## Acknowledgements

This report would not have been possible without the cooperation and assistance of many individuals. Special thanks are due to our sister taxpayer associations who, along with MTA, are members of the National Taxpayers Conference, both for their financial and data editing help. Aaron Twait, MTA Research Associate, did most of the research, calculations, and text updating. Lynn Reed, MTA Executive Director, did the final editing for publication.

We would also like to acknowledge the financial and data assistance provided by the Center for Applied Economics at the University of Kansas School of Business, under the direction of Professor Arthur P. Hall. For further information about the Kansas data or the Center you may contact Dr. Hall at (785) 8645134.

## About the Minnesota Taxpayers Association

The Minnesota Taxpayers Association did most of the research and analysis for this study in cooperation with other members of the NTC (see below). MTA was founded in 1926 for the purpose of disseminating factual information to educate and inform all Minnesotans about Minnesota tax and spending policies. For eighty years, the Association has advocated for the adoption of sound fiscal policies through its research efforts, publications, and meetings.

The Association is a non-profit, non-partisan group supported by membership dues. For information about membership, call (651) 224-7477, or visit our web site at www.mntax.org.

## About the National Taxpayer Conference

The National Taxpayers Conference (NTC) is a private, nonprofit corporation whose members are the full-time chief executive officers of statewide associations devoted to the pursuit of objective and unbiased analysis of public finance issues. Each member association shares a common mission-to provide accurate, unbiased research on state and local taxation and spending policies in their respective states. Some NTC members focus on research; others combine research with active taxpayer advocacy through lobbying at the state and local level. All are available to answer your questions. The following NTC states contributed financially toward this study. If you have a question regarding a particular state's tax calculation, please feel free to contact these directors:

Iowa Taxpayers Association
Stacey Johnson, 515-243-0300

## I. Executive Summary

## Introduction

This is the sixth national property tax comparison study MTA has undertaken. We have dropped the $\$ 70,000$ homestead example from the urban tables for this edition, and have added a table for the fifty largest cities in the U.S. Table 11 on page viii shows a summary of rankings and effective tax rates compared to the U.S. average for all six years that the study has been conducted.

This study assumes that the "true market value" of each of several parcels of property is the same in all 123 locations studied. Because the "assessed value" of property varies from state to state, our tax calculations account for the effects of local assessment practices, as well as statutory tax provisions. Each hypothetical property includes assumptions about personal property and real property. Effective property tax rates (ETRs) - that is, total tax divided by total value - are presented in rank order.

Data for property tax calculations was collected either through various state and local websites, or using a contact-verification approach in which state and local tax experts were asked to provide information.

This study is most useful when used in connection with other information about state and local tax structures. Some states have relatively high property tax levies because their local governments are more "own-source" revenue dependent. Other states have higher income and sales taxes in part to finance a greater share of the cost of local government. Likewise, the property tax on a selected class of property may be relatively high or low due to policies designed to redistribute the property tax burdens across the classes of property through exemptions, differential assessment rates, or other classification schemes.

## Findings

## Homesteads

Urban
Minneapolis' relative homestead rankings were virtually unchanged in 2005 compared to 2004. (See Table 34 on page 21 and Table 40 on page 30 for complete homestead results.)
Table 1: Minneapolis Homestead Property Tax Effective Tax Rates (ETR), Taxes Payable 2004 and 2005

| Real <br> Property <br> Value | Taxes Payable 2004 |  |  |  | Taxes Payable 2005 |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | $\begin{aligned} & \text { Total } \\ & \text { Tax } \end{aligned}$ | ETR | Urban |  | Total Tax | ETR | Urban |  |
|  |  |  | $\begin{gathered} \text { \% } \\ \text { U.S. } \end{gathered}$ | Rank |  |  | $\begin{gathered} \text { \% } \\ \text { U.S. } \end{gathered}$ | Rank |
| \$150,000 | \$1,867 | 1.245\% | 87.7 | 28 | \$1,790 | 1.193\% | 87.4 | 29 |
| \$300,000 | \$4,106 | 1.369\% | 92.4 | 29 | \$3,952 | 1.317\% | 92.2 | 28 |
| Median* | \$2,882 | 1.322\% | 103.7 | 27 | \$3,054 | 1.285\% | 105.3 | 25 |

* Median price for the Minneapolis-Saint Paul metropolitan area in 2004 was $\$ 218,000$ and was $\$ 237,700$ for 2005. Rank is for ETR only.

By all measures, property taxes on homes in Minneapolis are modest compared to other large cities in the U.S, typically at or below the U.S. average of other large cities.

Rural
Minnesota's rural homestead rankings showed only slight changes in 2005 compared to 2004. Complete results can be found on Table 46 on page 39. No median home values were available for our rural examples.

Table 2: Glencoe Homestead Property Tax Effective Tax Rates (ETR), Taxes Payable 2004 and 2005

| Value of <br> Real <br> Property | Taxes Payable 2004 |  |  |  | Taxes Payable 2005 |  |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Total <br> Tax | ETR | \% <br> U.S. | Rank | Total <br> Tax | ETR | \% <br> U.S. | Rank |
| $\$ 70,000$ | $\$ 654$ | $0.934 \%$ | 76.9 | 32 | $\$ 666$ | $0.951 \%$ | 76.4 | 35 |
| $\$ 150,000$ | $\$ 1,638$ | $1.092 \%$ | 83.8 | 28 | $\$ 1,714$ | $1.143 \%$ | 85.5 | 29 |
| $\$ 300,000$ | $\$ 3,649$ | $1.216 \%$ | 89.9 | 28 | $\$ 3,800$ | $1.267 \%$ | 91.5 | 27 |

Both urban and rural homestead examples show that significant property tax reform in 2001 discussed under commercial property below has been achieved without significant property tax increases on homes when values are held constant.

