Maximise your control

When security has top priority, compromise is not an option. Highly efficient and ergonomic workplaces are a must today, and smart technology is the key. The WEY Multifunctional MK Keyboard enables the intuitive control of complex systems.

One Keyboard – Maximum Functionality

The WEY MK Keyboard is perfect for the secure, comfortable and efficient Command and Control Centre environment. Operators can manage all their local and remoted computers with a single keyboard and mouse. Multiple consoles have become superfluous. The WEY MK Keyboard guarantees instantaneous access to Keyboard, Video, Mouse and Audio (KVMA) signals in brilliant quality. Complex processes and sensitive data always remain under control – regardless of

whether you follow the action on your desk screens, video wall or directly on the keyboard's built-in LCD display. Chaotic desktops belong to the past!

The functionality of the WEY MK knows no limits. Integration of additional systems such as facility entry control, lighting, shutters and blinds, etc. is easily accomplished. In short, consolidating consoles into a single multifunctional keyboard creates powerful and state-of-the-art workplaces with short reaction times and efficient workflows. Ideal for the management of your 24/7 operational centre.

Ergonomic and Efficient

The multifunctional WEY MK Keyboard provides instantaneous access to all available systems and facilitates user control. Simply toggle back and forth between sources on the keyboard! A wide variety of accessories such as specialised function keys, hotkeys and touchpads provide ergonomic user interfaces and optimise incident management.

In addition to user-friendliness, the WEY MK Keyboard is characterised by its adaptability to any environment. It can be expanded modularly, it is robust and fail-safe, and it can be tailored and programmed to meet customer specific requirements. Further, the MK can be deployed independent of operating system, computer type, interfaces and software platforms.

Enhanced Control through Shared Access

Workstations in control rooms can easily be shared among multiple users by linking keyboards together in pairs or in a group. This means that workstations can be pooled and accessed by users quickly and efficiently, enhancing teamwork and control.

In combination with a WEY Allocation System (KVM-Switch), the number of users can be increased as required. The data and video signals from remoted

computers are switched via the Allocation System and transmitted without loss of quality over structured cabling to the workplaces. This provides optimum control and flexibility.

For World Class , the solution is WEY!

Highlights

- Control over multiple computers
- Facilitates sharing of PCs among users
- Supporting numerous interfaces (serial, PS2, USB, Ethernet, audio, composite video)
- 24-bit colour LCD display
- All keys and optional keypads individually programmable on multiple layers

- Acoustic and visual output of alarm signals
- Touch-sensitive display panels
- Linked to auxiliary devices such as door control, etc.
- Enhanced interactivity with optional software modules (Focus, Mouse Switch)
- Available in a variety of designs (brushed aluminium, carbon, RAL colours)
