VARICELLA CASE NOTIFICATION MESSAGE MAPPING GUIDE VERSION 2.0

1 INTRODUCTION

This Message Mapping Guide describes the content and message mapping specifications for the limited set of data elements used to communicate information to meet the requirements for Varicella Individual Case reporting to CDC. The intended audiences for this document are the state/local and CDC programs and other public health related organizations interested in using the HL7 V2.5 case notification message specification for transmitting their data elements.

Version 2.0 of the National Notification Message Structure Specification is used to inform the mapping methodology for this guide. The ORU^ R01 - Unsolicited Observation Message is the HL7 standard message used to pass the Nationally Notifiable Condition Report message. The National Notification message is used to convey a de-identified subset of investigation/surveillance information to meet national reporting requirements, where CDC is the only receiver. This document specifies the structure and methodology for the use of the Health Level 7 (HL7) Version 2.5 Unsolicited Result Message (ORU^ R01) that supports the electronic interchange of any Nationally Notifiable Condition message from public health entities to the CDC.

3 DATA ELEMENT TO MESSAGE MAPPINGS

This section provides the data elements of interest cross-referenced to the HL7 messaging context. The Program Variables Section has the same information as the Data Element index. The Message Mapping Methodology Section specifies how the data element is conveyed in an HL7-compliant manner.

3.1 KEY

The column headers and their definitions are as follows:

Column	Description
Program Variables Section	
PHIN Variable ID	PHIN data element identifier drawn from the coding system PH_PHINQuestions_CDC.
Label	Short name for the data element, which is passed in the message.
Description	Description of the data element. It may not match exactly with the description in PHIN Questions, because there may be local variations on the description that do not change the basic concept being mapped to the PHIN Question identifier.
Data Type	Data type for the variable response expected by the program area. Data Types are Coded, Numeric, Date or Date/time, and Text.
CDC Priority	Indicator whether the program specifies the field as: R - Required - Mandatory for sending the message/will error message out P - Preferred - This is an optional variable and there is no requirement to send this information to CDC. However, if this variable is already being collected by the state/territory or if the state/territory is planning to collect this information because it is deemed important for your own programmatic needs, CDC would like this information sent. CDC preferred variables are the most important of the optional variables to be earmarked for CDC analysis/assessment, even if sent from a small group of states. O - Optional - This is an optional variable and there is no requirement to send this information to CDC. This variable is considered nice-to-know if the state/territory already collects this information or is planning to collect this information, but has a lower level of importance to CDC than the preferred classification of optional data elements.
May Repeat	Indicator whether the response to the data element may repeat. "Y" in the field indicates that it may repeat. If the program does not indicate the response can repeat, the field is not populated or contains "N". Repeats require special processing.
Value Set Name	Name of the pre-coordinated value set in PHIN-VADS from which the response is drawn. The value sets and coding systems are accessible via the Public Health Information Network Vocabulary Access and Distribution Services (PHIN VADS).
Value Set Code	Code for the pre-coordinated value set in PHIN-VADS from which the response is drawn.

VARICELLA CASE NOTIFICATION MESSAGE MAPPING GUIDE V 2.0

Column	Description
Message Mapping Methodology Section	
Message Context	Specific HL7 segment and field mapping for the element.
HL7 Data Type	HL7 data type used by PHIN to express the variable. Datatypes expected are CWE, SN, DT, ST, TX, XPN, XTN, or XAD, depending on the type of data being passed.
HL7 Optionality	Indicates if the field is required, optional, or conditional in a segment. The only values that appear in the Message Mapping are: <ul style="list-style-type: none"> • R – Required. Must always be populated • O – Optional. May optionally be populated.
Implementation Notes	Related implementation comments.

3.2 SUBJECT-RELATED DATA ELEMENT MAPPINGS

This section provides the mapping methodology for the demographic variables requested by the program. These subject-related surveillance elements are generally reported in the PID segment as attributes or they map as observations under the first OBR that identifies Subject Type in OBR-4.

Coded	P	Y	Race Category	PHVS_RaceCategory_CDC	PID-10 Race (does not pass Variable ID or label)	CE	O	To send an "Unknown" because the application allows Unknown to be selected (that is, not as a default value): PID-10 would appear as UNK^Unknown^

3.5 NOTIFICATION STRUCTURE DATA ELEMENT MAPPINGS

This tab provides the structural elements for the Notification. These variables are not negotiable. Default values are provided for HL7 structural elements that are required but not part of the surveillance data requested. Note that this tab does not describe all of the components required for a structurally valid HL7 message; see National Notification Structural Specification (profile).

Generic Surveillance Variables								Mapping Methodology			
PHIN Variable ID	Label/Short Name	Description	Data Type	CDC Priority	May Repeat	Value Set Name	Value Set Code	Message Context	HL7 Data Type	HL7 Optionality	Implementation Notes
NOT108	Notification ID	The unique identifier for the notification record.	Text	R				MSH-10-Message Control ID.	ST	R	If notification ID is not unique, a timestamp may be appended. HL7 recommended size increased to 50.
NOT114	Receiving Application	CDC's PHIN Common Data Store (CDS) is the Receiving Application for this message.	OID	R				MSH-5 Receiving Application. PHIN required/HL7 optional.	HD	R	Literal Value: 'PHINCDS^2.16.840.1.114222.4.3.2.10^ISO'
NOT115	Message Profile ID	First instance is the reference to the structural specification used to validate the message. Second instance is the reference to the PHIN Message Mapping Guide from which the content is derived.	Text	R	Y/2			MSH-21-Message Profile ID. PHIN required/HL7 optional.	EI	R	First instance literal value: 'NND_ORU_v2.0^PHINProfileID^2.16.840.1.114222.4.10.3^ISO' Second instance literal value: 'Var_Case_Map_v2.0^PHINMsgMapID^2.16.840.1.114222.4.10.4^ISO'.
DEM197	Local patient ID	The local ID of the patient/entity.	Text	R				PID-3.1 Patient Identifier List – ID Number PID-3.4 Assigning Authority format <localID&OID&ISO> Does not pass Variable ID or label.	CX	R	Only the sending system's internally assigned patient id used for these de-identified messages

DEM100	Patient name type	Name is not requested by the program, but the Patient Name field is required to be populated for the HL7 message to be valid. Text	R				OBR-3-Filler Order Number where OBR-3.1 is the internally assigned case/investigation ID, OBR-3.3 is the OID for sending application as assigning authority, and OBR-3.4 is the literal value 'ISO'.	EI	R	<same value in each OBR instance>
NOT099	Subject Type	Type of subject for the notification (person, place, or non-person living subject are the appropriate subject types for Case Notifications).