## Commercial Property

Urban
Minneapolis' urban commercial property tax rankings remained stable between 2004 and 2005, as Table 3 indicates. Table 36 and Table 42 have full results on pages 23 and 32 .

This represents significant competitive improvement since 1995, when Minnesota's rank was number one for the higher valued parcels. Property tax reform begun in the late 1990s with additional significant class rate compression and school levy takeover implemented in 2001 are responsible for the improvements in rank through 2002 (see Table 9 on page iv for a summary of class rate changes). A combination of property tax restraint and the falling rate of the statewide property tax on business property most likely contributed to the continued improvement through 2004. The slight upturn for 2005 shown in this report is most likely due to the effects of limited market value, discussed further below.
Table 3: Minneapolis Commercial Property Tax Effective Tax Rates (ETR), Taxes Payable 2004 and 2005

| Real <br> Property <br> Value | Taxes Payable 2004 |  |  |  | Taxes Payable 2005 |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | $\begin{aligned} & \text { Total } \\ & \text { Tax } \end{aligned}$ | ETR | Urban |  | Total Tax | ETR | Urban |  |
|  |  |  | $\begin{gathered} \text { \% } \\ \text { U.S. } \end{gathered}$ | Rank |  |  | $\begin{gathered} \text { \% } \\ \text { U.S. } \end{gathered}$ | Rank |
| \$100,000 | \$2,534 | 2.112\% | 104.9 | 23 | \$2,578 | 2.149\% | 106.2 | 21 |
| \$1,000,000 | \$32,229 | 2.686\% | 131.2 | 14 | \$32,736 | 2.728\% | 132.7 | 14 |
| \$25,000,000 | \$834,899 | 2.783\% | 135.2 | 11 | \$847,834 | 2.826\% | 136.9 | 13 |

Minneapolis' ratio of commercial ETRs to homestead ETRs turned slightly upward after falling from 1998 through 2004. For payable 2004, the ratio was 2.438 when the statewide tax on business property was included and 1.799 with only the local portion of the property tax considered. For payable 2005, that rose to 2.548 including the statewide tax and 1.875 for the local portion. The ranking of that ratio for Minneapolis compared to the largest city in each state remained at $8^{\text {th }}$ highest in 2005 with the statewide tax included, and $18^{\text {th }}$ highest for only the local portion (see Table 17 on page 6 ).

The rise in the ratio for 2005 is likely due to the effects of limited market value on residential property. By limiting the amount of valuation increases that are subject to property tax on residential property, taxes are shifted either to properties with lower valuation increases within the residential classes or to non-residential classes of property not eligible for limited value. Tax rates must be higher due to increased value that is limited from being included in the taxable base.

Rural
There is an upward ranking trend for the $\$ 100,000$ Glencoe commercial properties, as it rose three spots to $14^{\text {th }}$. Rural commercial property taxes remained stubbornly high at the other values. The ranking for the $\$ 25$ million property dropped one spot from $5^{\text {th }}$ to $6^{\text {th }}$, and the $\$ 1$ million parcel remained at the $7^{\text {th }}$ highest rank. Total taxes payable rose between $5.5 \%$ to $5.8 \%$, and all parcels under consideration moved further above the U.S. average.

Table 4: Glencoe Commercial Property Tax Effective Tax Rates (ETR), Taxes Payable 2004 and 2005

| Value of <br> Real <br> Property | Taxes Payable 2004 |  |  |  | Taxes Payable 2005 |  |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Total <br> Tax | ETR | \% <br> U.S. | Rank | Total <br> Tax | ETR | \% <br> U.S. | Rank |
| $\$ 100,000$ | $\$ 2,276$ | $1.897 \%$ | 117.0 | 17 | $\$ 2,403$ | $2.003 \%$ | 120.9 | 14 |
| $\$ 1,000,000$ | $\$ 28,801$ | $2.400 \%$ | 146.0 | 7 | $\$ 30,470$ | $2.539 \%$ | 152.0 | 7 |
| $\$ 25,000,000$ | $\$ 745,585$ | $2.485 \%$ | 150.8 | 5 | $\$ 789,014$ | $2.630 \%$ | 157.2 | 6 |

## Industrial Property

Urban
Minneapolis' industrial property tax rankings, total taxes paid and burden relative to the national average all dropped considerably since 2004. This is due primarily to the impact of the sales ratios for these two years. Few industrial sales results in less stable ratios from year to year, and the particular mix of a small number of sales for 2004 resulted in a high sales ratio for that year. Table 5 summarizes our Minnesota findings, while our national findings are presented after the body of the report in Table 37, Table 38 (urban cities), Table 43 and Table 44 (largest fifty cities).

Table 5: Minneapolis Industrial Property Tax Effective Tax Rates (ETR), Taxes Payable 2004 and 2005

| Real Property Value | Taxes Payable 2004 |  |  |  | Taxes Payable 2005 |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Total Tax | ETR | Urban |  | Total Tax | ETR | Urban |  |
|  |  |  | $\begin{gathered} \text { \% } \\ \text { U.S. } \end{gathered}$ | Rank |  |  | $\begin{gathered} \text { \% } \\ \text { U.S. } \end{gathered}$ | Rank |
| 50\% Pers. Prop |  |  |  |  |  |  |  |  |
| \$100,000 | \$3,112 | 1.556\% | 97.9 | 25 | \$2,578 | 2.149\% | 83.8 | 33 |
| \$1,000,000 | \$39,581 | 1.979\% | 121.0 | 18 | \$32,736 | 2.728\% | 103.2 | 23 |
| \$25,000,000 | \$1,025,351 | 2.051\% | 124.7 | 13 | \$847,834 | 2.826\% | 106.6 | 21 |
| 60\% Pers. Prop |  |  |  |  |  |  |  |  |
| \$100,000 | \$3,112 | 1.556\% | 83.6 | 35 | \$2,578 | 2.149\% | 72.1 | 38 |
| \$1,000,000 | \$39,581 | 1.979\% | 103.7 | 26 | \$32,736 | 2.728\% | 89.3 | 30 |
| \$25,000,000 | \$1,025,351 | 2.051\% | 107.0 | 24 | \$847,834 | 2.826\% | 92.1 | 28 |

Minnesota's full exemption of personal property (machinery, equipment, inventories, and fixtures) for most industrial firms (except utilities) results in lower Minnesota industrial property tax rankings than the commercial rankings, even though the total taxes payable for industrial parcels are similar to commercial parcels of the same real estate value (with the only differences due to different sales ratios).

