## 

New light－vehicle sales increased in zoio to 11.55 million units from the previous year＇s 10.4 million units．Sales should improve by about 11 percent in 2011．Typical dealerships saw sales increases in all depart－ ments for the year and costs moderated in relation to new－vehicle sales volume．Real GDP grew moderately， by 2.9 percent，in 2010，then slowed to about 2 percent growth in the first quarter of 2011．The unemployment rate averaged 8.8 percent at the end of 2010，down only slightly from 2009．In 2011 the unemployment rate stands stub－ bornly high at 8.8 percent．Consumer confidence has remained uneven so far in 2011，falling slightly in May．

Difficulties in residential housing sales remain，even as finance availability for new－vehicle customers and for new－ vehicle dealers has improved．Japan＇s tsunami has hurt international new－vehicle sales and economic growth，as the world continues to lack an adequate supply of cars and trucks．Falling residential real estate values are also holding back the recovery of new－vehicle sales in the United States．Fortunately，for consumers and dealers，the cost of bor－ rowing remained moderate for 2010 and so far in 2011，as the Federal Reserve left target short－term interest rates at a modest rate．Short－term rates should start to increase during 2012.

In 2010 vehicle sales continued to be driven by somewhat－generous incentives，such as cash rebates，value pricing， and subvented rate financing and subvented leases．New light－duty sales of 11.55 million units in 2010 were 11 per－ cent higher than in 2009．In the last quarter of 2010，the economy grew despite modest declines in the residential housing values and rising gasoline prices；the latter helped change the mix of new－vehicle sales to a greater percentage of small cars，a trend that accelerated in the first quarter of 2011．New－vehicle dealers should be able to sustain sales that may end up nearly 11 percent higher during full－year 2011，as supply increases in the second half．

Total dealership dollar sales in 2010 exceeded $\$ 564$ bil－ lion，up about 17 percent from 2009．Dealers maintained a payroll employment of less than 900,000 as dealerships continued to close，but the average dealership hired one person in 2010．With many of these expenditures made locally，dealerships provided vital support to the economic well－being of their communities．Franchised dealers were also major payers and generators of federal，state，and local tax revenue，as well as major contributors of both time and money to local and regional charities．

#  <br> <br> Average Dealership Profile 

 <br> <br> Average Dealership Profile}

Sales for the nation's new-vehicle dealers reached 11.55 million units in 2010. Even as modest economic growth occurred, higher energy prices and instances of political instability around the globe hindered sales growth for the nation's new-car and -truck dealers in 2011. Total dealership revenue topped $\$ 512$ billion, growing by 2.3 percent in 2010, and sales in the used-car department saw the largest increase ( 21 percent) for the typical dealer. Newvehicle sales revenue was higher than in 2009; the average dealership saw gains of almost 19 percent. Net profit levels posted strong gains from 2009, with the typical store generating more than $\$ 642,000$ in annual net pretax profit for 2010.

## TOTAL GROSS AND EXPENSE

Total dealership gross margins moderated in 2010 to 14.5 percent of total dealership sales. With economic recovery, the 2010 operating profit doubled to one percent of sales.

Total expense increased by 6.6 percent, but declined as percentage of sales fell to 12.5 percent. As dealers sold more new vehicles, advertising expense increased, but fell one percent to $\$ 654$ on a basis of new vehicles sold. Floor-plan expense saw a negative measure of minus $\$ 39$ per new vehicle sold, reflecting assistance on floor plan for 2010. Some major expenses for the average dealership in 2010:

Payroll \$2,394,000
Advertising \$335,600
Rent and equivalent $\qquad$ \$389,400

## TOTAL DEALERSHIP PROFITS

In 2010 total dealership net profit before tax as a percent of sales was 2.1 percent, up from 1.5 percent in 2009. Dollar profits gained 60 percent. New-vehicle department operating profit at the average dealership continued to decline and was below breakeven in 2010. Used vehicles contributed one-third of operating profit in 2010.

