## PURPOSE

This document contains a set of functional requirements for clinical practice management information systems used in community and migrant health centers. Community and migrant health centers can use these requirements to measure the ability of commercial vendor products to provide the information processing and management capabilities that they need. The document lists the requirements in checklists organized under the following categories:

| <b><u>Category</u></b>                   | <b><u>Checklist Number</u></b> |
|--|--------------------------------|
| Patient Scheduling                       | CL-1                           |
| Patient Registration                     | CL-2                           |
| Medical                                  | CL-3                           |
| Patient Follow-Up Monitoring/Tracking    | CL-4                           |
| Billing                                  | CL-5                           |
| Accounts Receivable                      | CL-6                           |
| Management Support: Reports and Clerical | CL-7                           |
| Systems Management                       | CL-8                           |
| Managed Care                             | CL-9                           |

These checklists are intended to be used by health centers and health care networks to define their requirements for clinical practice management information systems in a Request For Information (RFI) or Request For Proposals (RFP) from vendors. The requirements listed in this standard are identified as minimum (those requirements with X under the MIN column) or optional (those requirements with X under the OPT column) capabilities. Minimum requirements are the basic functions the BPHC recommends that FQHCs should perform in practice management. Optional requirements are desirable or supplementary functions. The minimum/optional classifications are intended as guidance, and may be changed by a health center to best meet its own specific needs.

Instructions for vendors completing these forms can be found at Instructions for Vendor Certification. A Glossary of Terms, used in the checklists, is also provided for reference.

**PATIENT SCHEDULING FUNCTIONAL REQUIREMENTS  
(CL-1)**

| Requirements   | Vendor Capability |     |     |            |            |             |
|--|-------------------|-----|-----|------------|------------|-------------|
|  | MIN               | OPT | Yes | Module     | Future Vn. | Third Party |
| <b>1. Booking Appointments</b>   |                   |     |     |            |            |             |
| A. The user is able to select an appointment slot on a specified provider's/clinic's schedule by requesting any one of the following:  |                   |     |     |            |            |             |
| • A particular date  | X                 |     | X   | Scheduling |            |             |
| • Next available appointment after a particular date   | X                 |     | X   | Scheduling |            |             |
| • Next available appointment on a particular day of the week   | X                 |     | X   | Scheduling |            |             |
| • Next occurrence of a particular day of the week.   |                   | X   | X   | Scheduling |            |             |
| • By time of day. The system will select the next time available.  | X                 |     | X   | Scheduling |            |             |
| • By type of visit (e.g., obstetric, well child care, pap smear, dental amalgam restoration, other categories established by the user  | X                 |     | X   | Scheduling |            |             |
| • By provider panel  | X                 |     | X   | Scheduling |            |             |
| • By case manager or primary provider  | X                 |     | X   | Scheduling |            |             |
| • By clinic room or special equipment  |                   | X   | X   | Scheduling |            |             |
| B. The user is able to enter a comment when booking an appointment. This comment is printed on all schedule module outputs, if desired by the clinic.  |                   | X   | X   | Scheduling |            |             |
| C. The user is able to enter the patient's complaint (60 characters minimum) when scheduling an appointment.   | X                 |     | X   | Scheduling |            |             |
| D. The user is able to book one or multiple appointments into an appointment slot. The user can define the multiple/overbooking limits. The system warns the user when the expected maximum number of patients has been appointed to the slot, and allows overbooking. | X                 |     | X   | Scheduling |            |             |
| E. The user is able to modify an appointment to change the required amount of time allotted. This change affects only the particular day's schedule for the specified provider/clinic.   | X                 |     | X   | Scheduling |            |             |

