

EPA Public and Commercial Building Contractor Survey Questionnaire

This is the telephone interview version that can be transformed to a Web version with the appropriate modifications to text and format. Note that the yellow highlighted words indicate those words where respondents will see definitions if they hover over the word with their mouse. The current thinking is that the survey will be mixed-mode with phone and web. We are expecting that cooperation is going to be a challenge with our target population. Based on our experience with establishment surveys, we believe that making calls will be necessary to improve our response rate. However, some respondents will prefer to respond over the web. Furthermore, the web versions will be easier to administer to larger firms where more than one person may be needed to respond to all the questions.

Hello, my name is _____. I am calling from Abt SRBI, a research company based in New York City. We are conducting a study for the U.S. Environmental Protection Agency about renovation, repair, and painting work.

EPA is doing this study to learn about the kinds of work and work practices renovators are doing. You may have seen a letter EPA sent out earlier that explains this.

Your company was selected at random to be included in an interview. Participation is voluntary, and your responses are completely anonymous. Your company name and your name are confidential and will never be revealed to the EPA. It would be helpful to me if you could answer two or three preliminary questions to see if you would qualify for the study.

It appears that you are eligible for this study. The remaining questions will take about 30 minutes to answer but I'll go as quickly as I can to see if we can finish sooner. I appreciate your helping us with this today.

Q4

Everything I am asking about is only for projects in the past 12 months. When a job involved multiple buildings, count each building as a separate project. Is this clear about buildings and projects?

[CONTINUE]

If a single project involved more than one kind of work, include it separately in each work category I ask about. I want to know about how many of the projects involved disturbing painted surfaces. By disturbing painted surfaces, I mean any activity that can create paint dust or paint chips. For example, disturbing paint includes sanding or scraping a painted surface or using a power washer or other means to remove loose paint; cutting open a painted wall to make repairs or install new equipment; or removing a painted component such as trim or a window frame.
