1. Was the leak/burst obvious and visible to the customer? ☐ Yes / ☐ No

2. Date of repair: ____ / ____ / ____ **Meter Number:** _____

3. Meter Reading: _____ **(at time of repair)** Flow rate _____

Where was the leak located? _____

Did irrigation system have manual isolation valve and master solenoid prior to repairs? ☐ Yes / ☐ No

If No, has manual isolation valve and the master solenoid now been installed? ☐ Yes / ☐ No

Note: Manual isolation valve must be installed by licenced plumber

I certify, the work completed on the irrigation system at the above address has been completed to industry standards

WGI Number: _____ Mobile No: _____

WGI Name and Company: _____

WGI Signature: _____ Date: ____ / ____ / ____

Important Information

Whilst the Water Corporation supplies water to the water meter, property owners are responsible for the cost of any water use registered on the water meter, all water used or lost through the internal water service and for maintaining the internal water service in good condition.

The leak that was repaired at your property may have had an effect on the water use recorded. If this is the case, we may consider granting a special allowance to offset a portion of the water wasted.

Application conditions:

- Customers can apply for one (1) allowance per owner per property every five (5) years
- Leak allowances granted will cover only a portion of the total water use. A limit of 1000 kLs per allowance is applied
- Internal pipework repairs are undertaken by a licensed plumbing Contractor and the necessary certificate of compliance/s are completed by the relevant licensed plumbing contractor.
- Licensed plumbing Contractor must hold a current plumbing trade's person license under the direction and control of a Licensed Plumbing Contractor or contractor's license as issued by the Plumbers Licensing Board. For more information visit commerce.wa.gov.au
- The irrigation system must (as a minimum) have a WaterMark certified manual isolation valve, a backflow prevention valve complying with AS/NZS 35 and master control solenoid installed to meet irrigation industry standards. If there is no manual isolation valve and master solenoid installed by a Licensed Plumbing Contractor, an allowance will be assessed upon re-application after the irrigation system is upgraded to the required Plumbing standard and regulations and is certified as such by a licensed plumbing Contractor. WGI's can verify the existence of these required items.
- WGI's must be a part of the Waterwise Garden Irrigator Program (WGIP). Visit watercorporation.com.au for a full list of participants.
- WGI's are not permitted to perform leak repairs or install manual isolation or backflow prevention devices on internal plumbing services.
- A completed Leak Allowance Application Form is submitted (together with a copy of the licensed Plumbing contractor's / WGI invoice) within 14 days from the date of repair.

PLEASE NOTE - If you engage the services of a licensed Plumbing contractor to check or make repairs to your internal service OR a WGI to check or make repairs to your irrigation, the Water Corporation will **NOT** reimburse you for the cost of this service.

An allowance will not be considered:

- For leaks and/or bursts that occur on internal or external taps; internal appliances, fixtures or fittings including air conditioners, dish washers, swimming pools, hot water systems, toilet cisterns and valves
- When the leak is visible
- When the leak on the internal plumbing is not repaired (or verified) by a licensed plumber
- When the garden irrigation system does not as a minimum have a manual isolation valve and master solenoid installed
- When the internal plumbing is open ended (i.e. not connected to anything)
- For plumbing that is not compliant with government regulations
- For vacant or unattended premises that are not inspected and maintained regularly

Stop tap at water meter:

- Is used by the Corporation to temporarily stop the flow of water when carrying out routine repairs and maintenance. Customers may also use the stop tap to shut off the supply temporarily to carry out repairs to internal pipes and fittings.
- Is not to be used for an extended period to shut off supply. If the stop tap fails, all water use remains the responsibility of the property owner. To shut off the supply for an extended period a manual isolation valve must be installed on the internal pipework for this purpose.

PRIVACY STATEMENT - Information collected on this form will be used for the purposes directly related to the service you have requested. Your prior consent will be sought for any other proposed disclosure. Details of our Privacy Policy can be found on our website, www.watercorporation.com.au