**PATIENT SCHEDULING FUNCTIONAL REQUIREMENTS  
(CL-1)**

| Requirements   |     |     | Vendor Capability |            |            |             |
|--|-----|-----|-------------------|------------|------------|-------------|
|  | MIN | OPT | Yes               | Module     | Future Vn. | Third Party |
| F. The system informs the user of conflicting appointments on the schedule for the specified patient.  | X   |     | X                 | Scheduling |            |             |
| G. The system allows the user to create, modify, or delete types of appointments and to allocate an estimated amount of provider/clinic time needed for each appointment type.   | X   |     | X                 | Scheduling |            |             |
| H. The system allows the user to designate timeframes during which individual providers or clinic resources are not available.   | X   |     | X                 | Scheduling |            |             |
| I. The system allows the user to book an appointment or generate a reminder for an appointment one year in the future.   | X   |     | X                 | Scheduling |            |             |
| J. The system allows the user to view scheduled appointments by scrolling backwards as well as forwards through scheduled appointments.  | X   |     | X                 | Scheduling |            |             |
| K. The system assists the user in coordinating appointments with multiple providers addressing multiple problems during one visit.   |     | X   | X                 | Scheduling |            |             |
| <b>2. Canceling AppointmentsX</b>  |     |     |                   |            |            |             |
| A. The user is able to cancel a specified appointment that has been booked and to specify a reason for the cancellation. The system makes this appointment slot free for rescheduling immediately upon the cancellation. | X   |     | X                 | Scheduling |            |             |
| B. The user is able to cancel all appointments scheduled for a provider in a selected timeframe and to print a report with contact information for all patients affected by the cancellation.                            | X   |     | X                 | Scheduling |            |             |
| C. The user is able to generate mailing labels and reminder letters to patients for missed, cancelled, scheduled, or rescheduled appointments.   | X   |     | X                 | Scheduling |            |             |

**PATIENT SCHEDULING FUNCTIONAL REQUIREMENTS  
(CL-1)**

| Requirements   | Vendor Capability |     |     |            |            |             |
|--|-------------------|-----|-----|------------|------------|-------------|
|  | MIN               | OPT | Yes | Module     | Future Vn. | Third Party |
| D. When a patient misses or cancels the first of a series of appointments, the system allows the user to view, cancel, and reschedule all appointments for the patient.              |                   | X   | X   | Scheduling |            |             |
| <b>3. Displaying Patient AppointmentsX</b>   |                   |     |     |            |            |             |
| A. The user is able to request a display of all future appointments for a given patient or group of patients. For each appointment, this display shows, at a minimum, the following: |                   |     |     |            |            |             |
| • Provider/clinic  | X                 |     | X   | Scheduling |            |             |
| • Appointment date   | X                 |     | X   | Scheduling |            |             |
| • Appointment time   | X                 |     | X   | Scheduling |            |             |
| • Appointment duration   | X                 |     | X   | Scheduling |            |             |
| • Appointment comment (30 characters minimum)  |                   | X   | X   | Scheduling |            |             |
| • Patient's complaint  |                   | X   | X   | Scheduling |            |             |
| • Type of visit  | X                 |     | X   | Scheduling |            |             |
| • Special equipment or room required   |                   | X   | X   | Scheduling |            |             |
| • Patient's account balance  | X                 |     | X   | Scheduling |            |             |
| • Patient's insurance plan   |                   | X   | X   | Scheduling |            |             |
| <b>4. Displaying or Printing a Provider's/Clinic's Schedule</b>  |                   |     |     |            |            |             |
| A. The user is able to view a provider's/clinic's schedule either as a display or in hardcopy form. This output shows one day at a time, week-at-a-glance, or month-at-a-glance.     | X                 |     | X   | Scheduling |            |             |
| B. The user is able to view a schedule of clinic resource requirements on demand.  |                   | X   | X   | Scheduling |            |             |
| <b>5. Printing a Site's Schedule</b>   |                   |     |     |            |            |             |
| A. The user is able to print the day's schedule for a specified site, in sequence by appointment time. This output shows at least the following data for each appointment:           |                   |     |     |            |            |             |
| • Patient name   | X                 |     | X   | Scheduling |            |             |
| • List of names for group visit  | X                 |     | X   | Scheduling |            |             |
| • Patient chart number(s)  | X                 |     | X   | Scheduling |            |             |
| • Guarantor name and relationship  | X                 |     |     |            |            |             |
| • Patient(s) phone number(s)   | X                 |     | X   | Scheduling |            |             |
| • Appointment time   | X                 |     | X   | Scheduling |            |             |
| • Type of visit  | X                 |     | X   | Scheduling |            |             |
| • Appointment duration   | X                 |     | X   | Scheduling |            |             |
| • Appointment comment  |                   | X   | X   | Scheduling |            |             |
| • Patient's complaint  | X                 |     | X   | Scheduling |            |             |
| • Provider name(s)   | X                 |     | X   | Scheduling |            |             |

