

Copy or print this page as many times as necessary to make three variants of a five-year projection.

AGE DISTRIBUTION TABLE

Variable _____

(This table will be most useful for distribution of Total Fertility Rates or Net Reproduction Rates by age (only ages 15-49), distribution of Net Migration across age groups, and (for the initial year only: 2000) age distribution of population for both males and females – (use two columns).

AGE	2000	00-05	05-10	10-15	15-20	20-25	25-30	30-2035
0-4								
5-9

45-49								
50-54								
55-59								
60-64								
65-69								
69-74								
75+								

5-YEAR AGGREGATE ESTIMATES

Use this table to record year 2000 values and estimate the following variables for each 5-year period: Life Expectancy at birth for males and for females, Total Fertility Rate or Net Reproduction Rate (NRR is # surviving girl babies per woman), and separately male and female Net Migration, which may be a negative number (for countries losing population to migration).

VAR	2000	00-05	05-10	10-15	15-20	20-25	25-30	30-2035
