Your steam charges

Steam you used during this 999 day billing period from Mmm DD, YYYY to Mmm DD, YYYY
Rate category: SC 3 – Apartment House Service
 We measure your steam by how many Mlbs you use. The meter multiplier is the factor by which the meter reading difference is multiplied. Steam meters are calibrated to measure consumption at 125 psi. The pressure correction factor adjusts the consumption to show the difference between 125 psi and the average at which steam is provided. Your total steam use is the sum of the usage from your various meters which follow. Demand is the highest amount of steam usage in any half hour during the bill period.

Total steam use 99,999,999 Mlbs
On-peak demand 99.999 Mlbs/hour
All-time demand 99.999 Mlbs/hour

Meter: 1 Meter number: 9999999 XXXX XXXXXXX

Total steam charges s\$99,999,999.99

	Billing Days	Heating degree days	Cooling degree days
Current billing period:	30	1036	00
Same period last year:	30	1189	00

Fuel Adjustment:
 This plus or minus figure reflects the changes, up and down, in the cost to us of the fuels we use to supply you energy. The fuel adjustment amount included in the bill is calculated by multiplying the fuel factor expressed in cents per 1000 lbs. of steam by the number of Mlbs. of steam billed.

Heating Degree Days:
 Heating degree days are recorded from September 1 to June 30 and are based on the average of the daily maximum and minimum dry bulb temperature subtracted from 65 degrees Fahrenheit.

Heating Degree Days = $65^\circ\text{F} - \frac{\text{High Temperature} + \text{Low Temperature}}{2}$

Cooling Degree Days:
 Cooling degree days are recorded from April 1 to November 30 and are based on the average of the daily hourly dry and wet bulb temperature in excess of 57.5 degrees Fahrenheit.

Cooling Degree Days = $\frac{\text{Average Hourly} + \text{Average Hourly} - 57.5^\circ\text{F}}{2}$
 Wet Bulb Temp. Dry Bulb Temp.

On-peak demand:
 Based on the integrated demand occurring during the two highest contiguous fifteen-minute intervals recorded for the on-peak period (Monday-Friday) from 6 AM to 11 AM during the winter period.

All-time demand:
 Based on the integrated demand occurring during the two highest contiguous fifteen-minute intervals recorded for all hours and all days during the winter period.

Pressure Correction Factor:
 Steam meters are calibrated to measure consumption at 125 psi. The Pressure Correction Factor adjusts the consumption to show the difference between 125 psi and the average at which the steam is provided.
