

Environmental Information

FOR NORTH AMERICAN POWER CUSTOMERS IN RHODE ISLAND

The following environmental information is for electricity supplied by North American Power.

As your generator, North American Power purchases power that is added to the grid equivalent to your electrical usage. Power plants can generate electricity from a number of different fuel sources, resulting in different emissions.

VALUES SHOWN REPRESENT NAP'S MIX FOR CALENDAR YEAR 2014

| Energy Source (Fuel Mix) | NAP's Standard Product | NAP's 100% Renewable |
|-----------------------------|------------------------------|-------------------------|
| Coal | 3% | 0% |
| Nuclear | 25% | 0% |
| Natural Gas | 29% | 0% |
| Wind | 2% | 2% |
| Hydro | 29% | 98% |
| Other | 12% | 0% |
| Total | 100% | 100% |

Air Emissions

Average Nitrogen Oxides (NO_x), Sulfur Dioxide (SO_x), and Carbon Dioxide (CO₂) emissions for the NAP's renewable energy mixes

| Emission Type | NAP's Standard Product Lbs. per MWh | NAP's 100% Renewable Lbs. per MWh |
|------------------------------------|---|---|
| Nitrogen Oxides (NO _x) | 0.720 | 0 |
| Sulfur Dioxide (SO ₂) | 0.718 | 0 |
| Carbon Dioxide (CO _x) | 775.687 | 0 |

CO₂ is a "greenhouse gas" which may contribute to global climate change. SO₂ and NO_x released into the atmosphere react to form acid rain. Nitrogen Oxides also react to form ground level ozone, an unhealthful component of "smog."
