

MEMPHIS LIGHT, GAS AND WATER DIVISION
Application for Utility Services for
Apartment Complexes in the Network Area

Residential Engineering
P.O. Box 430
Memphis, TN 38101-0430
(Deliveries at 5791 Summer Trees Memphis, TN 38134)
(901) 729-8675 / (901) 729-8674 Fax

Date _____

PROJECT NAME _____

Number of Units _____

All correspondence and cost quotations should be directed to:

Name _____ Email _____

Company _____ Telephone: _____ Mobile _____

Office _____

Mailing Address _____ Facsimile _____

City _____ State _____ Zip Code _____

Contact person during design process (if different from above):

Projected date all utilities should be installed and energized. ("NEED DATE"): _____

Reference Case Number: _____

CONTRACTOR'S INFORMATION:

Electrician _____ Telephone # _____

Plumber _____ Telephone # _____

Job Superintendent _____ Telephone # _____

APPROVAL CERTIFICATION:

_____ We certify that on _____ (date) these plans received final approval by the appropriate governing body (Memphis and Shelby County Office of Planning and Development).
Final approved plans are enclosed.

_____ Project qualifies as affordable housing.

| | |
|----------------------|-------|
| For MLGW Use: | |
| Map # | _____ |
| Location Code | _____ |
| Town Code | _____ |

Note: After our plans have received approval from the appropriate engineering office, we will be responsible for supplying MLGW with a stamped copy of the final approved plans.

UTILITY SERVICES REQUESTED:

_____ **ELECTRIC**

_____ **WATER**

METERING OPTIONS (Choose one):

_____ **MASTER WATER METER** - A master meter will be located at the property line which will meter all water usage by the development. The developer/project will be charged a minimum monthly bill determined by the meter size installed. *(NOTE: This charge could be quite sizeable if fire hydrants are required.)*

_____ **COMBINATION MASTER WATER METER & FIRE PROTECTION SERVICE** - A fire protection connection (unmetered) and a master meter will both be located at the property line. The developer/project will incur a monthly charge for each fire hydrant and a minimum monthly bill determined by the meter size installed.

_____ **INDIVIDUAL UNIT WATER METERS** - MLGW will install and maintain the internal distribution system, with individual meters for each unit in the development. The developer/project will incur a monthly charge for each fire hydrant installed on private property.

_____ **GAS**

HELP US UNDERSTAND YOUR SPECIAL REQUIREMENTS:

- Estimated Energy Requirements (See load breakdown, pg.4-5)
- Describe any special utility services which you may need installed, such as additional electric meters, leased outdoor lighting, signs, sewer lift pumps, three-phase loads, irrigation connections, etc.

SITE PREPARATION:

Note: Landscaping must be developed with an understanding of the space requirements of the utilities provided to your development as well as the restrictions on the use of MLGW transmission and distribution easements.

TAMPING OPTION:

_____ We desire MLGW to perform additional tamping on all of the backfilled trenches in the roadways of this project. We understand that there is a substantial additional cost for this work.

Note: Regardless of the option chosen, MLGW does not guarantee the degree of compaction achieved by its construction methods. It remains the developer's responsibility to insure adequate compaction of backfill for road construction.
(See addendum for details relating to site requirements)

STREET CROSSINGS OPTIONS (Choose one):

Sometimes, due to weather and other factors, the pace of development progresses to a point where the developer wants to stabilize the roadways before the utility installation has been released to construction.

_____ We **do not** want street crossings installed before the utility installation has been released to construction.

_____ We will install our own street crossings using MLGW provided materials.
(Your designer will provide you with a drawing showing detail of how the conduit and sleeving must be installed. The crossings must be inspected and approved by an MLGW inspector. Call 320-1595 to schedule inspection.)

_____ We want MLGW to install street crossings and use MLGW provided materials before the utility installation has been released to construction.

Note: Project delays and additional cost will incur, if alternate street crossing option is desired after initial design is complete.

PLAN SUBMITAL REQUIREMENTS:

MLGW requires copies of your approved plat and construction plans before the design can be started. We need:

- Five (5) prints of the plat, one (1) complete set of the construction plans, and a CD containing these documents in AutoCAD 13 format or higher (referenced to **NAD 83**), with the ability to turn layers off. You may also e-mail the electronic documents directly to the residential engineering department via mlgwreseng@mlgw.org. *Providing us with this electronic data may speed up the design of your project's utilities and will reduce potential errors in transferring your documents to our computerized land database.*

ALL PLATS AND PLANS MUST HAVE A GEOGRAPHIC TIE DOWN POINT AND STREET NAMES APPROVED BY MLGW'S ADDRESS ASSIGNMENT DEPARTMENT 729-8620.

Signature of Developer _____

YOU SHOULD MEET WITH US FOR A PRE-DESIGN CONFERENCE BEFORE WE BEGIN WORK ON YOUR PROJECT. CONTACT US AT YOUR EARLIEST CONVENIENCE TO ARRANGE FOR THIS MEETING.

