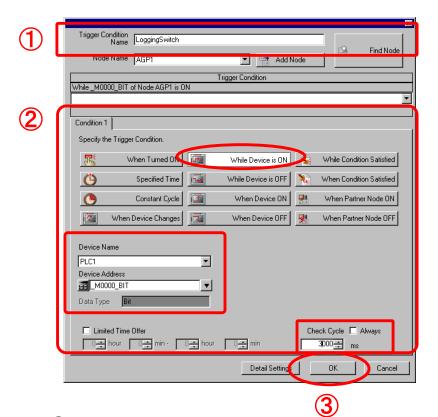

Trigger condition setting tab (the timing in which data is recorded, is set up)

- 6 Click [New trigger conditions].
- Click [New trigger condition] button from "Trigger condition setup"

[4] Set the new trigger conditions.

1 Name of the trigger condition:

Logging switch

Node name: AGP1

2 Condition: "While Device is ON"

Device name: PLC1

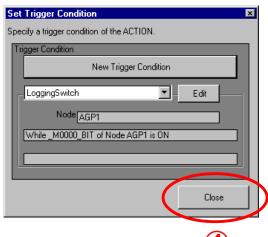

Device address: _USR0000000_BIT

Check cycle: 3000 ms

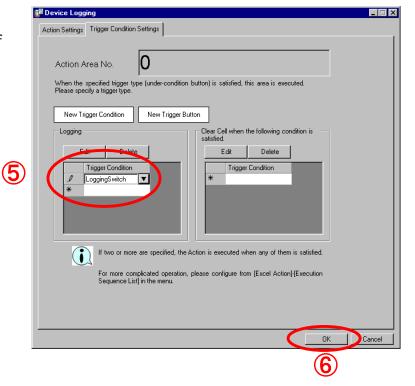

3 Click [OK] button.

The trigger condition logging switch is created above.

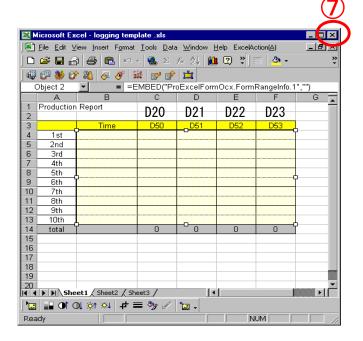

4 Click [Close].

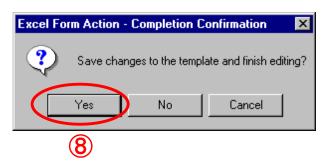

- ⑤ Double click the [Logging switch] from pull down button of trigger condition and select it.
- 6 Click [OK] button.

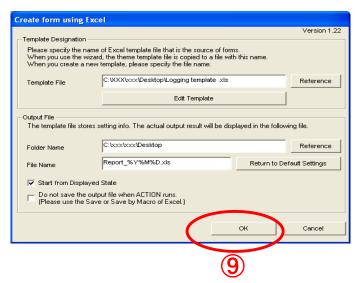

- Texcel will get close after clicking [X] mark icon of upper right corner of window.
 - *The screen will get color in action area.

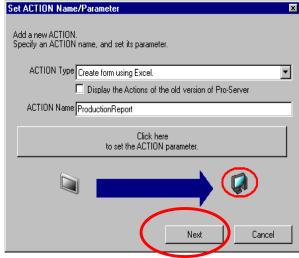

8 Click [Yes] in the "Completion confirmation" dialog box.

 Olick [OK] button in the dialog box of "create form using excel"

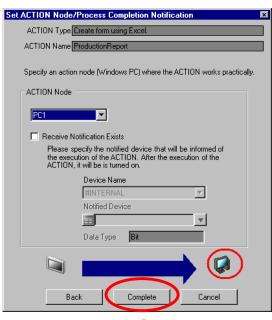

Dialog box of "Set action name/parameter" will get open.

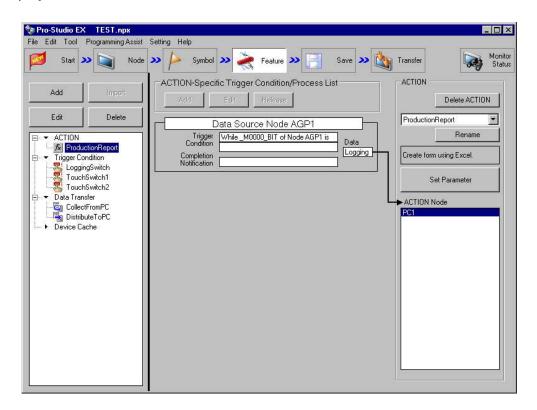

10 Click [Next] button.

Dialog box of "Set action node/process completion notification" will get opened.