**PATIENT SCHEDULING FUNCTIONAL REQUIREMENTS  
(CL-1)**

| Requirements  | Vendor Capability |     |     |            |            |             |
|---|-------------------|-----|-----|------------|------------|-------------|
|   | MIN               | OPT | Yes | Module     | Future Vn. | Third Party |
| <ul style="list-style-type: none"> <li>• Patient account status indicator or code</li> </ul>  |                   | X   |     |            |            |             |
| <ul style="list-style-type: none"> <li>• Patient account balance</li> </ul>   | X                 |     |     |            |            |             |
| <ul style="list-style-type: none"> <li>• Date of last payment</li> </ul>  |                   | X   |     |            |            |             |
| <ul style="list-style-type: none"> <li>• New patient indicator</li> </ul>   |                   | X   | X   | Scheduling |            |             |
| B. A schedule list can be sequenced by Patient Name for a user-selected date range.   | X                 |     | X   | Scheduling |            |             |
| C. A schedule list can be sequenced by provider for a user-selected date range.   | X                 |     | X   | Scheduling |            |             |
| D. A schedule list can be produced showing new patients with scheduled appointments, walk-ins, and same day appointments for a user-selected date range.  |                   | X   | X   | Scheduling |            |             |
| <b>6. Creating a Blank Schedule</b>   |                   |     |     |            |            |             |
| A. For each provider/clinic that will be scheduled, the system manager is able to specify and the system maintain a schedule template which outlines the typical week's available appointment slots and specifies a visit type, duration, and expected maximum number of patients for each slot. Slots are available for same-day visits. | X                 |     | X   | Scheduling |            |             |
| B. The system manager is able to enter and edit a list of holidays in the system and thereby remove these days from all available schedules.  | X                 |     | X   | Scheduling |            |             |
| C. The system manager is able to enter and edit a list of leave days during which a particular provider will not be available for appointments.   | X                 |     | X   | Scheduling |            |             |
| <b>7. Pull Lists/Routing Slips/Labels</b>   |                   |     |     |            |            |             |
| A. The system has the capability to produce a pull list for each site. The pull list shows the following data, at a minimum, for each appointment:  |                   |     |     |            |            |             |
| <ul style="list-style-type: none"> <li>• Patient name</li> </ul>  | X                 |     | X   | Scheduling |            |             |
| <ul style="list-style-type: none"> <li>• Patient chart number</li> </ul>  | X                 |     | X   | Scheduling |            |             |
| <ul style="list-style-type: none"> <li>• Patient date of birth</li> </ul>   | X                 |     | X   | Scheduling |            |             |
| <ul style="list-style-type: none"> <li>• Patient gender</li> </ul>  |                   | X   | X   | Scheduling |            |             |
| <ul style="list-style-type: none"> <li>• Appointment date and time</li> </ul>   | X                 |     | X   | Scheduling |            |             |
| <ul style="list-style-type: none"> <li>• Patient telephone number and address</li> </ul>  | X                 |     | X   | Scheduling |            |             |

**PATIENT SCHEDULING FUNCTIONAL REQUIREMENTS  
(CL-1)**

| Requirements   |     |     | Vendor Capability |            |            |                |
|--|-----|-----|-------------------|------------|------------|----------------|
|  | MIN | OPT | Yes               | Module     | Future Vn. | Third Party    |
| • Provider name  | X   |     | X                 | Scheduling |            |                |
| B. A follow-up list can be run to list only the patients registered after the first pull list.   |     | X   | X                 | Scheduling |            |                |
| C. The system allows the user to design labels for printing patient scheduling and registration information.                                   | X   |     | X                 | Scheduling |            |                |
| D. The system can produce an encounter label or “superbill”/encounter form for scheduled appointments that includes the following information: |     |     |                   |            |            |                |
| • Patient name   | X   |     | X                 | Scheduling |            |                |
| • Patient address  | X   |     | X                 | Scheduling |            |                |

