DOGM GRAPHIC SERIES 132x32 DOTS

EA DOGM132W-5 +EA LED55x31-A

TECHNICAL DATA

EA DOGM132W-6 +EA LED55x31-W

* HIGH-CONTRAST LCD SUPERTWIST DISPLAY (STN AND FSTN) WITH 15µm DOT GAP

100,000

- * OPTIONAL LED BACKLIGHTS IN VARIOUS COLORS
- * 132x32 PIXELS (CORRESPONDS TO 4x22 CHARACTERS OR 2x16 LARGE CHARACTERS)
- * ST 7565R CONTROLLER WITH SPI (4-WIRE) INTERFACE
- * POWER SUPPLY: SINGLE SUPPLY 2.4..3.3V (TYPICALLY 140μA)
- * NO ADDITIONAL VOLTAGES REQUIRED
- * OPERATING TEMPERATURE RANGE -20°C TO +70°C (STORAGE -30°C TO +80°C)
- * LED BACKLIGHTING 5..45mA
- * NO MOUNTING REQUIRED: SIMPLY SOLDER ONTO PCB

ORDERING CODE

GRAPHICS DISPLAY, 132x32, 55x31mm

- *x*: *W* = white background (FSTN pos. transflective)
 - E =yellow/green background (STN pos. transmissive)
 - **B** = blue background (STN neg. transmissive)
 - S = black background (FSTN neg. transmissive)
- L = yellow/green background (STN pos. reflective, cannot be backlit)
- LED BACKLIGHT, WHITE
- LED BACKLIGHT, YELLOW/GREEN
- LED BACKLIGHT, BLUE
- LED BACKLIGHT, RED
- LED BACKLIGHT, AMBER
- LED BACKLIGHT, FULL COLOR RGB

ACCESSORIES

USB TEST BOARD FOR PC (WINDOWS) SOCKET CONNECTOR 4.8 mm HEIGHT (2 PCS. REQUIRED) DISK WITH 10 CHARACTER SETS e.g. 6x8, 8x8, 8x16, CYRILLIC

EA DOGM132

The EA DOGM132, a 132x32-pixel graphics display, is a new addition to ELECTRONIC ASSEMBLY's EA DOGM series. It, too, has pins that allow it to be mounted quickly and easily. 6 different optional LED backlights are available. These can be combined with 5 different display technologies, making it possible to have up to around 20 different designs. Designed for compact, handheld devices, this modern LCD series offers a number of benefits with and without backlighting:

- * Extremely compact (55x31 mm) with a large viewing area of 51x15 mm
- * Super-flat: 2.0 mm without backlight module, and only 5.8 mm with a b./l. module mounted
- * Serial SPI interface (4-wire)
- * Single supply +2.4 V or +3.3 V
- * Typical power consumption of only 140 μ A in full operation (white LED backlight from 5mA)
- * Easily mounted by soldering
- * Wide range of design variants orderable as single units
- * Backlighting color changes possible

CONTRAST ADJUSTMENT

The contrast can be set by means of a command for all the displays in the EA DOGM series. The contrast setting of the display must be set once by the software, and is then kept constant throughout the entire operating temperature range $(-20..+70^{\circ}C)$, thanks to the integrated temperature compensation.

LED BACKLIGHT

6 different variants are available for individual backlighting: white, yellow/green, blue, red, amber and a full-color version.

There are 2 separate LED paths available for each monochrome backlight that can be switched in parallel or in series to suit the system voltage. This means that most backlights can be run at either 3.3 V or 5 V.

To operate the backlight, we recommend a current source (e.g. CAT4238TD) or an external series resistor to limit the current. This can be calculated from R=U/I; you can find the values in the table on the right. To prolong the life of the backlights, we recommend that you use a current source.

The operating life of the yellow/green, red and amber backlights is 100,000 hours. The life of the white and blue backlights is considerably shorter. We recommend that you dim these or switch them off whenever possible.

Important: Never connect the backlight LEDs directly to a 5 V/ 3.3 V supply as this will immediately destroy the LEDs. Always use a current source. Please note that derating applies at temperatures exceeding +25°C.

ASSEMBLING

First, clip the display and backlight modules together by gently pushing the display pins through the corresponding holes on the backlight module. Then insert the entire module into the socket, or into the soldering holes on the pcb. The backlight pins (the 2 rows with 3 pins at the bottom) must be soldered on the top side as well to ensure good contact between the modules.

<u>Important:</u> The display has a protective film on the top and/or the bottom, and there is also one on the backlight. These must be removed.

Make sure that neither display nor backlight will never come into contact with any kind of liquid like Fluxer, Cleaner, Water.

