

Big Ideas Math® Game Closet

Amazing Decimals

Materials:

- Paper
- Pencil
- Game board below

Directions:

Work with a partner. Each partner has his/her own game board. Each student uses their own board and finds all possible products, like the one shown. List all the products found.

Who Wins?

After a set amount of time, the student with the most products wins.

Variation:

Have students use the blank game board to make up their own game. This can be used with addition, subtraction, multiplication, or division for any type of numbers: decimals, fractions, whole numbers, positive or negative, etc.
