- Cystic Fibrosis (CF) is one of the UK's most common life-threatening inherited diseases affecting over 9,000 babies, children and young adults.
- CF affects vital organs in the body, especially the lungs and digestive system, by clogging them with thick, sticky mucus.
- Each week five babies are born with Cystic Fibrosis and two young lives are lost. There is presently no cure.
- Only half of those living with Cystic Fibrosis are likely to live past their late 30s.
- 1 in 25 of us carries the faulty CF gene
- The Cystic Fibrosis Trust funds research aimed at understanding, treating and curing Cystic Fibrosis.
- The Cystic Fibrosis Trust is the only national charity dedicated to all aspects of Cystic Fibrosis.

***Gift Aid:** Please tick the **Gift Aid** box, if you are a UK taxpayer, next to your donation to authorise the Cystic Fibrosis Trust to claim an extra 25p per £1 donated on this and all future donations from the date of this declaration and four years prior to this year.

To qualify for Gift Aid, what you pay in income tax or capital gains tax must at least equal the amount that the charity will reclaim on the donation.

Note to Participant: While anyone can sponsor you, the charity may not be able to claim Gift Aid from all your sponsors, for example family members or if you have received a benefit by participating. For further information please see www.cftrust.org.uk/help/giftaid