5 DIFFERENT TECHNOLOGIES

See below for an overview of available technologies, combinations with available backlights and their usability:

| Display | Technology | Optional backlight | Readability | Display color non backlighted | Display color with backlight | Required backlight |
|---------|---|---|--|-------------------------------------|--|----------------------------|
| | EA DOGM132W FSTN pos. transflective | usage is possible with and without backlight module | even without backlight readable | black on white | black on backlight color | white, blue, amber, RGB |
| | EA DOGM132E STN pos. yellow/green transmissive | backlight module is necessary | even without backlight readable | dark green on yellow/green | black on yellow/green | yellow/green |
| | EA DOGM132B STN neg. blue transmissive | backlight module is necessary | | | backlight color on blue~black background | white, yellow/green |
| | EA DOGM132S FSTN neg. transmissive | backlight module is necessary | | | backlight color on black background | white, amber, RGB |
| | EA DOGM132L STN pos. yellow/green reflective | no backlight possible | good at "normal" ambient brightness | dark green on yellow/green | | |

6 AND MORE DIFFERENT BACKLIGHTS

6 and more different backlight colors are available to match equipments design as much as possible. The most effective and brightest one is the white one EA LED55x31-W.

If you see black and white pictures on this page but you want to see the colors of the displays, you can download a full-colored version of this document at

http://www.lcd-module.de/eng/pdf/grafik/dogm132-5e.pdf

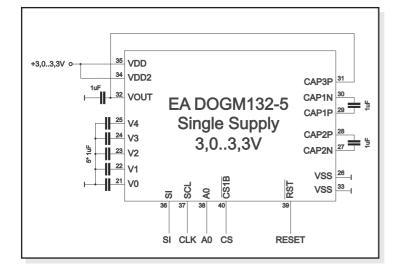

EADOGM132-5

Page 4

APPLICATION EXAMPLES

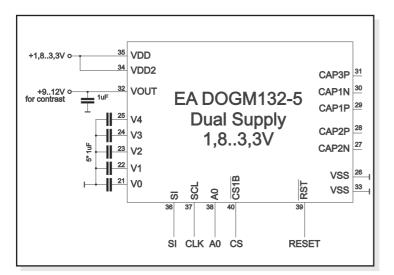

LOW POWER

+3.0V or +3.3V (single supply) operation requires 8 external capacitors. Current consumption typ. 110uA

WIDE RANGE

The operation on +2.4..+3.3V (single supply) requires 9 external capacitors. Current consumption is typ. 150uA.

LOW VOLTAGE

If an external source of +9..+12V (does not have to be stabilized) is available, the charge pump is not needed and less external components are required. Supply and logic voltage may be 1.8..3.3V

DATA TRANSFER

Data transfer is unidirectional. That means that data can only be written; it cannot be read again. In contrast to other displays, a busy query is not necessary with this display. The clock-pulse rate of the SCL line can be up to 20 MHz @3.3V, depending on the supply voltage. You will find more detailed information on timing on pages 64 and 65 of the data sheet of the ST7565R controller, which you will find on our website at http://www.lcd-module.de/eng/pdf/zubehoer/st7565r.pdf

ELECTRONIC ASSEMBLY reserves the right to change specifications without prior notice. Printing and typographical errors reserved.

12:00 VIEWING ANGLE, TOP VIEW OPTION

If the display is read mostly from above (on the front of a laboratory power supply unit, for example), the preferred angle of viewing can be set to 12 o'clock. This rotaties the display by 180°. A slightly different initialization setup is required for this. Also keep in mind that the leftmost column (normally numbered as 0) will now change to 4.

Orientation for 12 o`clock (Top View)

USB-TEST BOARD EA 9780-1USB

For easy startup, a USB test board is available that can be connected to a PC. A USB cable and Windows software is supplied with the product. This allows text and images (BMP) to displayed directly on the connected display. You will find more information on the test board in the EA 9780-1USB data sheet.

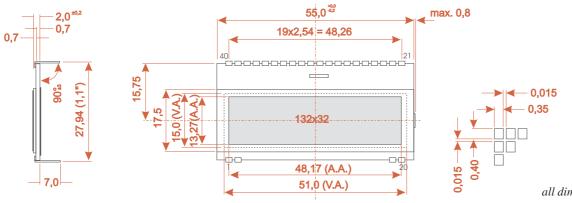

SIMULATION WITH WINDOWS

A simulator window also displays the contents of the display. The software can simulate all the displays and colors even without the hardware. You can download the software free from our website: http://www.lcd-module.de/deu/disk/startdog.zip

Note:

- LC displays are generally not suited for wave or reflow soldering. Temperatures of over 80°C can cause lasting damage.
- The surfaces of the displays and backlights are protected from scratching by self-adhesive protective foils. Please remove these before mounting.
- Make sure that either display nor backlight will never come into contact with any kind of liquid like Fluxer, Cleaner, Water.

soldered from above to ensure good contact.
