# Infant CPR Skills Testing Checklist (1 of 2)

**life** is why™

Student Name	Date of lest
Hospital Scenario: "You are working in a hospital or clinic when shouts, 'Help me! My baby's not breathing.' You have gloves a semergency response system and to get the emergency equipn	and a pocket mask. You send your coworker to activate the
Prehospital Scenario: "You arrive on the scene for an infant who you approach the scene and ensure that it is safe. Demonstrate	· · · · · · · · · · · · · · · · · · ·
Assessment and Activation  ☐ Checks responsiveness ☐ Shouts for help/Activates emerg ☐ Checks pulse	gency response system   Checks breathing
Once student shouts for help, instructor says, "Here's the barrier o	device."
Cycle 1 of CPR (30:2) *CPR feedback devices preferre	ed for accuracy
<ul> <li>Infant Compressions</li> <li>□ Performs high-quality compressions*:</li> <li>• Placement of 2 fingers in the center of the chest, just below the nipple line</li> <li>• 30 compressions in no less than 15 and no more than 18 seconds</li> <li>• Compresses at least one third the depth of the chest, about 1½ inches (4 cm)</li> <li>• Complete recoil after each compression</li> </ul>	Infant Breaths  ☐ Gives 2 breaths with a barrier device:  • Each breath given over 1 second  • Visible chest rise with each breath  • Resumes compressions in less than  10 seconds
Cycle 2 of CPR (repeats steps in Cycle 1) Only cl  ☐ Compressions ☐ Breaths ☐ Resumes compression	heck box if step is successfully performed ns in less than 10 seconds
Rescuer 2 arrives with bag-mask device and begins ventilation what ands technique.	ile Rescuer 1 continues compressions with 2 thumb–encirclin
Cycle 3 of CPR	
Rescuer 1: Infant Compressions  ☐ Performs high-quality compressions*:  • 15 compressions with 2 thumb–encircling hands technique  • 15 compressions in no less than 7 and no more than 9 seconds  • Compresses at least one third the depth of the chest, about 1½ inches (4 cm)  • Complete recoil after each compression	Rescuer 2: Infant Breaths This rescuer is not evaluated.

# Infant CPR Skills Testing Critical Skills Descriptors

- Assesses victim and activates emergency response system (this must precede starting compressions) within a maximum of 30 seconds. After determining that the scene is safe:
  - Checks for responsiveness by tapping and shouting
  - Shouts for help/directs someone to call for help and get emergency equipment
  - Checks for no breathing or no normal breathing (only gasping)
    - Scans from the head to the chest for a minimum of 5 seconds and no more than 10 seconds
  - Checks brachial pulse
    - Can be done simultaneously with check for breathing
    - Checks for a minimum of 5 seconds and no more than 10 seconds

### Performs high-quality chest compressions during 1-rescuer CPR (initiates compressions within 10 seconds of identifying cardiac arrest)

- · Correct placement of hands/fingers in center of chest
  - 1 rescuer: 2 fingers just below the nipple line
- Compression rate of 100 to 120/min
  - Delivers 30 compressions in 15 to 18 seconds
- Adequate depth for age
  - Infant: at least one third the depth of the chest (about 1½ inches [4 cm])
  - Use of a commercial feedback device or high-fidelity manikin is highly recommended
- Complete chest recoil after each compression
- Appropriate ratio for age and number of rescuers
  - 1 rescuer: 30 compressions to 2 breaths
- Minimizes interruptions in compressions
  - Delivers 2 breaths so less than 10 seconds elapses between last compression of one cycle and first compression of next cycle

#### 3. Provides effective breaths with bag-mask device during 2-rescuer CPR

- Opens airway adequately
- · Delivers each breath over 1 second
- Delivers breaths that produce visible chest rise
- Avoids excessive ventilation
- Resumes chest compressions in less than 10 seconds
- 4. Switches compression technique at appropriate interval as prompted by the instructor (for purposes of this evaluation). Switch should take no more than 5 seconds.

### 5. Performs high-quality chest compressions during 2-rescuer CPR

- Correct placement of hands/fingers in center of chest
  - 2 rescuers: 2 thumb-encircling hands just below the nipple line
- Compression rate of 100 to 120/min
  - Delivers 15 compressions in 7 to 9 seconds
- Adequate depth for age
  - Infant: at least one third the depth of the chest (about 1½ inches [4 cm])
- · Complete chest recoil after each compression
- Appropriate ratio for age and number of rescuers
  - 2 rescuers: 15 compressions to 2 breaths
- Minimizes interruptions in compressions
  - Delivers 2 breaths so less than 10 seconds elapses between last compression of one cycle and first compression of next cycle
