

Kodaikanal Observatory.

BULLETIN No. XXIV.

LIST OF PROMINENCES OBSERVED BETWEEN 1910 JULY 1 AND 1910 DECEMBER 31 WITH A SUMMARY FOR THE YEAR.

This list is a continuation of that published in Bulletin No. XXIII, and contains all the prominences recorded visually and photographically during the second half of 1910. An abstract of the observations giving the mean frequencies and heights, and the distribution in latitude is given on page 389; the mean profile areas and the general summary for the year on pages 390 and 391.

The visual observations were made in the C line of hydrogen and the photographs were obtained in the calcium line K. When prominences are photographed in calcium which are not recorded visually "Ca" is entered in the remarks column. This frequently happens during poor observing weather when the sky is veiled in thin cloud, but no certain differences between the calcium and hydrogen images have been recorded under good conditions of seeing.

Prominences are recorded as "metallic" when bright lines other than those of hydrogen and helium are observed. The lines of sodium, magnesium, and the enhanced lines of iron most commonly appear in these prominences.

The time used is Indian Standard Time ($5\frac{1}{2}$ hours fast of Greenwich Mean Time) and the tabulated latitudes are corrected for the inclination of the sun's axis in the direction of the line of sight.

The visual observers were S. Sitarama Aiyar (S.S.) G. Nagaraja Aiyar (G.N.) and A. Y. Subrahmanya Aiyar (A.Y.S.).

The number of observations made during the six months was as follows:—

| | | | | | | | | | | Days. |
|-------------------------------|----|----|----|----|----|----|----|----|----|-------|
| Complete visual observations | .. | .. | .. | .. | .. | .. | .. | .. | .. | 108 |

REMARKS ON THE DISTRIBUTION OF THE PROMINENCES DURING
THE SECOND HALF OF 1910 AND A GENERAL SUMMARY
FOR THE WHOLE YEAR.

The general features of prominence distribution during the six months ending December 31, 1910, are shown in the accompanying diagram which represents graphically the mean profile areas found for each zone of five degrees in latitude —

MEAN PROFILE AREAS OF PROMINENCES,
JULY 1 TO DECEMBER 31, 1910.

The usual reduction of area as compared with the first half of the year is apparent, a reduction which we attribute mainly to less favourable observing conditions. This however will not explain the relative reduction of the northern hemisphere which shows a diminution of 33 per cent., the south having diminished only 4 per cent.

The distribution differs from that found during the earlier months of the year in the absence of any well-defined zones of activity separated by much less active regions. Also the marked preponderance of the southern hemisphere over the northern is a reversal of previous conditions. The limits of prominence formation towards the poles remains the same at 60° north and south

Reviewing the year as a whole the prominence activity has been well maintained notwithstanding the great reduction in spot activity

In the following tables the mean areas and mean frequencies are compared with the previous year :—

MEAN PROFILE AREAS OF PROMINENCES.

| | | 1909. | 1910. |
|-------|---------|-----------------|-----------------|
| | | Square minutes. | Square minutes. |
| North | | 2·10 | 2·08 |
| South | | 2·04 | 2·07 |
| Total | .. | 4 14 | 4 10 |

MEAN FREQUENCIES OF PROMINENCES.

| | | | | | | | | | | 1909 | 1910. |
|------------|----|----|----|----|----|----|----|----|----|-----------|----------|
| | | | | | | | | | | Per diem. | Per diem |
| North | .. | .. | .. | .. | .. | .. | .. | .. | .. | 10.8 | 11.1 |
| South | .. | .. | .. | .. | .. | .. | .. | .. | .. | 11.0 | 11.0 |
| On equator | .. | .. | .. | .. | .. | .. | .. | .. | .. | 0.1 | 0.2 |
| Total | | | | | | | | | | 21.9 | 22.3 |

It is thus seen that an average of about 22 prominences was recorded per diem in each year and the area covered by them averaged 4.1 square minutes. The diminution of 1 per cent. in the areas and the increase of nearly 2 per cent. in the numbers for 1910 indicates a reduction of about 3 per cent. in the mean size of the prominences. The mean height is the same for the two years, viz., 26" 8.

