

SD Common Core State Standards Disaggregated Math Template

Domain:	Number System	Cluster:	Apply and extend previous understandings of operations with fractions to add, subtract, multiply, and divide rational numbers	Grade level:	7
----------------	---------------	-----------------	---	---------------------	---

Correlating Standard in Previous Year	Number Sequence & Standard	Correlating Standard in Following Year
<p>6.NS.5 Understand that positive and negative numbers are used together to describe quantities having opposite directions or values (e.g., temperature above/below zero, elevation above/below sea level, debits/credits, positive/negative electric charge); use positive and negative numbers to represent quantities in real-world contexts, explaining the meaning of 0 in each situation.</p> <p>6.NS.6 Understand a rational number as a point on the number line. Extend number line diagrams and coordinate axes familiar from previous grades to represent points on the line and in the plane with negative number coordinates.</p> <p>6.NS.6a Recognize opposite signs of numbers as indicating locations on opposite sides of 0 on the number line; recognize that the opposite of the opposite of a number is the number itself, e.g., $-(-3) = 3$, and that 0 is its own opposite.</p> <p>6.NS.6b Understand signs of numbers in ordered pairs as indicating locations in quadrants of the coordinate plane; recognize that when two ordered pairs differ only by signs, the locations of the points are related by reflections across one or both axes.</p> <p>6.NS.6c Find and position integers and other rational numbers on a horizontal or vertical number line diagram; find and position pairs of integers and other rational numbers</p> <p>CC.6.NS.7 Understand ordering and absolute value of rational numbers.</p> <p>6.NS.7a Interpret statements of inequality as statements about the relative position of two numbers on a number line diagram. <i>For example, interpret $-3 > -7$ as a statement that -3 is located to the right of -7 on a number line oriented from left to right.</i></p> <p>6NS.7b Write, interpret, and explain statements of order for rational numbers in real-world contexts. <i>(for example, write -3 degrees Celsius $>$ -7 degrees Celsius to express the fact that -3 is warmer than -7 degrees)</i></p> <p>6NS.7c Understand the absolute value of a rational number as its distance from 0 on the number line; interpret absolute value as magnitude for a positive or negative quantity in a real-world situation. <i>For example, for an account balance of -30 dollars, write $-30 = 30$ to describe the size of the debt in dollars.</i></p> <p>6NS.7d Distinguish comparisons of absolute value from statements about order. <i>For example, recognize that an account balance less than -30 dollars represents a debt greater than 30 dollars.</i></p>	<p>7.NS.1 Apply and extend previous understandings of addition and subtraction to add and subtract rational numbers; represent addition and subtraction on a horizontal or vertical number line diagram.</p> <p>7.NS.1a Describe situations in which opposite quantities combine to make 0. <i>For example, a hydrogen atom has 0 charge because its two constituents are oppositely charged.</i></p> <p>7.NS.1b Understand $p + q$ as the number located a distance q from p, in the positive or negative direction depending on whether q is positive or negative. Show that a number and its opposite have a sum of 0 (are additive inverses). Interpret sums of rational numbers by describing real-world contexts.</p> <p>7.NS.1c Understand subtraction of rational numbers as adding the additive inverse, $p - q = p + (-q)$. Show that the distance between two rational numbers on the number line is the absolute value of their difference, and apply this principle in real-world contexts.</p> <p>7.NS.1d Apply properties of operations as strategies to add and subtract rational numbers.</p>	<p>Terminates</p>

Student Friendly Language:

- I can show that the sum of a number and its opposite is zero.
- I can add rational numbers using absolute value.
- I can change a subtraction problem into an addition problem by adding the opposite (additive inverse).
- I can use a number line to find the difference between two integers.
- I can apply properties of operations to add and subtract rational numbers.
- I can determine if a solution is reasonable.
- I can give examples of real life situations involving the addition and subtraction of integers.

Know (Factual)	Understand (Conceptual) The students will understand that:	Do (Procedural, Application, Extended Thinking)
<ul style="list-style-type: none"> ● Additive inverse of rational numbers ● Absolute value difference ● Properties of operations ● Addition and subtraction of rational numbers 	<p>A number and its opposite have a sum of 0.</p> <p>Subtraction of rational numbers is equivalent to adding the additive inverse.</p> <p>A vertical or a horizontal number line can be used to show the relationship of adding and subtracting rational numbers.</p> <p>When adding integers on a number line, the sum is located a distance in the positive or negative direction depending on the sign of the number.</p> <p>Properties of operations can be used strategies to add and subtract rational numbers.</p>	<p>Model addition and subtraction of rational numbers using a number line.</p> <p>Use properties of operations to add and subtract rational numbers in real world situations.</p> <p>Rewrite subtraction problems as addition problems by applying the additive inverse property.</p> <p>Describe real life situations in which opposite quantities combine to make 0.</p> <p>Explain sums of rational numbers by describing real-world contexts.</p>