## Rural

Minnesota's rural industrial property taxes ranked roughly ten spots higher than taxes for comparable industrial properties in Minneapolis, and are the only examples in our 2005 study to show a consistent increase in rank across all values. This is also mainly a function of changes in the sales ratio. See comments under urban industrial above.

Table 6: Glencoe Industrial Property Tax Effective Tax Rates (ETR), Taxes Payable 2004 and 2005

| Value of <br> Real Property | Taxes Payable 2004 <br> Tax |  |  |  | ETR | \% <br> U.S. | Rank | Total <br> Tax |

## I. Executive Summary

## Apartments

Urban
Results for 2005 continue to show the decreases that have been documented since the pre-2001 property tax reform ranking of $7^{\text {th }}$ in our 2000 study, consistent with attempts to reduce property taxes on apartments. (In the course of preparing the 2005 study, we discovered that our 2004 results for Minnesota were in error. The two tables below reflect corrected results for apartments for 2004.)

Table 7: Minneapolis Apartment Property Tax Effective Tax Rates (ETR), Taxes Payable 2004 and 2005

| Real <br> Property <br> Value | Taxes Payable 2004 |  |  |  | Taxes Payable 2005 |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Total Tax | ETR | Urban |  | Total Tax | ETR | Urban |  |
|  |  |  | $\begin{gathered} \text { \% } \\ \text { U.S. } \end{gathered}$ | Rank |  |  | \% U.S. | Rank |
| \$600,000 | \$10,453 | 1.659\% | 92.3 | 26 | \$9,950 | 1.579\% | 86.7 | 28 |

## Rural

Minnesota's ranking for rural apartment taxes stabilized, after dropping from $1^{\text {st }}$ in 2000 (where it had been since 1995) to $13^{\text {th }}$ in 2002 to $29^{\text {th }}$ in 2004. For 2005 the ranking remained unchanged at 29.

Table 8: Glencoe Apartment Property Tax Effective Tax Rates (ETR), Taxes Payable 2004 and 2005

| Value of <br> Real Property | Taxes Payable 2004 |  |  |  | Taxes Payable 2005 |  |  |  |
| ---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Total <br> Tax | ETR | \% <br> U.S. | Rank | Total <br> Tax | ETR | \% <br> U.S. | Rank |
| $\$ 600,000$ | $\$ 8,150$ | $1.293 \%$ | 83.4 | 29 | $\$ 8,273$ | $1.313 \%$ | 84.8 | 29 |

## Conclusion

This study updates our payable 2004 50-State Property Tax Comparison Study in order to continue to measure the long-term effects of the major property tax reform of the 2001 legislative session, and to satisfy the data needs of a growing number of public policy researchers. Our findings show that this major reform has continued to reduce the tax disparities among classes of property in Minnesota at the local level, when assessment differences are not taken into account. Even the statewide tax on business property has had the result of slightly reducing class disparities versus 2001.

During Minnesota's 1997, 1998, 1999, and 2001 legislative sessions, classification rates were reduced for nearly all classes except the first $\$ 75,000$ of homestead value (the tier amount was raised to $\$ 76,000$ during the 1999 session for taxes payable in 2000 and again during the 2001 session to $\$ 500,000$ for taxes payable in 2002). Future phased-in rate reductions for apartments were part of the 2001 reform. Table 9 below shows class rates for the period 1995-2005 for the classes of property used in this study.

Table 9: Minnesota's Property Classifications and Class Rates, 1995-2005

|  |  |  | 2000 |  |  | 2004 |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Payable Year $\rightarrow$ | 1995-97 | 1998 | 1999 | \& 2001 | 2002 | 2003 | \&2005 |
| Class 1 (a): Residential Homesteads |  |  |  |  |  |  |  |
| Tier 1 ( $<\$ 72,000$ Market 1995-97, $<\$ 75 \mathrm{~K}$ for1998- |  |  |  |  |  |  |  |
| $99,<\$ 76 \mathrm{~K}$ for 2000-01, $<\$ 500 \mathrm{~K}$ for 2002-05) Tier 2 ( $\$ 72,000+$ Market 1995-97, $\$ 75 \mathrm{~K}$ for 1998- | 1.00\% | 1.00\% | 1.00\% | 1.00\% | 1.00\% | 1.00\% | 1.00\% |
| $99, \$ 76 \mathrm{~K}$ for 2000-01, $\$ 500 \mathrm{~K}$ for 2002-05) | 2.00\% | 1.85\% | 1.70\% | 1.65\% | 1.25\% | 1.25\% | 1.25\% |
| Class 3 (a): Commercial/Industrial |  |  |  |  |  |  |  |
| First \$100,000 market (\$150,000 for 1998-2005) | 3.00\% | 2.70\% | 2.45\% | 2.40\% | 1.50\% | 1.50\% | 1.50\% |
| Over \$100,000 market (> \$150,000 for 1998-2005) | 4.60\% | 4.00\% | 3.50\% | 3.40\% | 2.00\% | 2.00\% | 2.00\% |
| Class 4 (a): Apartments (>=4 units) | 3.40\% | 2.90\% | 2.50\% | 2.40\% | 1.80\% | 1.50\% | 1.25\% |

These classification rate changes, accompanied by the replacement of the state general education levy with state aid as part of the 2001 reform, has resulted in an improved relative property tax ranking for Minnesota business and apartment property without detrimental effects on homeowners' taxes. The primary exception is rural business property taxes, which remain stubbornly high.

