How Do I Make My '93 STOP Eating Rear Tires??

8:50 AM 1-7-2002 Reply

Michigan City IN 93 VW Corrado SLC I'm the original owner of this fine machine. After it starting cupping the OE Conti's at about 15K miles, I took it back to my local, incompetent dealer who allededly put it on the alignment rack and it checked "OK". In dealer warranty talk, that means "There's nothing I

Since then, (I now have 70K miles) I've probably put on 4 sets of tires, not 'cause they're worn out, but 'cause the rears are cupped so bad, I can't stand driving on 'em! I stopped rotating the tires 'cause I'll just end up with 4 bad tires instead of 2.

I recently cruised the Corrado Club web site and they talked about a fix to the rear axle stub where you grind a 10' angle on one and realign the whole car. I was also amused to see on this site that my car has or had virtually EVERY other common problem, sun roof, fog lights, head gasket etc.

Anyhow, I print this Corrado Club stuff and head to my dealer and go "Can you do this and even more importantly can you do this for FREE since it's a documented warranty problem on my car since NEW??" They all start playing DUMB and keep insisting that nothing can fix it. I even FORCED the guy to pull up any factory service bulletins he had and according to him. VW had a fix for this at one time but have since "pulled" this bulletin and have basically stopped "supporting" this car. I smell BS coming out of these guys!!

My first question is, does anybody know of a VW dealer in the NW Indiana/Chicago area who has more that a SLIVER of a brain and can

My second question is, can I get VW to pay for it since it was never fixed under warranty as it should have been??

Have a profitable day!!!

might want to ask evovp ...he works (or worked at a dealership) and he might know more about what you are describing...what year is your C? g60 or slc?

I didn't know that problem applied to the Corrado. I did hear about the Jetta though. Is the only way to find out if you have this problem to wait for your tires to get ruined or can an alignment or visual inspection show the problem?

I rememebr seeing this problem listed in the 1990 TSB for the Jetta and Golfs. The fix was an a differant axle they had. I no longer have

I think I may have this problem on my Jetta as I've had two left rear tires start cupping on the inside edge since I've owned it.

Let us know what you find. 259 posts

auote: I'm the original owner of this fine machine. I now have 70K miles. 2539 posts Tragic Kingdom, CA, USA So I'm going to assume you still have the stock Sachs Red shocks out back, and that your bumpstops are also original. I can tell you that you'd be lucky to have stock shocks last, all these years. My '85 Jetta did the same to the rear tires, and I even replaced the shocks. What wasn't replaces was the bumpstops, but I eventually did with new factory items, and the problem went away. As for the stub axle, I Send IM wouldn't grind them, because you can buy alignment shims for them. Check out this site. http://user.icx.net/~penclnck/align/basic.htm Get some quality struts and shocks with a lifetime warranty, new strut mounts and bumpstops. Also in the rear, some new upper shock bushings and upper spring seat (I personnaly choose polyurethane over the stock rubber). [Modified by Eric D, 6:02 PM 1-7-2002] Fric D A2VR6 4dr Jetta. Manche VWs sind einfach schneller als andere. Race Guy VWvortex Member 6:51 AM 1-8-2002 Re: How Do I Make My '93 STOP Eating Rear Tires?? (Eric D) 3 posts NOPE! It ain't the shocks! Michigan City IN 93 VW Corrado SLC At about 60K miles I installed a Bilstein/Neuspeed lowering suspension that included all the strut bearing/rubber stuff. If anything, the shocks made it WORSE! I think the Bilsteins hold them down so tight that once the cup pattern starts wearing into the tread, it just accelerates the whole process. I doubt if it's the alignment from the lowering job, 'cause the fronts wear perfectly! 🗭 🖺 Send IM What I need is a dealer who can do something beyond OIL CHANGES! Thanks for that site!!! Maybe I can combine that info with a shop that has enough moxie to run the alignment equipment! For KEVIN G, this is WAY beyond the edges of the tires. It's a diagonal pattern (looking at the tread) across the whole patch on both rear tires. If you face the wheel and look across the tread, there's maybe 1/8" deep valleys visible. Have a nice day!!! I actually had mine machined, but shimming will get you the same results. I have the specs lying around somewhere, I'll try to dig them up. My tire couldn't wear any better. They use to cup pretty bad, rotating didn't help much either. Have a good alignment shop do the work, it's basically going to need a four wheel alignment to know where your at. I had my rear brakes done at the same time, if I remember correctly the whole bill was around \$250-\$300 including parts. - Dak 93 SLC Black on Black 205 at the wheels N/A...50/15 that is. 12:06 PM 1-11-2002 Reply

| 8v | apparently so. those #s in the are only valid to the t/b. meaning they are specific replacement parts to coincide with a tech bulletin. i had to do a bit of searching as vw burries their old t/bs but this is the latest version (circa 1996) i had previously thought that one did not exist. but there you have it. | |