ELECTRIC RESIDENTIAL LOAD

| | | | | | |
|--|--|--|--|--|--|
| Unit Type | | | | | |
| Number of units | | | | | |
| wire size & number | | | | | |
| Lighting per unit (KW) | | | | | |

Addendum

Project Name: _____

Date: _____

SITE DESCRIPTION:

The type of street design your project is using establishes the standard location of all underground utilities. (Street design options are specified in the *Memphis and Shelby County Subdivision Regulations*.) Utility locations associated with each design are shown in our construction standards, which you may want to review. (Standards have been jointly developed with the communication utility companies and designate the location of all underground facilities)

UNDERGROUND UTILITIES EASEMENT:

Subdivisions:

Easements will be required ranging from 5'-19' depending on the road width and ROW. These easements will be required along the front, side and back property lines.

Apartments:

Easements of 5' will be required along the routing of all utilities within the development.

SITE PREPARATION:

TREE TRIMMING:

If we chose to do any tree trimming for our development, we understand that we must completely clear trees and underbrush to ten feet on either side of proposed single-phase pole lines and fifteen feet on either side of proposed three-phase lines. All trimming must be completed and approved by an MLGW inspector before electric construction can begin. We understand that failure to pass this inspection can result in delay of this project. (Any questions on tree trimming should be addressed to the designer assigned to your project.) *(NOTE: Simply bulldozing the pole route is seldom sufficient. You will need the permission of adjacent property owners to trim limbs on their property. Significant delays and costs can result if MLGW must assume this responsibility later in the design/construction timetable. Developers should carefully consider the magnitude of this task before choosing this option!)*

TRANSFORMER, SWITCHGEAR, AND HANDHOLE SITES:

MLGW needs to be provided with level and well-drained sites of sufficient size for its surface facilities (transformers, handholes, and switchgear), including 15 feet of clear space in front of equipment doors. If these sites are located in an embankment or a potential washout area, retaining walls will be required. The developer is responsible for providing these walls after MLGW's equipment installation. Additional grading by the developer or an alternate location for this equipment may be preferable to retaining walls. These problems are best solved by working with MLGW during the design phase, rather than in the field just prior to construction.

Due to the terrain on your site, MLGW's designer may need to set some transformers and handholes back to the extent needed to avoid hillside locations. You will be responsible for the setback maintenance charges in these situations. MLGW strongly recommends that you review proposed transformer locations with the designer to minimize potential problems or misunderstandings.

Tamping:

MLGW's standard installation is to tamp all trenches and excavate between the curbs in 12" lifts. When additional tamping is requested; MLGW will tamp using 6" lifts. MLGW does not guarantee the degree of compaction achieved by its construction methods. It remains the developer's responsibility to insure adequate compaction of backfill for road construction.

Tamping behind the curbs may be performed upon request at an additional cost.
Please contact Residential Engineering.

REDESIGNS:

When your application is received, MLGW will assign a designer(s) who will design the utility systems to and within your project. Their design will be in accordance with the information you have supplied and will be guided by the need for efficiency, reliability, and flexibility to accommodate future growth. The utilities in the vicinity of your project may need to be upgraded to provide for the needs of your development. Any complications, such as road construction or unique qualities of your site, may prolong the design and construction of your project; any assistance you are able to provide in coordinating these aspects will be most helpful. You should maintain contact with the designer(s) assigned to your project and immediately notify him of any changes you make to your plans.

Keeping design changes to a minimum is also extremely important. Changes result in additional charges and a delay of your job. Should you require that MLGW deviate from its standard design or change any portion of a system already designed, you may be assessed a redesign fee per affected lot in addition to the cost of the new design. If facilities have already been installed, you must reimburse MLGW for the cost of any abandoned or relocated facilities resulting from the revision. You will also forfeit any investment allowance associated with any lots deleted from the previous plan.

OTHER REQUIREMENTS:

1. MLGW must be made aware of any plans for future phases of development in the area. Please provide us with a plan for your overall development showing the phasing and layout of the roadway system, along with a conceptual timetable for developing the future phases. MLGW needs this information to plan for adequate and cost-effective service to the entire development.
2. The addressing of all property in Shelby County is the responsibility of MLGW. Since an address includes the street name as well as number, the developer should consult with MLGW during the naming process. Guidelines on street names are contained in city/county ordinances. You should not request any addresses until the final layout and names of the streets have been approved by all agencies. There is a fee assessed for any changes to addresses already assigned.
3. MLGW will not begin construction until the developer has paid for the cost of the construction of the requested utilities, less MLGW's investment allowances, if any, for the project. A connection fee for each service must also be paid before MLGW will install the service and metering apparatus.
4. If, after the installation of MLGW facilities, the grade is changed such that the facilities must be relocated, the developer and/or builder will be responsible for the cost of the relocation.
5. Details of the various aspects of utility service can be found in MLGW's Electric, Gas, and Water Service Policy Manuals, copies of which may be obtained from Engineering Department.
6. Electric and Gas utilities will not be installed until all requirements of the construction release form are met and the form is signed and returned.

AFFORDABLE HOUSING INCENTIVES:

To encourage the building of “affordable” single-family housing for the citizens of our area, MLGW offers certain incentives to subdivisions meeting specific criteria and requesting to participate in this program. Please call us for current details of these programs. See Affordable Housing Policy for Qualification.

I have read and understand the requirements of the Addendum. I agree to abide by the requirements relating to the project listed above.
