

# Solar PV and Bulk Metered Sites

This information sheet has been designed to provide you with information about dwellings within your site that may be considering or have already installed Solar PV.

When Solar PV is installed, the customer is required to obtain permission from ENERGEX to connect the Inverter Energy System to export energy to the network. This is done by entering into a Network Connection Agreement (the Agreement) and it is a requirement that the Agreement is with the account holder for the property. As you have been identified as the account holder, this Agreement needs to be in your name and signed by you.

The Agreement needs to list the inverter/s that has/have been installed, along with the total combined capacity of the inverter/s and the Network Tariff Code that will be applied to your account.

If an installer has signed up a number of dwellings within your site at one time, we have requested that they submit one application with all properties listed. We will then send you an Agreement listing this information. If after the Agreement is signed and returned further dwellings sign up, we will be required to send you a new Agreement with the updated information, including the new combined inverter capacity and request your signature.

Although we have requested, where feasible, installers submit one application at the same time to minimise the number of Agreements that we send you, there may be times when different installers are engaged and therefore this won't be possible.

If your site has contestable metering, any changes to your metering will need to be actioned by your metering service provider via your electricity retailer.

If you would like further information regarding this information sheet please call ENERGEX on 13 12 53 or email [custserve@energex.com.au](mailto:custserve@energex.com.au).