| <b>2. Updating Data on Existing Patients</b>  |     |     |                   |                    |            |             |
| A. The user is able to change any user entered data field at any time. Certain data fields can have security protection restricting access to specific users.           | X   |     | X                 | Patient Management |            |             |
| B. An on-line data edit function is available.  | X   |     | X                 | Patient Management |            |             |
| C. For data items selected by the clinic, the system is able to maintain an audit trail record of the changes made to the data items over time.                         | X   |     | X                 | Reporting          |            |             |
| D. The system allows the user to change a patient's name or patient registration number without having to re-register the patient.                                      | X   |     | X                 | Patient Management |            |             |
| E. If a patient's registration record is in use, the system identifies which user/workstation has the record locked.  |     | X   | X                 | All                |            |             |

**PATIENT REGISTRATION FUNCTIONAL REQUIREMENTS  
(CL-2)**

| Requirements   | Vendor Capability |     |     |                           |            |             |
|--|-------------------|-----|-----|---------------------------|------------|-------------|
|  | MIN               | OPT | Yes | Module                    | Future Vn. | Third Party |
| F. The system provides on-line (24x7) access to Medicaid eligibility information. The system will provide the option to update the patient's records based on the eligibility information.   |                   | X   | X   | Interface/W<br>ebsite     |            |             |
| G. The system maintains an inactive/active status on each patient that can be used for scheduling reminders and reporting.   |                   | X   | X   | Patient<br>Managemen<br>t |            |             |
| <b>3. Displaying and Printing Registration Data</b>  |                   |     |     |                           |            |             |
| A. The user is able to display the following types of registration data:   |                   |     |     |                           |            |             |
| • Family rosters   | X                 |     | X   | Reporting                 |            |             |
| • All demographic data for each registered family member   | X                 |     | X   | Reporting                 |            |             |
| • A patient's socio-economic, demographic, and identification number data  | X                 |     | X   | Reporting                 |            |             |
| • Guarantor's name and patient account number  | X                 |     | X   | Reporting                 |            |             |
| • Insurance policy and coverage data on each patient   | X                 |     | X   | Reporting                 |            |             |
| • Patient employer information   | X                 |     | X   | Reporting                 |            |             |
| • The primary site at which the patient receives care  | X                 |     | X   | Reporting                 |            |             |
| B. The system displays comments or flags indicating special conditions associated with the patient or his/her account.   | X                 |     | X   | Reporting                 |            |             |
| C. The system displays account status information (from the Accounts Receivable module) via an account status indicator or code on the patient registration screens.   | X                 |     | X   | Reporting                 |            |             |
| D. The system allows the user to select subsets of patient information (registration and/or clinical) (e.g., patient age range and gender, patients or guarantors in a geographical area, guarantors of patients in selected age and gender group) to produce mail merge files, print form letters, or generate reports. | X                 |     | X   | Reporting                 |            | Crystal     |

