*A Public Agenda for Illinois
Higher Education: Planning for
Career and College Success*

Observations and Findings
Regarding Public Needs

March 6, 2008

INTRODUCTION

This document contains the results of the initial round of analyses performed by the National Center for Higher Education Management Systems (NCHEMS) as background for identifying strategic priorities to be addressed by higher education to improve the circumstances of Illinois and its citizens. Additional analyses will be performed as follow-up.

PRIMARY OBSERVATIONS

The following key observations are derived from the analytic findings:

1. The population of Illinois is projected to grow much more slowly than is the case for most other states and the country as a whole (page 3). The growth that is projected will be found almost exclusively in the Northeast region of the state (page 4). Populations in all other regions of the state will be essentially stagnant. The working-age population will be comprised increasingly of minorities (page 5). Only among retirees will whites be the fastest growing subpopulation. Minority populations are heavily concentrated in the Northeast Region of the state.
2. The population of Illinois is reasonably well educated, ranking 17th among the states in the proportion of young adults (through ages 25-54) who have an associate or higher degree (page 10). It ranks 12th in the proportion of the working-age population with a baccalaureate or graduate degree; only 27th in the proportion with an associate degree (page 12). It has a lower proportion with high school or less and higher proportion with college educations than the U.S. average (page 13). While Illinois compares favorably to the U.S. as a whole, it compares less favorably to international competitors (page 11).
3. The average education data mask substantial differences between the races, with whites being considerably better educated than their minority counterparts (pages 14-16). Education attainment also varies considerably from one region of the state to another with the highest educational attainment found in the Chicago suburbs and McLean and Champaign counties and the lowest on the south side of Chicago and in some of the more rural parts of the state (page 24).
4. The economy of Illinois mirrors closely that of the nation as a whole (page 27). However, it has been growing much more slowly than the economies of most other states (page 28).
5. The kinds of jobs typically most desirable and lucrative—those in management and professional occupations—are held by residents of very few parts of the state, primarily those in the Chicago suburbs and around Champaign-Urbana (page 33). Growth in jobs requiring postsecondary training is projected to be lower than in all but seven other states (page 34). The occupations in which desirable jobs will be growing are those in:
 - Nursing and other health professions
 - Computer specialists

- Teachers
- Accountants and auditors
- Vehicle repair technicians

(Pages 36-37)

Many of these are fields in which demand exceeds in-state supply (page 38).

6. Illinois' economy has been sufficiently strong to allow its citizens to enjoy a per capita income in excess of the national average. While above the national average, the state's per capita income has shown a steady, long-term decline (page 39). Income varies greatly from one part of the state to another—highest in the suburban areas of the Northeast Region and lowest in the southern and eastern parts of the state (and of the Northeast Region) (page 40).
7. Earnings are higher in Illinois than the national average at every level of educational attainment. The economic benefits of postsecondary education vary widely from one region of the state (from \$0 to nearly \$30,000 for an associate degree and from \$1,600 to \$67,000 for a bachelor's degree). The economic benefits are greatest in those areas with the greatest concentration of managerial and professional jobs (pages 33, 42-44).
8. Illinois outperforms the nation as a whole at every stage of the education pipeline. However, Illinois is substantially below the best-performing states at every stage of the pipeline (page 46). Minorities (except for Asian-Americans) are significantly underrepresented at each stage of the pipeline (page 47, 50 and 53). There are similarly substantial variations from one region of the state to another—in both high school graduation and postsecondary education participation with the Northeast and Central Regions of the state being below the state average on both measures (pages 49, 52).
9. Illinois exports a significant number of college students, primarily to public research universities in nearby states (pages 56-57).
10. The students who do enroll in-state overwhelmingly enroll within the region in which they reside. This is particularly true of part-time students but applies to full-time students as well (pages 58-59). In all regions, the clear majority of students who enroll in public institutions enroll in community colleges (page 60). Transfer rates from community colleges to public four-year institutions are relatively low in all parts of the state, but especially low in the Northeast Region where a higher proportion of students begin their postsecondary educations in four-year institutions (pages 72-73).
11. The six-year graduation rates at four-year institutions are higher than the national average and three-year rates at community colleges are below the national average. Enrollment patterns are such that the numbers of degrees produced relative to numbers of high school graduates are well below the national average (pages 74-77). Graduation rates of African-Americans and Hispanics are particularly low and contribute to the low statewide performance (page 78).

12. Illinois relies heavily on in-migration of educated individuals to meet the needs of its economy. Interestingly, students who have achieved associate degrees tend to leave the state, while those with baccalaureate and graduate degrees migrate into the state. When analyzed by age, large numbers of young people come to the state (and Chicago in particular), while older workers leave the state. Net migration is positive among adults age 30-64 only for individuals with less than a high school education (pages 81-82). The state has depended heavily on in-migration of computer specialists; this is one of the few areas where there is an in-migration of older as well as younger workers (page 84-85).
13. While the Illinois economy is stronger than those of many upper Midwestern states, it has some clear weaknesses. Particularly noticeable is the region-to-region variation and the dependence on established companies, rather than emerging companies, for its economic vitality (page 89). Illinois is very much in the middle of the pack with regard to innovation assets (page 90). Illinois universities are in the top 10 states in all major fields with regard to research and development expenditures, with particular strength in math and computer science (page 93). This has not translated into entrepreneurial activity that is driving a revitalized economy (pages 95-98).
14. Although Illinois' population is above the national average in education attainment, the state must improve its position if it is to remain globally competitive (page 101). If the state's institutions maintain business as usual, improvement will require additional resources from either the state or from students (page 103). Relative to the rest of the country, Illinois has a somewhat higher tax capacity and lower tax effort (page 106). However, since Illinois, like all other states, has a long-term structural deficit in its budget, the likelihood of tapping tax capacity specifically for higher education is probably not high (page 107).

Increasing revenues from students is also problematic. After many years of stability, the share of educational costs borne by students has increased markedly (page 108). By all measures, higher education is substantially less affordable than it was in 2001 (pages 109-112).

18.9%	Increase in Annual Associate and Bachelor's Degree Production Needed (in Public Sector Only)

Collective Cost to State, Assuming Tuition Stays the Same

\$ 422 Million	=	Annual Costs of Additional Students at Current \$ per Student
\$ 3.54 Billion	=	Current State Contribution
11.9%	=	Percent Increase in Annual State Support Needed

Average Cost to State, Assuming No Additional State Investment

\$ 1,221	=	Additional Annual Costs to Students at Public Four-Year Institutions
		21.8% Increase in Tuition and Fees (Currently \$ 5,597)
\$ 774	=	Additional Annual Costs to Students at Public Two-Year Institutions
		54% Increase in Tuition and Fees (Currently \$ 1,431)

Savings If Illinois Reaches Top Performance in Degree Production

Performance: Undergraduate Degrees Awarded Per 100 Full-Time Equivalent Students

Reduced costs to Illinois would be **\$1.2 billion** by improving efficiency of degree production to level of top states

Emerging Themes

From the Analyses, a Limited Number of State Needs Become Apparent:

1. Reduce/eliminate disparities between whites and minorities in high school completion, college participation, and college completion.
2. Reduce geographic disparities in college participation.
3. Improve rates of transfer from two-year to four-year institutions.
4. More strongly link the innovation assets of the state to economic development, especially in regions outside the major metropolitan areas.
5. Address issues of affordability.