In forming these tables an approximate allowance is made for partial or imperfect observations and the mean frequencies differ slightly from those given in the abstract for the year on page 389 in which the numbers observed are simply divided by the total number of days of observation.

Metallic prominences were infrequent, only 33 being recorded against 41 in 1909. The reduction is entirely in the northern hemisphere and the proportion between north and south is the same as that found for the spots. The mean and extreme latitudes observed are given in the following table :—

Metallic prominences.

| — | | | | | | | Number observed | Mean latitude | Extreme latitudes. |
|-------|-----|----|----|----|----|----|-----------------|---------------|--------------------|
| North | ... | .. | .. | .. | .. | .. | 10 | 23°.2 | 2°—76° |
| South | ... | .. | .. | .. | .. | .. | 23 | 17°.7 | 2°—88° |

The very high latitudes recorded for a few of the prominences is remarkable as this type of prominence has been found hitherto to be nearly always associated with sunspots. It is perhaps an indication of the advent of a new series of spot disturbances which are known to begin in relatively high latitudes.

Displacements of the hydrogen lines indicating motion in the line of sight were observed in 64 prominences. The displacements were towards the red in 30, towards the blue in 17 and in both directions in 17. The prominences were in latitudes ranging from 3° to 80° but the majority were in low latitudes, many being associated with spot disturbances; only 18 occurred between 45° and 80°.

Seventy-three per cent. of these disturbances occurred in the southern hemisphere.

NOTES.

1910.

- July 1. Lat. + 42° W. A detached arch which quickly faded and had gone by 8^h 53^m. It showed displacement to red in C at lat. + 50° W. At 8^h 12^m in Ca it was an arch connected to the limb at lats. + 45° and + 54° W. with a double streak at the top and 135" in height. At 9^h 4^m the arch had disappeared and there was a jet 55" high in the region.
11. (1) Lat. - 10° 5' E Changing. At 9^h 15^m it consisted mainly of bright filaments. At 9^h 12^m the prominence was not connected to the limb at lats. - 7° and - 9° E. and the height was 150". At 9^h 18^m there were slight displacements in C at several places, to red in some, and to violet in others; but at about half a dozen places, C was displaced 8 Å to red, corresponding to a velocity of 230 miles per second away from the observer. At 9^h 30^m the prominence extended from - 3° to - 14° E. and was 150" high. None of the metallic lines were observed to be bright. At 11^h 40^m the prominence was very small and only 30" high. At 8^h 30^m the next day a bright bank 20" high with jets 45" high were seen in the region. This eruption is apparently associated with spot No. 6869 (Gr.) which came round the east limb on the 13th of the month in this position.
- (2) Lat. - 78° 5' E. Changing. C was slightly displaced to violet over the whole prominence at 8^h 30^m. At 8^h 34^m there were two jets. At 8^h 35^m these were connected to the last prominence. The whole prominence was gradually fading. It was 25" high at 8^h 39^m and 15" high at 9^h 1^m. In Ca it was faint and 30" high.
12. Lat. + 7° W. The prominence consists of a number of faint short streaks extending over 8° of the limb. Changing. Some of the streaks had gone and the prominence was only 20" high at 9^h 20^m. Only two streaks 40" and 30" high were seen in Ca.
- 13 (1) Lat. - 67° 5' E. At 8^h 21^m there was no prominence here, but C was displaced to red about 0.5 Å. By 8^h 22^m a prominence 30" high had formed which was changing rapidly and was 40" high at 8^h 25^m. Nothing was seen in the same position at 9^h 25^m.
- (2) Lat. - 13° W. A cloud extending from lat. - 10° to - 14° W. and connected to the limb by a narrow stem at lat. - 13° W.
21. Lat. - 55° E. Changing in Ca. At 8^h 29^m it was a horseshoe-like prominence 75" high. At 9^h 46^m it was continuous at the base, but the top had narrowed to a fine point and was 80" high. At 9^h 49^m it was 95" high with a narrow streak from about the middle extending northwards.
24. Lat. - 4° 5' W. Changing. C was displaced to red at the base for 1.0 Å. There was no displacement and the prominence was only 10" high at 8^h 58^m. Nothing was seen here in Ca.
- August 8. Lat. + 11° E. 2° broad and 45" high in Ca; Ca streamers pass through the prominence and extend from lat. + 7° to + 17° W.
9. Lat. - 30° E. An extensive Ca cloud 90" high stretches from the top of this and meets the limb at lat. - 15° E.
14. Lat. - 58° E. At 9^h 10^m C was slightly displaced to red throughout the prominence.
16. Lat. - 6° E. At 10^h 20^m it was a faint streak slanting southwards and 45" high. In Ca the prominence extends from - 4° to - 9° and is 35" high.
17. Lat. + 18° E. Changing. At 9^h 24^m it was 50" high and the top was broader than the base. 55" high in Ca.
23. Lat. - 45° 5' W. An arch. Very bright. Changing. The arch had disappeared at 8^h 59^m, and several small jets were appearing at the limb. At 9^h 1^m it was 20" high. Nothing was photographed here at 8^h 22^m in Ca.
31. Lat. - 9° W. F was displaced to red 1.0 Å. At 10^h 16^m the prominence was detached, and there was no displacement to red, but instead a slight displacement to violet.
- September 7. Lat. - 8° W. Very bright. Metallic. D₁, D₂, b₁, b₂, b₃, b₄, 6677 and 4924.1 were bright. C was slightly displaced both ways.
- October 2. (1) Lat. + 54° 5' E. In Ca it consists of two prominences, one at lat. + 56° E. and the other at + 53° 5' E., and 80" and 150" in height.
- (2) Lat. + 1° W. A streak 3° long flows southwards from this. Another similar streak flows northwards in Ca.
- (3) Lat. + 34° 5' W. In Ca the prominence consists of several detached cloudlets extending from lat. + 36° W. to + 40° W. and is 80" high.