For a look at how Minnesota compares with its neighboring states in payable 2005, see Table 10 on page vii.

Regarding the transition years of 2002 and 2003, the first year of the reform's effects, shown in our study for taxes payable in 2002, was probably not the best test of the reforms. This is because the lynchpin of the 2001 reforms was to remove the general education levy from local property taxes and replace it with general fund revenue. Property taxes statewide fell by about $9 \%$ for 2002, compared to 2001, because of the reforms enacted, even after many local governments raised their levies significantly to take advantage of the "room" created by the repeal of the general education levy. Aggregate property tax levies for 2003 returned to just below the level for 2001. It is only for taxes payable in 2004 and beyond that the reform can be appropriately evaluated, since no major property tax changes have been made since 2001.

Progress has been made toward compressing Minnesota's class rates and we commend the legislators and governors involved for moving our property tax system toward accountability. The ratio between the $\$ 1$ million commercial ETR to the median residential ETR was 3.383 for taxes payable in 1998, which was the $4^{\text {th }}$ highest such ratio in the country. Through political leadership of elected officials, that ratio has been reduced to 2.548 for taxes payable in 2005, with a rank of $8^{\text {th }}$ highest. When only local property taxes are included in the ratio, it drops to 1.875 and $18^{\text {th }}$ highest in the country.

Figure 1: Various Ratios of Urban Commercial-to-Median Homestead ETRs, 1998-2005

Note: The ratios shown are calculated as the effective tax rate (ETR) of a $\$ 1$ million commercial property to the ETR of the median value home, averaged for each of the largest cities in each state that was included in the studies for all five years.

In spite of this progress, however, rural commercial property taxes remain stubbornly high compared to the rest of the country, and it is rural Minnesota that is most in need of a tax environment conducive to business development and expansion. Also, there is continued pressure

## I. Executive Summary

to increase the statewide property tax primarily on business property to provide more revenues for state government. Furthermore, the ratio of commercial to residential ETRs in Minnesota is still $11 \%$ higher than the average for all places in this study if sales ratio data is included, and $16 \%$ higher without sales ratio data. This measure crept up for 2005, however, probably due primarily to limited market value for residential property.

Further reductions in the disparity between business and residential property would have a twofold benefit for Minnesota. First, it would continue to align the cost of local public services more closely with the majority of voters, that is, homeowners. This means that more of the tax burden would be in plain view of homeowners instead of being hidden from them in the form of increased business taxes, which are ultimately passed on to homeowners primarily through higher prices and lower wages. Second, business property taxes would be lowered, resulting in a more competitive business environment in the state. Because of these benefits from reduced disparities among classes of property, vigilance is required to preserve the gains in accountability that have been made over the last several years at significant cost to the state's general fund, and to continue to work toward further reduction.

*The first three studies were authored by the Minnesota Taxpayers Association (MTA), and the 2002 and 2004 studies were conducted under the auspices of the Minnesota Center for Public Finance Research, which is the research and educational arm of the MTA. This study is again being conducted by MTA.

## II. Introduction

This study reports on relative property tax burdens across the United States. Effective property tax rates are compared for four classes of property located in the largest city of each state and the District of Columbia, plus a typical rural area. As tax rates have fluctuated since our first study in 1995, many of our rural cities have been changed, in order to keep our examples typical. Where a comprehensive statewide list of property tax rates is available, we have chosen the rural area ourselves. In cases where such a list is not available, we let states pick the rural area to be included, asking only that the taxes for that area be near the average for a rural area in the state.

This study is most useful when used in connection with other information about state and local tax structures. Some states have relatively high property tax levies because their local governments are more dependent on "own-source" revenue (revenue they raise themselves). Other states have higher income and sales taxes in part to finance a greater share of the cost of local government. Also, the property tax on a selected class of property may be relatively high or low due to state or local policies designed to redistribute property tax burdens across the classes of property through exemptions, differential assessment rates, or other classification schemes.

As in the five previous studies (1995, 1998, 2000, 2002 and 2004), the values used for our examples remain fixed, to facilitate comparisons with those studies. We recognize that in many urban areas, our lowest-valued properties are not typical values. We deliberately used fixed values in this study because our goal was to compare the tax burden resulting from each state's tax structure, unaffected by local real estate markets. However, to provide a more complete picture, rankings for median-value homes were added to this study in Table 35 on page 22 and in Table 41 on page 31.

Data for property tax calculations were collected in one of two ways. Where possible, property tax data was collected directly from information available through various state and local websites. Where such reports were not available, property taxes were calculated using a contactverification approach in which state and local tax experts were asked to provide information. Those calculations were, in turn, subject to local verification when necessary.

The primary difference between this study and the preceding five is the addition of new tables comparing the largest fifty cities in the United States. Rankings for these cities have been requested before, and their inclusion means a significantly larger portion of the U.S. population is covered by this study, increasing its usefulness. Beginning with our 2004 study, additional assumptions were included regarding the amount of personal property that industrial parcels contain. Previous studies have assumed that industrial parcels contain $50 \%$ personal property and $50 \%$ real property. Based on research of actual property taxes paid in various states, we have included a second scenario in this study of an industrial parcel that is comprised of $40 \%$ real property value and $60 \%$ personal property value. We believe that these two scenarios provide a reasonable range within which most industrial properties fall.