NADA Optimism Index

The year ended with the NADA Dealer Optimism Index at 179, improved from 140 at the end of 2009. The economy still features low inflation and historically low interest rates, with growth in gross domestic product (GDP) of 2.9 percent for 2010, compared with a decline in GDP for all of 2009. In 2010 consumer confidence improved from the low levels experienced during the recession. The Consumer Confidence Index exhibited a moderate upward trend in the first quarter of 2011. The consumer outlook also improved during 2010, but has been erratic year-to-date, falling somewhat in May. Although NADA's dealer optimism index slipped to 166 in first-quarter 2011, dealer confidence levels suggest that 2011 will see continued improvement in light-vehicle sales and profits.

## New－Car Dealerships

Consolidation in the number of franchised dealerships is expect－ ed to moderate after a large net loss of 1,550 in 2009 and 760 in 2010. Dealership groups are looking for acquisitions during 2011，according to published reports，and manufac－ turers＇efforts to reduce the number of dealership points in 2009 and 2010 resulted in a drop of more than 4 percent in the number of dealership rooftops for 2010.

The net dealership count decline in 2009 was as bad as that of the worst year for dealership losses，1980， during the 1980－82 recession，a time when extremely high interest rates greatly reduced new－car sales．In the recent recession，real estate and bank－ ing problems persisted despite histori－ cally low interest rates；the net result was the drop in new－car sales．

The bar graph at right shows that the loss of dealerships over the past 20 years has been largely concentrat－ ed in relatively smaller－volume new－ car dealerships．In 2011 there were 4，864 dealerships with sales levels of less than 150 new vehicles per year， as sales remained low and inflated the count in that grouping．Today， dealerships with sales of more than 750 new light vehicles per year fell to 3,987 ，whereas in 2001 ，a high－ volume sales year，6，446 stores sold at that rate．That 750 －plus sales cate－ gory will grow in future years as sales return to levels above 15 million new－ car sales annually．

# NADA晋㩆 <br> Total Dealership Sales Dollars 

Total dollar sales at the nation's new-car dealerships increased 17 percent in 2010, the first full year of postrecession growth. Used-car department sales improved in 2010, with a 10 percent increase in transaction prices and a 13.4 percent gross margin on retail used selling prices after years of soft sales caused by oversupply and high new-vehicle incentives and then recession. Higher used-car prices increased the trade-in equity for customers. Nine states had average dealership sales lower than $\$ 20$ million; 18 had sales exceeding $\$ 30$ million.

#  <br> <br> The New-Vehicle Department 

 <br> <br> The New-Vehicle Department}

New-vehicle sales- 11.55 million units in 2010-were far lower than the average 16 million-plus units in the 2000-2007 era. On a seasonally adjusted annual rate (SAAR) basis, sales volume was at or above 13 million units during the first four months of 2011. Sales may drop off through June, because of production shortages for some Japan-based manufacturers resulting from the tsunami, then recover in the fall. In early 2011, total automaker inventory remained below the desired 60 days of supply. Days' supply of domestic vehicles decreased to 54 days' supply at the end of April 2011, as some of the faster-selling imported vehicles from Japan fell well below 35 days' supply.

In 2010 the average selling price of a new vehicle, including accessories and options (next page, upper right), rose by 2.9 percent from 2009.

New-vehicle sales by manufacturer (bottom of the next page) show Ford and Chrysler market share rising in 2010. Of the three major Japanese brands-Toyota Honda, and Nissan -market share rose only for Nissan and fell for the other two. Hyundai and Kia sales combined rose to a 7.7 percent share in 2010 from 7.1 percent in 2009. Acura, Infiniti, Subaru, Audi, and Volkswagen enjoyed mar-ket-share increases in 2010.