- 1910
- October 8. Lat. -9° W. The upper part is detached from the lower. C was slightly displaced to red at the base. The lower portion was visible in $b_1, b_2, b_3,$ and b_4 . A streak from the top slants to -1° W.
13. Lat. -14° E. The southern portion of the prominence was very bright and metallic. $D_1, D_2, b_1, b_2, b_3, b_4, 5316.8,$ and 4924.1 were bright. Changing slightly. Streaks on the northern side were faint.
17. Lat. -7° E. Bright Eruptive. Showed displacement in C to violet 2.0 \AA . The prominence was not metallic. Only a small portion remained visible at $8^{\text{h}} 42^{\text{m}}$. $60''$ high in Ca.
21. (1) Lat. $+7^{\circ}$ E. Ca. The main prominence is about $10''$ high, but it is surmounted by a detached cloudlet $60''$ high.
- (2) Lat. -11° E. Eruptive. Bright. C was displaced to red for 0.5 \AA at the base at the southern part. Changed and only $15''$ high at $10^{\text{h}} 25^{\text{m}}$.
27. Lat. -20° E. A streak from the top flows slightly eastwards. In Ca it goes further and meets the top of the last prominence.
- November 5. (1) Lat. -35.5° W. Ca streaks from the top meet the limb at lat. -46° W. Another $60''$ high flows eastwards to lat. -30° W.
- (2) Lat. $+6.5^{\circ}$ W. Ca. Streaks connected to the limb by four stems at lats. $+3^{\circ}, +5^{\circ}, +8^{\circ}$ and $+10^{\circ}$ W. One of the stems was seen in C. The northern portion of the prominence was detached and $120''$ high at $11^{\text{h}} 21^{\text{m}}$.
14. Lat. $+43^{\circ}$ E. At $9^{\text{h}} 8^{\text{m}}$ there was no prominence here, but there was displacement of C to red for about 0.5 \AA . At $9^{\text{h}} 18^{\text{m}}$ a prominence $15''$ high had formed. Nothing was photographed here in Ca.
19. Lat. -12.5° E. Very bright, eruptive, and metallic. C was displaced to red at the northern stem 0.5 \AA . The prominence was visible in $D_1, D_2, b_1, b_2, b_3,$ and b_4 . Changing. Only $35''$ high at $9^{\text{h}} 7^{\text{m}}$. The following bright lines were observed in addition:— 6677 (He), 5316.790 (Fe), 5017.060 (Fe), 4957.480 (Fe), 4903.502 (Fe), and 4878.407 (Fe).
26. Lats. $+60.5^{\circ}, +52^{\circ},$ and $+46^{\circ}$ E. These are connected in Ca by extensive streaks extending from $+63^{\circ}$ to $+34^{\circ}$ E; and the whole prominence in the photograph attains a height of $100''$ with stems at $+63^{\circ}, +59^{\circ}, +53^{\circ}, +50^{\circ},$ and $+45^{\circ}$ E.