Some of the cities surveyed changed from the 2004 study to the present 2005 study. In the case of the urban cities, these changes occurred primarily because the largest city was not deemed representative of urban areas in the state. In those cases, the state's second-largest city was added to the study. In the case of the rural cities, changes were made either because the city surveyed in 2004 was no longer typical of the rural cities in their respective states, either in size or tax rate,

## II. Introduction

Changes made in city selection for this 2005 study include:

- Second urban areas added in New York and Illinois, specifically Buffalo, NY and Aurora, IL (replacing Naperville, IL)
- Miami-Dade, FL no longer qualifies for consideration in our urban tables as the largest city in the state but has been included in the comparison of fifty largest U.S. cities
- Lexington-Fayette, KY and Richmond, VA no longer meet any of our criteria and have been removed from the study

Rural cities that changed include (with the year of their inclusion in parentheses):

- Fort Deposit, AL (2004), to Millbrook, AL (2005)
- Grinnell, IA (2004), to Hampton, IA (2005)
- Choteau, MT (2004), to Dillon, MT (2005)
- Chapin, SC (2004), to Mullins, SC (2005)
- Spink, SD (2004), to Sisseton, SD (2005)
- South Burlington, VT (2004), to Morristown, VT (2005)
- Antigo, WI (2004), to Mayville, WI (2005).

This study assumes that the "true market value" of each of several parcels of property is the same in all 123 locations studied. Because the "assessed value" of property varies from state to state, sometimes significantly, our tax calculations necessarily account for the effects of local assessment practices as well as statutory tax provisions. Appendix A of this report provides a review of the methodology used in determining the property tax liabilities of the four sample property types and the important assumptions necessary to standardize the calculations and make the numbers comparable across the states.

Section III reviews the property tax rankings for the 53 largest cities in each state. Also included in this section is analysis of the highest and lowest property tax states, Minnesota's neighboring states, and several key features such as classification systems, disparities between homestead and non-homestead properties (particularly business property), and personal property assumptions.

Section IV contains some concluding comments, and Sections V, VI and VII contain the complete set of comparison tables referenced in this report.

## III. Findings

## Residential Homestead Property Tax Rankings

## Urban

Table 34 on page 21 shows the payable 2005 property tax on two residential homesteads for the largest city in each state, and Table 40 on page 30 shows the same tax for the largest fifty U.S. cities. Compared to other urban cities (see Table 12), Minneapolis' homestead rankings remained virtually unchanged from 2004 to 2005 , with the $\$ 150,000$ home moving down one spot to $29^{\text {th }}$ and the $\$ 300,000$ moving up one to $28^{\text {th }}$. This represents a significant increase in ranking since 2002, when Minnesota came in $41^{\text {st }}$, but the 2002 rankings were historically low, resulting from the property tax reform of 2001 that reduced homeowners' property taxes by about $17 \%$ statewide. Property taxes on homes rebounded to about their 2001 level by 2003, and have grown modestly since then. Although Minneapolis' rankings have remained stable, both the effective tax rate (ETR) and the tax burden relative to the U.S. average declined from 2004 to 2005 when values were held constant.

Because home values vary significantly from one part of the country to another, we also calculated and ranked property taxes on median home values for the metropolitan areas encompassing the largest city in each state. This analysis, found on Table 35, page 22, indicates that compared with urban areas in every state, Minneapolis rankeds $15^{\text {th }}$ in total tax (up from $18^{\text {th }}$ in 2004), at $\$ 3,054$; and $25^{\text {th }}$ in ETR (up two spots from $27^{\text {th }}$ ) at $1.285 \%$, with a median home value of $\$ 237,700$. Compared with the largest fifty U.S. cities, (Table 41, page 31) Minneapolis ranked $24^{\text {th }}$ in total tax and $22^{\text {nd }}$ in ETR.

Note that we have eliminated that $\$ 70,000$ example for urban areas as unrepresentative, since the average home price in the United States has now surpassed $\$ 200,000$.
Table 12: Minneapolis Homestead Property Tax Effective Tax Rates (ETR), Taxes Payable 2004 and 2005

| Real <br> Property <br> Value | Taxes Payable 2004 |  |  |  | Taxes Payable 2005 |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Total Tax | ETR | Urban |  | Total Tax | ETR | Urban |  |
|  |  |  | $\begin{gathered} \hline \% \\ \text { U.S. } \end{gathered}$ | Rank |  |  | $\begin{gathered} \text { \% } \\ \text { U.S. } \end{gathered}$ | Rank |
| \$150,000 | \$1,867 | 1.245\% | 87.7 | 28 | \$1,790 | 1.193\% | 87.4 | 29 |
| \$300,000 | \$4,106 | 1.369\% | 92.4 | 29 | \$3,952 | 1.317\% | 92.2 | 28 |
| Median* | \$2,882 | 1.322\% | 103.7 | 27 | \$3,054 | 1.285\% | 105.3 | 25 |

* Median price for the Minneapolis-Saint Paul metropolitan area in 2002 was $\$ 189,400$, was $\$ 218,000$ in 2004 and was $\$ 237,700$ for 2005. Rank is for ETR only.

Though the class rate for all three homes in Minneapolis is $1 \%$ of value, the ETRs are higher for higher valued homes because the market value credit Minnesota provides is designed to phase out for values beginning at $\$ 76,000$ to about $\$ 414,000$.

Compared to the other 49 largest cities in the country, the tax burden on Minneapolis homesteads is still low, remarkably so considering that eight of the largest fifty cities are in California, with its strict Proposition 13 legislation that limits both home values and tax rates. Since the 2005 study is the first for which we have calculated rankings for the fifty largest cities in the nation, no trend analysis can be conducted.