## New-vehicle inventories and days' supply

## F\＆l，Service Contracts

Despite economic recovery and stronger new－vehicle sales，gross mar－ gin on the sale of new cars and trucks held steady at 4.49 percent in 2010．In this tough market，fuel price changes can leave dealers with the wrong new and used inventory，which makes prof－ its from finance，insurance，and ser－ vice contracts increasingly important to the new－vehicle department．

Aftermarket income rose in 2010， with a 15 percent lift in F\＆I dollars and a 7 percent increase in service contract dollars from 2009．The abili－ ty to obtain finance for customers improved，too．A renewed focus on F\＆I，resulting in higher finance pen－ etration rates for both new and used units，and a greater emphasis on cus－ tomer understanding and satisfaction in F\＆I yielded better performance．

Gross as percentage of selling price

Improvement in new－vehicle sales and a stronger economy helped boost the new－vehicle service contract pene－

## The Used－Vehicle Department

New－vehicle dealers sold more than 18 million used cars last year．Of these， 11.2 million were retailed and 7.3 million were wholesaled．The aver－ age selling price of a used unit retailed in 2010 was $\$ 16,474$ ，up 10 percent from $\$ 14,976$ in 2009.

New－vehicle dealers acquired 51 percent of the used units they retailed from trade－ins， 30 percent from auc－ tions，and the remaining 19 percent from street purchases or other sourc－ es．As a source of used cars，auctions made the biggest inroads in the past decade－from less than 10 percent of inventory in the early 1980 s to 51 percent in 2010.

## NADA美言急 <br> Service，Parts，and Body Shop

Total franchised dealership service，parts，and body shop sales reached nearly $\$ 78$ billion in 2010， and sales by the typical dealer were up by 5.2 percent，as many car own－ ers drove their cars and trucks longer． Dealerships faced increasing competi－ tion from independent service centers and quick－lube centers，but dealers continue to attract customers with competitive pricing and upgraded facilities．Last year＇s service sales were powered by stronger light－vehicle sales in addition to continued recall activity for some makes and service needed for the aging vehicles．

New－vehicle dealers have made a major investment in service and parts to increase sales and customer satisfac－ tion．To boost customer convenience and make full use of their facilities， 78 percent of dealers offer evening service hours，weekend hours，or both．The average dealership service department is open for business 56 hours per week．

In recent years，more dealerships have opted to remain out of the body shop business．NADA Industry Analysis estimates that just 33 percent of new－vehicle dealerships had body shops in 2010，down from 2009．Auto bodywork performed by all new－ vehicle dealerships remained at just over $\$ 6.4$ billion in 2010，down from about $\$ 6.6$ billion in 2009 ．

## Employment and Payroll

Franchised dealers are major employers, as well as significant contributors to their communities' economies, tax bases, and civic and charitable organizations. In the past seven years, total dealership employment plateaued at 1.1 million before falling to less than one million in 2009 and dropping further in 2010.

In 2010, the average dealership hired one additional worker, but because of dealership closings caused by bankruptcies, the recession, and vehicle manufacturer demands, total dealership employment in 2010 fell to an estimated 892,300 employees from 912,600.

The number and type of employees vary significantly among dealerships depending on store characteristics such as size, location, makes handled, and distribution of sales among departments. Total dealership employment count in 2010 was estimated as follows:
New- and used-vehicle
salespeople
172,300
Technicians...........................248,200
Service and parts workers
(other than technicians) .... 273,900
Supervisors, general office
workers, and others $\qquad$ .197,900
Total .892,300
The average dealership in 2010 employed 50 persons and had an annual payroll of $\$ 2,594,000$. The payroll for all dealerships was $\$ 42.4$ billion. Dealerships provided on average 10.3 percent of total retail payroll in their states.

## Vehicles in Operation and Scrappage

At the end of 2010, there were about 240 million light vehicles and 248 million total vehicles in operation. In the 10 years before 2007, the total light-vehicle fleet had increased by an average of 4 percent per year but was negative in 2009 and 2010. NADA estimates that the 2010 median age for cars was 10.9 years and for light trucks, 10 years, while the average light-vehicle age, higher than the median, was 10.6 years.