**PATIENT REGISTRATION FUNCTIONAL REQUIREMENTS  
(CL-2)**

| Requirements   | Vendor Capability |     |     |                    |            |             |
|--|-------------------|-----|-----|--------------------|------------|-------------|
|  | MIN               | OPT | Yes | Module             | Future Vn. | Third Party |
| <b>4. Global patient identification features are incorporated throughout the modules of the system including the following:</b>  |                   |     |     |                    |            |             |
| A. The user is able to uniquely identify a patient by a current or former medical record number.   | X                 |     | X   | All                |            |             |
| B. An alternative method of identifying a patient is entry of the patient's full or partial name.  | X                 |     | X   | All                |            |             |
| C. When using the name identifier, the user is able to enter the patient's gender, social security number, and/or date of birth to limit the number of matches found in the system.  |                   | X   | X   | All                |            |             |
| D. The full and partial name lookup routines searches for exact matches to the entered spelling and also for phonetic comparables of the entered name or partial name (e.g., soundex).   |                   | X   | X   | All                |            |             |
| E. When age or date of birth is entered, the system locates all patients who acceptably match the name (and optionally gender) specified, and whose age is within a specified number of years of the data entered.   |                   | X   | X   | All                |            |             |
| F. A patient can be identified by his or her prior name (e.g., maiden name) or alternate name (e.g., alias) previously entered into the system.  |                   | X   | X   | All                |            |             |
| G. All patients associated with a given family unit or guarantor can be displayed under the head of household or guarantor.  | X                 |     | X   | All                |            |             |
| H. The system allows the user to interrupt an incomplete patient registration process, switch to another module such as scheduling or accounts receivable, perform activities in the active module, and return to the registration module at the point in the registration process when interrupted. |                   | X   | X   | All                |            |             |
| I. The system allows the user to print the registration screen via a screen dump to a local printer.   |                   | X   | X   | Patient Management |            |             |

| F. The system allows adding and changing chronic care diagnosis codes.  |     | X   | X                 | Financial Processing    |            |             |
| G. The system supports a comprehensive user-defined patient follow-up function generating letters to physicians, clinics, hospitals, etc., for the purpose of collecting disease-specific patient data from external sources. |     | X   | X                 | Form Generation in Word |            |             |

**PATIENT FOLLOW-UP MONITORING/TRACKING  
FUNCTIONAL REQUIREMENTS (CL-4)**

| Requirements   |     |     | Vendor Capability |                                  |            |             |
|--|-----|-----|-------------------|----------------------------------|------------|-------------|
|  | MIN | OPT | Yes               | Module                           | Future Vn. | Third Party |
| <b>1. Input Process</b>  |     |     |                   |                                  |            |             |
| A. The user can enter a follow-up date for the patient when entering the patient's encounter data.   | X   |     | X                 | Scheduling or Patient Management |            |             |
| B. The user can enter the date of the next compliance protocol issue for any number of wellness and chronic care guidelines when entering patient encounter data.  |     | X   |                   |                                  |            | X EMR       |
| C. The system calculates the date of the next compliance protocol issue for any number of wellness and chronic care guidelines when entering patient encounter data.   |     | X   |                   |                                  |            | X EMR       |
| D. The system provides case management features allowing the user to define and track multiple patient registries.   |     | X   |                   |                                  |            |             |
| E. The system allows the user to define, track, and report on any data element or combination of data elements associated with patients. This tracking can be over an arbitrary length of time and can be plotted over time. |     | X   | X                 | Reporting                        |            |             |
| F. The system allows the user to create data files that supplement patient registration and encounter information and to link these files to the patient's registration record for retrieval and reporting.                  | X   |     | X                 | Patient Management               |            |             |
| G. All patients associated with a specific chronic care condition can be listed and sub-grouped by other identifiers (e.g., last visit date, last lab test results and dates, etc.).   |     | X   | X                 | Patient Management               |            |             |
| H. The system calculates the date of the next follow-up action based on the date of the last information on file (user-defined).   |     | X   | X                 | Collections                      |            |             |
| <b>2. Output Reports</b>   |     |     |                   |                                  |            |             |
| A. Unless otherwise specified, all output reports list patients by home clinic (the clinic where the patient usually receives care).   | X   |     | X                 | Reporting sort criteria          |            |             |