- December 5. Lat. $+24^{\circ}$ W. Detached and very faint in C. In Ca it is a slanting streak connected to the limb and $135''$ in height.
8. Lat. -2° E. Bright and metallic. $D_1, D_2, b_1, b_2, b_3,$ and b_4 were bright and C was slightly displaced both ways.
9. (1) Lat. -3° E. Bright. Nothing was seen here at $8^{\text{h}} 32^{\text{m}}$. F was displaced both ways about 0.3 \AA . Metallic. The small bright stem was visible in 6677 (He), $D_1, D_2, b_1, b_2, b_3, b_4, 5018.6,$ and 4924.1 . The prominence was $20''$ high at $8^{\text{h}} 42^{\text{m}}$ and at $9^{\text{h}} 10^{\text{m}}$ a small bank $10''$ high was seen.
- (2) Lat. -68° E. Bright. C was displaced to violet about 1.0 \AA throughout the prominence. Changing. Not metallic. $60''$ high at $8^{\text{h}} 21^{\text{m}}$. The top was faint and the stem was bright and $30''$ high at $8^{\text{h}} 22^{\text{m}}$. Nothing was seen here at $9^{\text{h}} 9^{\text{m}}$.
- (3) Lat. -16° W. The height of the main prominence is about $30''$; but it is surmounted by a short detached streak $40''$ high.
10. Lat. $+50^{\circ}$ W. Ca. The prominence was faint at $8^{\text{h}} 34^{\text{m}}$ and brighter at $8^{\text{h}} 21^{\text{m}}$. A small portion only was seen in C, about $25''$ in height.
11. Lat. $+16^{\circ}$ W. $75''$ high in Ca at $8^{\text{h}} 24^{\text{m}}$, but at $8^{\text{h}} 49^{\text{m}}$ it had altered in shape, was fainter, and $100''$ high.
13. Lat. $+46^{\circ}$ W. Faint. Two streaks slanting westwards. In Ca in this position there is a prominence extending from $+42^{\circ}$ to $+50^{\circ}$ W. and $60''$ and $90''$ in height.
18. Lats. -18.5° and -21° E. Changing. The prominence at lat. -21° was $15''$ high at $8^{\text{h}} 42^{\text{m}}$ and $25''$ high at $8^{\text{h}} 43^{\text{m}}$. F was displaced to violet for about 0.5 \AA at $8^{\text{h}} 43^{\text{m}}$. Metallic. $D_1, D_2, b_1, b_2, b_3, b_4, 5018.6,$ and 4924.1 were bright. At $8^{\text{h}} 52^{\text{m}}$ the two prominences were connected and $25''$ high. Nothing was seen here at $9^{\text{h}} 36^{\text{m}}$.
24. Lat. -41.5° W. Two prominences with tops connected and flowing southwards. Slightly changed and continuous at the base at $9^{\text{h}} 12^{\text{m}}$.

KODAIKANAL,
1st May 1911.

J. EVERSLED,
Director, Kodaikanal and Madras Observatories.