When comparing a $\$ 500,000$ valued home in Minneapolis with $\$ 500,000$ homes in the 52 other largest cities in each state (see Table 13 below), Minneapolis' rank rose slightly to $29^{\text {th }}$, with a total tax of $\$ 6,799$, which was $6.6 \%$ below the average for cities in the study. The effective tax rate was $1.360 \%$. Minneapolis' ranking climbed to $25^{\text {th }}$ for the $\$ 750,000$ home and to $24^{\text {th }}$ for the $\$ 1$ million home. All of these are decreases from the 2004 rankings, which were $30^{\text {th }}, 24^{\text {th }}$ and

## III. Findings

$23^{\text {rd }}$, respectively. The reason for the higher rankings for the two highest-valued homes is Minnesota's two-tiered classification system for homestead properties: all value up to $\$ 500,000$ is taxed at $1.0 \%$ of appraised value, while all value over $\$ 500,000$ is taxed at $1.25 \%$ of appraised value. An additional factor is the phase-out of Minnesota's market value credit.

Table 13: How Minneapolis Homestead Property Taxes Rise with Value, Payable 2005

| Real Value | Total Tax | ETR | Urban <br> Rank |
| :---: | :---: | :---: | :---: |
| $\$ 150,000$ | $\$ 1,790$ | $1.193 \%$ | 29 |
| $\$ 300,000$ | $\$ 3,952$ | $1.317 \%$ | 28 |
| $\$ 500,000$ | $\$ 6,799$ | $1.360 \%$ | 29 |
| $\$ 750,000$ | $\$ 10,968$ | $1.462 \%$ | 25 |
| $\$ 1,000,000$ | $\$ 15,137$ | $1.514 \%$ | 24 |

## Rural

Table 46 on page 39 shows the payable 2005 property tax on three residential homesteads for a typical rural city in each state. Though not a typical value for a home in Glencoe, we still calculated a $\$ 300,000$ example. Table 14 below provides a snapshot of Minnesota's rural homestead property tax statistics. Compared to other rural municipalities, Minnesota's rankings showed only slight change for 2005 . While the rankings reveal a slight downward trend, total tax paid and the ETR rose in each example, and the $\$ 150,000$ and $\$ 300,000$ homes both moved closer to the U.S. rural median tax paid. The rankings remained virtually unchanged since 2002.
Table 14: Glencoe Homestead Property Tax Effective Tax Rates (ETR), Taxes Payable 2004 and 2005

| Value of Real Property | Taxes Payable 2004 |  |  |  | Taxes Payable 2005 |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Total Tax | ETR | $\begin{gathered} \text { \% } \\ \text { U.S. } \end{gathered}$ | Rank | Total Tax | ETR | $\begin{gathered} \text { \% } \\ \text { U.S. } \end{gathered}$ | Rank |
| \$70,000 | \$654 | 0.934\% | 76.9 | 32 | \$666 | 0.951\% | 75.6 | 35 |
| \$150,000 | \$1,638 | 1.092\% | 83.8 | 28 | \$1,714 | 1.143\% | 85.7 | 29 |
| \$300,000 | \$3,649 | 1.216\% | 89.9 | 28 | \$3,800 | 1.267\% | 91.7 | 27 |

No median home values were available for rural cities.

## The Highest and Lowest Homestead Tax States - Urban and Top 50

## Highest

The states whose largest cities had the highest property tax for all homestead values were as follows:

Table 15: Urban Cities with Homestead Tax Rankings among the Top Ten for Both Values

| State | City | $\$ \mathbf{1 5 0 , 0 0 0}$ |  | $\$ \mathbf{\$ 3 0 0 , 0 0 0}$ |  |
| :--- | :--- | :--- | :---: | :---: | :---: | :---: |
|  |  | Rank | Tax | Rank |  |
| Michigan | Detroit | $\$ 4,850$ | 1 | $\$ 9,701$ | 1 |
| New York | Buffalo | $\$ 3,936$ | 2 | $\$ 8,067$ | 2 |
| Wisconsin | Milwaukee | $\$ 3,669$ | 3 | $\$ 7,431$ | 3 |
| Texas | Houston | $\$ 3,512$ | 4 | $\$ 7,217$ | 5 |
| Illinois | Aurora | $\$ 3,469$ | 5 | $\$ 7,294$ | 4 |
| Maryland | Baltimore City | $\$ 3,440$ | 6 | $\$ 6,881$ | 6 |
| Pennsylvania | Philadelphia | $\$ 3,350$ | 7 | $\$ 6,701$ | 7 |
| Nebraska | Omaha | $\$ 3,094$ | 8 | $\$ 6,187$ | 9 |
| North Dakota | Fargo | $\$ 2,983$ | 9 | $\$ 5,966$ | 10 |
| New Jersey | Newark | $\$ 2,957$ | 10 | $\$ 6,514$ | 8 |

## Lowest

The states whose largest cities had the lowest homestead taxes for all values of homes were:
Table 16: Urban Cities with Homestead Tax Rankings among the Bottom Ten for Both Values

| State | City | \$150,000 |  | \$300,000 |  |
| :--- | :--- | :---: | :---: | :---: | :---: | :---: |
|  |  | Rank | Tax | Rank |  |
| Massachusetts | Boston | $\$ 242$ | 53 | $\$ 1,706$ | 51 |
| Hawaii | Honolulu | $\$ 434$ | 52 | $\$ 1,018$ | 53 |
| New York | New York City | $\$ 691$ | 51 | $\$ 1,782$ | 50 |
| Colorado | Denver | $\$ 769$ | 50 | $\$ 1,538$ | 52 |
| Wyoming | Cheyenne | $\$ 981$ | 49 | $\$ 1,963$ | 49 |
| Alabama | Birmingham | $\$ 982$ | 48 | $\$ 2,016$ | 48 |
| District of Columbia | Washington | $\$ 1,003$ | 47 | $\$ 2,371$ | 47 |
| Utah | Salt Lake City | $\$ 1,197$ | 46 | $\$ 2,394$ | 46 |
| West Virginia | Charleston | $\$ 1,233$ | 45 | $\$ 2,466$ | 45 |
| Virginia | Virginia Beach | $\$ 1,265$ | 44 | $\$ 2,531$ | 44 |