① Click [Complete] button.

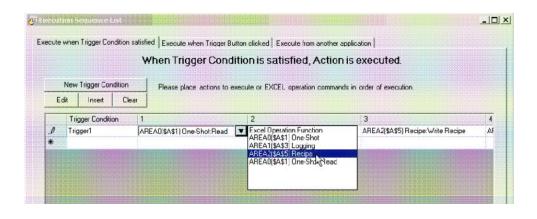

Trigger conditions of action "productions report" and the process list are displayed.

Execution Sequence List

When two or more action areas and the Trigers are added on the template, the order of executing them can be arranged. About details, Please refer to the following. Reference Manual Chapter5 Creating a Form Using Excel 5.5 Arranging Sequence of ACTION (New Form)

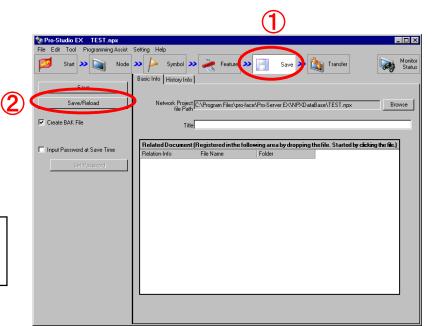

[5] Save/reload NPX and it will transfer to AGP.

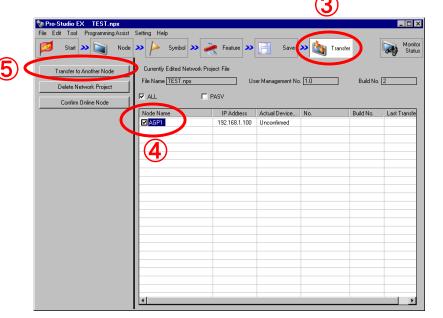

2 Click [Save/reload].

After reloading, the Excel output file shown on the next page will appear.

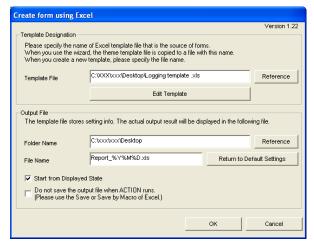

- ③ Click [Transfer] on status bar.
- 4 Select the participating node for transfer destination.
- ⑤ Click [Transfer to another node].

A message as shown in right side is displayed, and if there is no problem/issue with an error check, transfer will terminate normally.

Transfer to the personal computer itself is unnecessary.

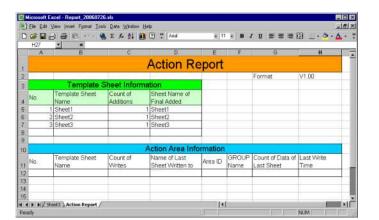

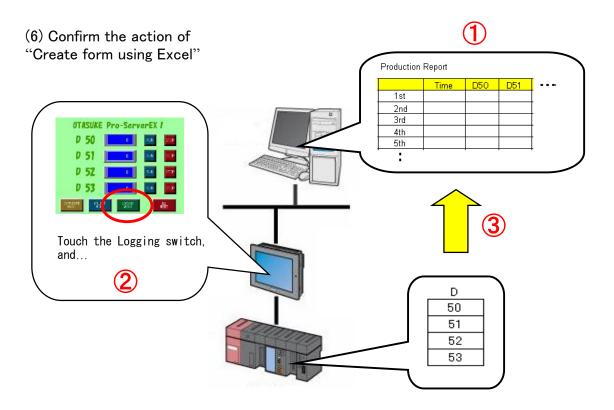

\bigcirc One point -

Regarding Action Report

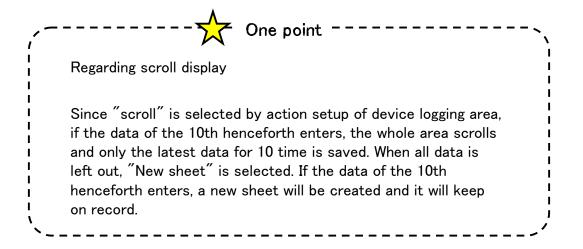

The Excel file which is generated at the time of reload will get open and "Action Report" will be added to the final sheet. Do not delete the "Action Report."

It will become the cause by which defect will occur in action.

- ① Open SHEET1 of the Excel output file (Report_*******xls).
- ② If the logging switch on GP screen is pressed, 4-word data from D50 of PLC1 will be written in Excel.
- (3) If it will be written till 10th time, it will be scrolled afterwards.

When communication does not work, refer to the "communication setup of a personal computer and the check method" of introductory chapter and check the setup.

Memo (The following is blank space. Use it freely.)