Scrappage-the difference between sales and the growth of the light-vehicle population-was an estimated 22 thousand units in 2010, leaving the vehicle population essentially unchanged.

Total vehicles in operation, by year

[^4]Slight improvements in new-car sales, modest recovery in the economy, and slight net scrappage boosted the aver-
age age of cars and trucks in use during the year, contributing to demand for new vehicles in 2011.

## Vehicles in operation-scrappage, by year

|  | Total vehicles <br> in use | New vehicle <br> registrations | Scrappage | Scrappage as \% <br> of registrations |

## Advertising and the Dealership

Franchised dealers spent more than $\$ 5.94$ billion on advertising in 2010, up from $\$ 5.39$ billion in 2009. In 2010 average ad expense per new vehicle sold fell to $\$ 654$, down 1.1 percent from 2009. In the past 10 years, the allocation for newspapers dropped by 30 percentage points, though many newspapers provide associated Internet advertising. In 2010 the typical dealership spent 23.7 percent of advertising dollars on Internet ads, up from 22.2 percent in 2009 and 4.6 percent in 2000. Television held its share, and radio gained 0.06 percent in 2010 from 2009.

## New-Truck Dealerships

Sales of medium- and heavy-duty trucks (Classes 4-8) increased to 217,702 units in 2010, a 9 percent gain from 2009's 199,686 units.

Market shares for all classes combined remained unchanged at the top, with International gaining 0.3 of a percentage point to command 26.8 percent of the market, and Freightliner picking up 3.8 percentage points to retain second place at 25.9 percent. Ford held third spot, with 13.9 percent of the combined market in 2010 compared with 13.3 percent in 2009. In doing so, Ford sold no Class 8 trucks. Paccar brands captured fourth and fifth, with Peterbilt at 7 percent and Kenworth at 6.6 percent of the combined marketplace. Stablemates Volvo Truck and Mack took sixth and seventh place, respectively, with 4.6 and 4.2 of the combined Class 4-8 market.

## Truck categories

Trucks are classified by gross vehicle weight

| Class 1 | $0-6,000 \mathrm{Ib}$. |
| :--- | ---: |
| Class 2 | $6,001-10,000 \mathrm{Ib}$. |
| Class 3 | $10,001-14,000 \mathrm{Ib}$. |
| Class 4 | $14,001-16,000 \mathrm{Ib}$. |
| Class 5 | $16,001-19,500 \mathrm{Ib}$. |
| Class 6 | $19,501-26,000 \mathrm{Ib}$. |
| Class 7 | $26,001-33,000 \mathrm{Ib}$. |
| Class 8 | 33,001 and over Ib. |

## Dealership Financial Trends

As recovery from recession continued at a very modest pace, new-vehicle net profit remained negative in 2010, but more than halved the losses of 2009. Lower floor-plan costs from low interest rates helped soften the decline of new-vehicle profits in 2010.

Net used-car profits improved further in 2010. Dealerships dealt with a shortage of trade-ins caused by the recession, which increased used-car and -truck prices. Financial institutions are offering more attractive rates for used-car purchases because they recognize that used values will remain at higher levels for several years. Also, new- and used-vehicle loans are performing relatively well compared with other lending areas. The result: many promotions of attractive financing rates and loan features as well as attractive lease terms by financial institutions. High used-car prices provide more trade equity for newvehicle customers.

Total service and parts profits remained strong in 2010, near the level of 2009, as consumers drove current vehicles greater distances and significant recall activity continued. Total dealership revenue grew 17 percent and new-vehicle revenue grew 18.5 percent in 2010 for the average dealer. Dealers continue to compete with independent service outlets for the less-frequent periodic service and repairs required on newer, more sophisticated vehicles.