Most of these states ranked near the bottom simply due to low property tax rates. Some cities ranked low because they also offer sizable homestead exemptions. Washington, D.C. offers a homestead exemption of $\$ 38,000$ of assessed value; Honolulu offers a homestead exemption of $\$ 40,000$ of assessed value; and Boston, MA, offers a $\$ 113,972$ exemption for the $\$ 150,000$ home ( $4.2 \%$ higher than the 2004 exemption). In the case of New York City, a $\$ 400$ property tax rebate was combined with a low sales ratio to keep it in the Bottom Ten.

## A Summary of Classification Effects - Urban and Top 50

Table 17 provides one summary measure of the degree of property classification from state to state (the degree to which business property is taxed differently from homestead property). It shows the ratio of commercial effective tax rates to homestead effective tax rates using the $\$ 1$ million commercial property and the median-value home price for each metropolitan area. This is a change from previous studies, which used the ETRs for homes valued at $\$ 70,000$. Using such a low value amplified the effects of homestead exemptions. The median home price provides a more useful denominator for this ratio.

## III. Findings

Table 17: A Measure of Property Classification - Urban

| Ratio of Commercial-to-Homestead Effective Tax Rates (\$1 million Commercial/Median-Valued Home, real property only) Median |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| New York | New York City | \$452,700 | 7.262 | 1 | Vermont | Burlington | 172,800 | 1.267 | 27 |
| Massachusetts | Boston | 418,500 | 4.251 | 2 | Montana | Billings | 154,500 | 1.264 | 28 |
| Colorado | Denver | 248,400 | 3.497 | 3 | Ohio | Columbus | 155,900 | 1.226 | 29 |
| Arizona | Phoenix | 243,400 | 3.127 | 4 | Connecticut | Bridgeport | 487,300 | 1.222 | 30 |
| Hawaii | Honolulu | 577,800 | 2.899 | 5 | Texas | Houston | 142,500 | 1.184 | 31 |
| Illinois | Chicago | 265,400 | 2.611 | 6 | Florida | Jacksonville | 166,600 | 1.176 | 32 |
| Louisiana | New Orleans | 152,600 | 2.601 | 7 | Arkansas | Little Rock | 118,900 | 1.167 | 33 |
| Minnesota with state C/I | Minneapolis | 237,700 | 2.548 | 8 | Michigan | Detroit | 169,200 | 1.164 | 34 |
| Rhode Island | Providence | 291,600 | 2.496 | 9 | New Mexico | Albuquerque | 171,700 | 1.164 | 35 |
| Iowa | Des Moines | 145,100 | 2.381 | 10 | Alaska | Anchorage | 195,700 | 1.111 | 36 |
| Kansas | Wichita | 106,300 | 2.227 | 11 | North Dakota | Fargo | 132,600 | 1.111 | 36 |
| South Carolina | Columbia | 133,700 | 2.143 | 12 | Oklahoma | Oklahoma City | 115,700 | 1.085 | 38 |

| Mississippi | Jackson | 131,700 | 1.938 | 17 | Wyoming | Cheyenne | 132,300 | 1.014 | 43 |
| Minnesota minus state C/I | Minneapolis | 237,700 | 1.875 | -- | Nevada | Las Vegas | 300,100 | 1.012 | 44 |
| Utah | Salt Lake City | 169,900 | 1.870 | 18 | Nebraska | Omaha | 137,300 | 1.009 | 45 |
| New York | Buffalo | 97,500 | 1.723 | 19 | North Carolina | Charlotte | 179,600 | 1.000 | 46 |
| U.S. Average |  |  | 1.757 |  | New Hampshire | Manchester | 136,500 | 1.000 | 47 |
| Illinois | Aurora | 265,400 | 1.703 | 19 | Oregon | Portland | 238,000 | 1.000 | 47 |
| Indiana | Indianapolis | 124,600 | 1.697 | 20 | Washington | Seattle | 310,300 | 1.000 | 47 |
| Tennessee | Memphis | 150,100 | 1.600 | 22 | New Jersey | Newark | 414,400 | 1.000 | 50 |
| Pennsylvania | Philadelphia | 211,000 | 1.559 | 23 | Delaware | Wilmington | 211,000 | 1.000 | 51 |
| Idaho | Boise | 161,800 | 1.453 | 24 | Virginia | Virginia Beach | 192,000 | 0.953 | 52 |
| South Dakota | Sioux Falls | 137,700 | 1.381 | 25 | Kentucky | Louisville | 136,800 | 0.911 | 53 |
| Georgia | Atlanta | 166,500 | 1.315 | 26 |  |  |  |  |  |

A ratio of 1.0 indicates that no classification is apparent (at least as it relates to the relationship between these two property types, which are typically the target of most classification systems). A ratio greater than 1.0 indicates some degree of classification, broadly defined, with higher values reflecting a greater degree of classification.

The ratios were calculated for real property only, after adjusting for differences in assessment practices. Differences in the quality of assessments among various classes of property can produce a de facto classification system even in the absence of statutory classification schemes.

States that rank near the top of this list do so because of extreme differences in classification ratios between these two types of property. For instance, in New York City, residential property is assessed at $8 \%$ of value while commercial property is assessed at $45 \%$ of value. In other cases differences in tax rates and/or homestead exemptions or credits account for the differences, such as in Boston; where roughly $25 \%$ of the value of the median home is excluded from taxation, and the homestead tax rate is roughly one-third that of commercial and industrial properties.

