

Domain and Range Lesson

Name: _____

Hour: _____ Date: _____

All functions consist of:

- A set of numbers called **domain**, and a set of numbers called **range**
- A pairing of domain with range such that each number in the domain is paired with exactly one number from the range

Domain and Range is called and referred to a few different names:

- Domain: _____, _____, _____
- Range: _____, _____, _____

Identifying Domain and Range

<table border="1" style="display: inline-table; margin-bottom: 10px;"> <thead> <tr> <th style="padding: 5px;">x</th> <th style="padding: 5px;">y</th> </tr> </thead> <tbody> <tr> <td style="text-align: center; padding: 5px;">-2</td> <td style="text-align: center; padding: 5px;">-4</td> </tr> <tr> <td style="text-align: center; padding: 5px;">1</td> <td style="text-align: center; padding: 5px;">-2</td> </tr> <tr> <td style="text-align: center; padding: 5px;">5</td> <td style="text-align: center; padding: 5px;">6</td> </tr> </tbody> </table> <p>Domain: _____</p> <p>Range: _____</p> <p>Function: Yes or No</p>	x	y	-2	-4	1	-2	5	6	<p>Mapping Diagram:</p> <div style="display: flex; justify-content: space-around; align-items: center;"> <div style="text-align: center;"> <p>Input</p> <div style="border: 1px solid black; width: 60px; height: 80px; margin: 0 auto;"></div> </div> <div style="text-align: center;"> <p>Output</p> <div style="border: 1px solid black; width: 60px; height: 80px; margin: 0 auto;"></div> </div> </div>
x	y								
-2	-4								
1	-2								
5	6								

Remember, another way to think of a function is:

“ _____ ”

Try These: Do the table(s) or mapping diagram(s) represent a function?

<table border="1" style="margin-bottom: 10px;"> <thead> <tr> <th style="padding: 5px;">x</th> <th style="padding: 5px;">y</th> </tr> </thead> <tbody> <tr><td style="text-align: center; padding: 5px;">3</td><td style="text-align: center; padding: 5px;">1</td></tr> <tr><td style="text-align: center; padding: 5px;">6</td><td style="text-align: center; padding: 5px;">2</td></tr> <tr><td style="text-align: center; padding: 5px;">9</td><td style="text-align: center; padding: 5px;">2</td></tr> <tr><td style="text-align: center; padding: 5px;">12</td><td style="text-align: center; padding: 5px;">1</td></tr> </tbody> </table> <p>Function: Yes or No</p>	x	y	3	1	6	2	9	2	12	1	<table border="1" style="margin-bottom: 10px;"> <thead> <tr> <th style="padding: 5px;">x</th> <th style="padding: 5px;">y</th> </tr> </thead> <tbody> <tr><td style="text-align: center; padding: 5px;">0</td><td style="text-align: center; padding: 5px;">0</td></tr> <tr><td style="text-align: center; padding: 5px;">1</td><td style="text-align: center; padding: 5px;">2</td></tr> <tr><td style="text-align: center; padding: 5px;">4</td><td style="text-align: center; padding: 5px;">8</td></tr> <tr><td style="text-align: center; padding: 5px;">6</td><td style="text-align: center; padding: 5px;">12</td></tr> </tbody> </table> <p>Function: Yes or No</p>	x	y	0	0	1	2	4	8	6	12	<table border="1" style="margin-bottom: 10px;"> <thead> <tr> <th style="padding: 5px;">x</th> <th style="padding: 5px;">y</th> </tr> </thead> <tbody> <tr><td style="text-align: center; padding: 5px;">2</td><td style="text-align: center; padding: 5px;">0</td></tr> <tr><td style="text-align: center; padding: 5px;">2</td><td style="text-align: center; padding: 5px;">1</td></tr> <tr><td style="text-align: center; padding: 5px;">4</td><td style="text-align: center; padding: 5px;">2</td></tr> <tr><td style="text-align: center; padding: 5px;">7</td><td style="text-align: center; padding: 5px;">3</td></tr> </tbody> </table> <p>Function: Yes or No</p>	x	y	2	0	2	1	4	2	7	3	<div style="display: flex; justify-content: space-around; align-items: center;"> <div style="text-align: center;"> <p>Input</p> <div style="border: 1px solid black; padding: 5px; width: 60px;"> 0 5 10 </div> </div> <div style="text-align: center;"> <p>Output</p> <div style="border: 1px solid black; padding: 5px; width: 60px;"> 2 3 4 5 </div> </div> </div> <p>Function: Yes or No</p>

Vertical Line Test

When looking at the graph of a possible function, one way to check is to use the vertical line test. If a vertical line drawn anywhere on a graph hits the graph in more than one spot, then the graph is **NOT** a function.

Try these: Which of these graphs below represent a function? _____

Make a Table for the Function

The domain of the function, $y = 2x + 1$ is 0, 1, 2, 4, and 7. Make a table and then identify the range.

x	0	1	2	4	7
y					

Range: _____

Try These:

The domain of the function, $y = x - 2.5$ is 0, 2, 5, 7, and 9. Make a table and then identify the range.

x					
y					

Range: _____

The domain of the function, $y = 3x + 4$ is 0, 3, 4, 6, and 10. Make a table and then identify the range.

x					
y					

Range: _____

Write a Rule for a Function

Look for a pattern in the table below for the output compared to the input and try to determine a rule.

x	0	1	4	6	10
y	3	4	7	9	13

Notice that the output in the table is exactly _____ than the input.

Therefore, a rule for this function can be written as: _____

Try These: Determine the rule for the table.

x	-1	1	4	7	9
y	-4	-2	1	4	6

Rule: _____

x	-1	1	4	7	9
y	-5	5	20	35	45

Rule: _____