**PATIENT FOLLOW-UP MONITORING/TRACKING  
FUNCTIONAL REQUIREMENTS (CL-4)**

| Requirements   |     |     | Vendor Capability |                           |            |             |
|--|-----|-----|-------------------|---------------------------|------------|-------------|
|  | MIN | OPT | Yes               | Module                    | Future Vn. | Third Party |
| B. Patients are identified by name and identification number on the reports.   | X   |     | X                 | Reporting                 |            |             |
| C. The system can produce mailing labels for a user-selected group of patients.  | X   |     | X                 | Reporting                 |            |             |
| D. The system can produce groupings of patients on any data parameter (and on collections of data parameters) using Boolean logic. Selection is available using the following operators:   | X   |     | X                 | Report selection criteria |            |             |
| <ul style="list-style-type: none"> <li>• Equals, less than, greater than, greater than or equal, less than or equal, not equal</li> </ul>  | X   |     | X                 | Report selection criteria |            |             |
| <ul style="list-style-type: none"> <li>• Within a range</li> </ul>   | X   |     | X                 | Report selection criteria |            |             |
| <ul style="list-style-type: none"> <li>• First, last occurrence</li> </ul>   | X   |     | X                 | Report selection criteria |            |             |
| <ul style="list-style-type: none"> <li>• Nth occurrence</li> </ul>   | X   |     | X                 | Report selection criteria |            |             |
| <ul style="list-style-type: none"> <li>• NOT, AND, OR, with nesting to five (5) levels</li> </ul>  | X   |     | X                 | Report selection criteria |            |             |
| E. On a periodic basis, the system generates a Missed Referral report of all patients who had been referred to another section of the clinic and (n) days after the referred date had not yet been seen by the other section. The user can set the value of "n." | X   |     | X                 | Reporting                 |            |             |
| F. The system generates the Missed Referral report per the specifications cited above, but lists the patients by provider or section to which the patient was referred.  |     | X   | X                 | Reporting                 |            |             |

**PATIENT FOLLOW-UP MONITORING/TRACKING  
FUNCTIONAL REQUIREMENTS (CL-4)**

| Requirements  | Vendor Capability |     |     |           |            |             |
|---|-------------------|-----|-----|-----------|------------|-------------|
|   | MIN               | OPT | Yes | Module    | Future Vn. | Third Party |
| G. Under user control, the system generates a report of all patients who are delinquent in any evidence-based care guidelines or standardized wellness procedures (e.g., immunizations, HbA1c tests for diabetics, PAP smears, mammograms, well baby checks). The needed procedures are listed on the report. | X                 |     | X   | Reporting |            |             |
| H. Under user control, the system generates reminder letters for all patients who are delinquent in their scheduled treatments, tests, or consultations (e.g., immunizations, HbA1c test, etc.).  | X                 |     | X   | Recalls   |            |             |
| I. The user may edit the reminder letter.   | X                 |     | X   | Recalls   |            |             |
| J. If the Scheduling module is not used, on a periodic basis the system generates a Missed Appointment report of all patients who have not returned for a follow-up visit within “n” days or weeks or the visit date. The value of “n” can be set by the user.  |                   | X   |     |           |            |             |
| K. Under user control, the system generates a report of all patients who have abnormal laboratory results.  |                   | X   | X   | Reporting |            |             |
| L. Under user control, the system generates a report on all patients who have been identified as having a high risk medical condition.  |                   | X   | X   | Reporting |            |             |
| M. The system produces a “report” for the patient to bring them into their own care and to let them know how they are doing. The report includes pertinent test results, referrals, self-management goals, educational sessions, etc.   |                   | X   |     |           |            | X EMR       |

|   | MIN               | OPT | Yes | Module    | Future Vn. | Third Party |
| J. The system produces a Fee Comparison report that enables the practice to compare its reimbursements from insurance carriers for service procedures to Medicare and McGraw-Hill relative value units. This report allows the practice to evaluate the profitability of participation in the managed care plan.  |                   | X   | X   | Reporting |            |             |
| K. The system produces a Services Summary report that lists service procedures performed in a user-selected date range by site, provider, and plan. The report calculates the expected payments based on the Medicare Resource Based Relative Value Units and the count of service procedures.  |                   | X   | X   | Reporting |            |             |
| L. The system produces a Capitation analysis report by doctor and plan summarized by month for the current fiscal year. The report shows total members seen per month, total visits by patient per month, the standard fee, the average fee per visit, the co-pay amounts paid by patients, the capitation payment, the total payment, the average net revenue per visit, the collection rate, the average number of visits per member, and the year-to-date average for each category. | X                 |     | X   | Reporting |            |             |
| M. The system produces a Capitation Payment by Provider Report that shows the income expected from a plan based on the number of members enrolled in the plan assigned to the provider and the capitation rate.   | X                 |     |     |           |            |             |
