DEPARTMENTAL SECURITY POLICY:

The buildings in which the Department's business is conducted or those buildings used for the manufacture of storage of security items are basic to the overall security of the Department's business. The steps detailed below are to be utilized in evaluating security measures for all issuing offices and manufacturers of security items.

I. PLANT SECURITY:

A. The physical plant should be constructed so that the ingress and egress of the public and its employees may be controlled. In those areas where security items are maintained or manufactured, public access should be precluded.

(continued)

DEPARTMENTAL SECURITY POLICY: (Cont'd)

I. PLANT SECURITY: (Cont'd)

- B. Construction of the plant should be of a permanent nature with a minimum of fire hazards and with the ability for being secured both during and after working hours.

II. DURING WORKING HOURS:

- A. During working hours, those areas in which security items are maintained or manufactured should be secured with controlled access areas limited to employees only. Said employee is to be identified as having authority to enter the area.

III. AFTER WORKING HOURS:

- A. After hours, the premises should be secured with either an alarm system integrated with an enforcement agency or a duly recognized security force. In lieu of an alarm system, security guards, to be of a recognized security agency or private security personnel meeting the standards of a recognized security agency, should be sufficient to patrol the area.
- B. In the case of manufacturing facilities, the area allocated and used for the manufacturing and/or storage of the completed product and the storage of the stock and necessary engraving plates or numbering heads, etc., used in the production of the security item should be secured in the fashion named above for both during and after working hours. If a manufacturer is engaged in producing other than security forms for the Dept. of Motor Vehicles, a security restriction should apply only to those areas designated and used for the production of Motor Vehicle items.

If unique stock is utilized in the production of a security item, provisions must be made for the security of the stock and its accountability during shipment to the plant, storage while in the plant, and a secure method and accountability for the disposal of waste and overruns.

In all of the above, inspections of the premises must indicate that the security measures are fully utilized at all times and not just merely available. Secure storage and accountability of the finished product while in the manufacturer's hands and provisions for the secure shipment of the completed security items to their destination must be provided.

PLEASE NOTE:

When printing is provided on recycled stock, contractor must include a printed statement or symbol on the printed material which indicates that the document is printed on recycled stock.
