CAMP INTERNET'S THREE CORNERSTONES

Teacher Training

Student Learning

Family Involvement

Teacher Training with Direct Classroom Applications

Technology proficiency training is built right into the Camp Internet program every step of the way. Teachers learn-by-doing and implement the skills they gain in their classrooms real time, year-round. Camp training begins in the summer for a 3 day workshop and continues during the school year with new learning units for teachers offered each month online. Camp also offers mid-year technology proficiency in-service workshops with guest experts who focus on innovative classroom technology applications and skill development. The Camp Internet program enables teachers to meet twenty-two of the nationally recommended proficiency skill base goals with clear performance indicators.

Geared for teachers at all levels of technology proficiency, our teachers become Camp Internet Outpost Leaders and share their knowledge with their students and colleagues, increasing the circle of Camp friends every year. Some of our teachers may be using email for the first time. Others are learning to create an Internet Dig for the first time. The more advanced are adding GPS coordinates to student-generated

community maps and processing digital video from local oral history projects. All levels of teachers are invited and will find challenges that they enjoy tackling, and develop skills they can implement in all areas of their teaching.

Student Learning

Camp teachers are using our online program and in-class projects to motivate all levels of learners. At-risk to GATE, students LOVE Camp Internet and are eager to get online, learn, and develop their own projects that bring their online learning

"We selected our 'toughest' period to test the Camp Internet curriculum on. We found that the Camp curriculum engaged them and the behavioral problems this group has a reputation for are almost non-existent... It is like the difference between day and night when comparing their behavior before and after we started Camp Internet."

K. Decroo, Middle School

to life in the classroom and out in their community. Students receive the most value from the Camp program when used 1-2 hours a week for in-class and homework assignments. The varied curriculum themes follow State standards and frameworks, and also serve as an excellent technology elective. Teachers set up a corner in the classroom as their Camp Internet Outpost with posters and learning materials, and of course – computers! Students can participate any time of the day or week, and once a year Community Nights bring the families in to the classroom for multi-generation technology learning.

Family Involvement

All levels and types of students enjoy the learning technology challenges presented by the Camp program. They are challenged to read, think and respond, to study, consider and create, and to link lessons from the past to the issues of the present. GATE programs are using the resources in early morning and afterschool classes; teachers with bi-lingual students appreciate Camp's emphasis on the multi-cultural heritage of the American West as a means to motivate learning; at-risk students are seeing the empowerment technology offers them –and– enjoy related year end field trips that can be a motivating reward for completing their Camp passports. Some schools run the Camp program as their afterschool enrichment activity, others form teacher collaboration across subjects. At the elementary level, the combination of history, reading, science, art, social studies and math provides year round activities for a self-contained classroom. Flexible for 4th-12th grade settings.

"As a teacher of gifted seventh-grade students, I use Camp Internet to meet CA and national content standards. The Camp's "Internet Digs" are especially powerful learning tools because they enable my students to collaborate with peers and experts to investigate curriculum based problems and issues." P. Rynearson, Middle School

CAMP HIGHLIGHTS

For Teachers

SUMMER Teacher Training on Technology Applications for their classrooms

IN-SERVICE Live Teacher Winter Technology Training

ONLINE Teacher Training Skill Building Year Round

CEU options

For Students

NEW WEEKLY online multi-subject features engage student interest and build knowledge in class and afterschool

LIVE online chats with expert Camp Trail Guides from National Parks and partner education agencies

INTERACTIVE Internet Digs – a unique Camp feature that links learners to online resources in a quick-paced learning challenge with online accountability

ONLINE quizzes and challenges promote learning

HANDS-ON learning passports link online resources to classroom learning

EXPERIMENTS - Science, History, Reading and Art project kits

FIELD TRIPS are recommended as year-end live learning experiences

For Families

FAMILIES can join live online Family Nights with expert Trail Guides

CAMP COMMUNITY NIGHTS bring parents, students, teachers, school administrators and the larger community into the classroom to see educational technology in action.

FIELD TRIPS can bring the online studies to life for the whole family !

We DiG the Internet !
