

CHEMICAL ASTHMA HAZARD ASSESSMENT PROGRAM
Evaluation Questionnaire

1. Asthma Hazard Index of Chemical:
CAS number, IUPAC name, or if deemed confidential the name / CAS number of the closest analogue (indicating which moiety is different from the actual chemical entered)

2. Reason for submitting chemical to the Prediction model

- Novel chemical being introduced to industrial process
- Possible case of asthma in worker exposed to the chemical
- For hazard data in risk assessment process
- Random chemical to familiarise with how the program works
- Other

3. Action taken with positive result (hazard index >0.5)

- None
- Chemical not used in process (eliminated/substituted)
- Hazard information used in medical investigation of suspected case
- More stringent risk management
- Health surveillance of exposed workers
- Other

4. Action taken with negative result (hazard index <0.5)

- None
- Chemical used in process in preference to potentially hazardous one
- Reassurance of workers exposed to it
- Other

5. Contact details (recommended but optional)
