Our Commitment to You

If you seek and heed our advice then we will guarantee the following:

- The product you purchase will perform exactly the task it is designed to do
- The quantity you purchase will be correct
- If, for any reason, a problem occurs we will rectify the problem to your satisfaction.

Item Description	Qty	Unit Price	Total
Grand Total			·

Expected Delivery			

If you are not already a member of our **Lucky Buys** programme, you should really consider joining.

As a cardholder you will be earning valuable reward points, simply by doing your regular purchasing. When you have collected 50 points, you are eligible to receive your \$10 gift voucher. This means that you will receive more rewards more often and without having to spend thousands of dollars.

Plus we don't stop there! Every time you shop with your Lucky Buys Reward card, you are automatically entered into the regular Major Prize Draw for a chance to win cars and holidays.

The more you shop, the more chances you have of winning!

Working out volumes

Volumes are easy, if you do a couple of simple things. Firstly measure with a tape, do not step it out! Secondly measure everything in metres.

(e.g. 300 mm = 0.3 m, 3" = 75 mm = .075 m) Mulch on or soil in a rectangular garden would be garden width x garden length x the depth of the soil or mulch. (e.g. $1 \text{m} \times 10 \text{m} \times .1 \text{m} = 1 \text{m}^3$)

Mulch on a circular garden is a little different. You need to know the radius; that is the distance from the centre to the edge, or half the distance right across through the centre. Then it is the **radius x the radius x 3.14 x the depth**. (e.g. $2m \times 2m = 4m^2$, $4m^2 \times 3.14 \times .1m = 1.256m^3$. Say $1\frac{1}{4}m^3$.

When working out concrete blend add 30% to allow for slumpage.

Have you got your Lucky Buys Reward card??