Key Vocabulary:

Relevance and Applications: How might the grade level expectation be applied at home, on the job or in a real-world, relevant context? Include at least one example stem for the conversation with students to answer the question “why do I have to learn this”?
<p>Sports: football yards gained and lost; golf strokes above and below par</p> <p>Temperature/elevation (Including fractional values)</p> <p>Money account balance, debit/credit Stock market</p> <p>Price increases/decreases</p> <p>Checking Account: Your current checking account balance is \$200. You bought an iPod for \$299 and basketball shoes for \$109. You deposited \$400, which you received from your birthday and Christmas, into the account. What is your account balance?</p> <p>Temperature: You and a group of friends are scaling Mount Rushmore. When you begin your expedition the temperature was 12 degrees Fahrenheit. When you reached the top of Lincoln’s head the temperature was -6 degrees Fahrenheit, how much did the temperature drop while you were on your expedition?</p>

Domain:	Number System	Cluster:	Apply and extend previous understandings of multiplication and division and of fractions to multiply and divide rational numbers.	Grade level:	7
----------------	---------------	-----------------	---	---------------------	---

Correlating Standard in Previous Year	Number Sequence & Standard	Correlating Standard in Following Year
<p>6.NS.1 Understand the concept of a ratio and use ratio language to describe a ratio relationship between two quantities. <i>For example, "The ratio of wings to beaks in the birdhouse at the zoo was 2:1, because for every 2 wings there was 1 beak." "For every vote candidate A received, candidate C received nearly three votes."</i></p> <p>6.NS.2 Fluently divide multi-digit numbers using the standard algorithm.</p> <p>6.NS.5 Understand that positive and negative numbers are used together to describe quantities having opposite directions or values (e.g., temperature above/below zero, elevation above/below sea level, debits/credits, positive/negative electric charge); use positive and negative numbers to represent quantities in real-world contexts, explaining the meaning of 0 in each situation.</p>	<p>7.NS.2 Apply and extend previous understandings of multiplication and division and of fractions to multiply and divide rational numbers.</p> <p>7.NS.2a Understand that multiplication is extended from fractions to rational numbers by requiring that operations continue to satisfy the properties of operations, particularly the distributive property, leading to products such as $(-1)(-1) = 1$ and the rules for multiplying signed numbers. Interpret products of rational numbers by describing real-world contexts.</p> <p>7.NS.2b Understand that integers can be divided, provided that the divisor is not zero, and every quotient of integers (with non-zero divisor) is a rational number. If p and q are integers, then $-(p/q) = (-p)/q = p/(-q)$. Interpret quotients of rational numbers by describing real-world contexts.</p> <p>7.NS.2c Apply properties of operations as strategies to multiply and divide rational numbers.</p> <p>7.NS.2d Convert a rational number to a decimal using long division; know that the decimal form of a rational number terminates in 0s or eventually repeats.</p>	<p>8.NS.1 Know and apply the properties of integer exponents to generate equivalent numerical expressions. For example, $3^2 \times 3^{-5} = 3^{-3} = 1/(3^3) = 1/27$</p> <p>8.NS.2 Use rational approximations of irrational numbers to compare the size of irrational numbers, locate them approximately on a number line diagram, and estimate the value of expressions (e.g., π^2). <i>For example, by truncating the decimal expansion of $\sqrt{2}$, show that $\sqrt{2}$ is between 1 and 2, then between 1.4 and 1.5, and explain how to continue on to get better approximations. π^2. For example, by truncating the decimal expansion of $\sqrt{2}$, show that $\sqrt{2}$ is between 1 and 2, then between 1.4 and 1.5, and explain how to continue on to get better approximations. $\sqrt{2}$, show that $\sqrt{2}$ is between 1 and 2, then between 1.4 and 1.5, and explain how to continue on to get better approximations.</i></p>

Student Friendly Language:

- I can solve real-life multiplication and division problems involving negative and positive rational numbers.
- I can divide rational numbers and understand that the denominator cannot be zero and the answer will be rational.
- I can apply mathematical properties of operations (ex. Distributive Property) to multiply and divide rational numbers.
- I can use long division to find the decimal form of a rational number.