There were two locations that had a ratio below 1.000 , meaning that their classification systems favor commercial properties over homesteads. This is simply a function of applying the sales
ratio. Commercial properties in these locations are underassessed when compared to homestead properties.

Minnesota's ranking in the classification ratio measure dropped from $8^{\text {th }}$ (with a ratio of 2.379) in 2002 to $18^{\text {th }}$ (with a ratio of 1.799 ) in 2004, and 2005 (with a ratio of 1.875) for 2005. This disregards the statewide levy on commercial and industrial property instituted during the 2001 property tax reform. Including that levy increases the ratio to 2.548 , giving Minnesota the $8^{\text {th }}$ highest ratio overall. However, the 1.875 ratio is a more accurate measure of the fairly substantial degree of classification in effect at the local level in Minnesota between business and residential property. Figure 2 below shows how this ratio has changed since 1998.

Figure 2: Various Ratios of Urban Commercial-to-Median Homestead ETRs, 1998-2005

Note: The ratios shown are calculated as the effective tax rate (ETR) of a $\$ 1$ million commercial property to the ETR of the median value home, averaged for each of the largest cities in each state that was included in the studies for all five years.

## Commercial Property Tax Rankings

## Urban

Table 36 and Table 42 on pages 23 and 32 show the property tax rankings for commercial property (assumed to be office buildings of selected values). The three commercial properties studied are parcels consisting of: $\$ 100,000$ real property value with $\$ 20,000$ of personal property; $\$ 1$ million real property value with $\$ 200,000$ of personal property; and $\$ 25$ million real property value with $\$ 5$ million of personal property.

Minneapolis' commercial property tax rankings remained stable since 2004. The $\$ 100,000$ parcel moved up two places to $21^{\text {st }}$, the $\$ 25$ million parcel moved down two places to $11^{\text {th }}$, and the $\$ 1$ million parcel's ranking were unchanged. The sharp jump in rank between the $\$ 100,000$ and $\$ 1$ million parcels is due to Minnesota's tiered assessment rate for commercial property: value under $\$ 150,000$ is assessed at $1.5 \%$ and property value over $\$ 150,000$ is assessed at $2.0 \%$.

The total tax payable on each parcel increased about $1.5 \%$ from the 2004 tax, and each parcel moved further ahead of the national average. These numbers still represent significant competitive improvement since 1995, when Minnesota's two cities used that year, Minneapolis
and Litchfield, ranked highest in the country for the higher valued parcels. Property tax reform begun in the late 1990s and the additional significant class rate compression and school levy takeover implemented in 2001 (see Table 9 on page iv) are responsible for the improvements in rank through 2002.

A combination of property tax restraint and the falling rate of the statewide property tax on business property ${ }^{*}$ most likely have contributed to the continued improvement through 2004, plus the reduction in reliance on property taxes for financing public schools, which was also part of Minnesota's 2001 property tax reform. The shifting affects of limited market value on residential property is probably the reason for the slight upturn in 2005.
Table 18: Minneapolis Commercial Property Tax Effective Tax Rates (ETR), Taxes Payable 2004 and 2005

| Real Property Value | Taxes Payable 2004 |  |  |  | Taxes Payable 2005 |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | $\begin{aligned} & \text { Total } \\ & \text { Tax } \end{aligned}$ | ETR | Urban |  | $\begin{aligned} & \text { Total } \\ & \text { Tax } \end{aligned}$ | ETR | Urban |  |
|  |  |  | $\begin{gathered} \hline \% \\ \hline \text { U.S. } \end{gathered}$ | Rank |  |  | $\begin{gathered} \text { \% } \\ \text { U.S. } \end{gathered}$ | Rank |
| \$100,000 | \$2,534 | 2.112\% | 104.9 | 23 | \$2,578 | 2.149\% | 106.2 | 21 |
| \$1,000,000 | \$32,229 | 2.686\% | 131.2 | 14 | \$32,736 | 2.728\% | 132.7 | 14 |
| \$25,000,000 | \$834,899 | 2.783\% | 135.2 | 11 | \$847,834 | 2.826\% | 136.9 | 13 |

Minneapolis' ratio of commercial effective tax rates to homestead effective tax rates increased slightly for 2005 , as discussed in the preceding section.

## Rural

Minnesota's rankings for rural commercial property taxes remained stubbornly high for 2005. Table 47 on page 41 details the national rankings, while Table 19 below summarizes our Minnesota findings. There was an upward trend for the lower-valued properties, with the $\$ 100,000$ parcel's ranking rising three spots from our 2004 study, to $14^{\text {th }}$. For higher-valued properties, however, rural commercial property taxes stayed high even with a slight drop in rank. The ranking for the highest valued property ( $\$ 25$ million) dropped one spot from $5^{\text {th }}$ to $6^{\text {th }}$, and the $\$ 1$ million parcel remained in the $7^{\text {th }}$ spot. Total taxes payable rose between $5.5 \%$ to $5.8 \%$ and rose to a level above of the U.S. average. As with the Minneapolis example, ETRs increase as value increases because business real property valued in excess of $\$ 150,000$ is assessed at a higher rate, and therefore a greater proportion of the parcel is taxed. Minnesota's practice of taxing business property 2 to 3 times more heavily than homeowners is more of a competitive problem for Minnesota in rural areas than for urban areas. In spite of significant reduction in disparities between residential and business properties, commercial property taxes in rural Minnesota remain high.
Table 19: Glencoe Commercial Property Tax Effective Tax Rates (ETR), Taxes Payable 2004 and 2005

| Value of Real Property | Taxes Payable 2004 |  |  |  | Taxes Payable 2005 |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | $\begin{gathered} \hline \text { Total } \\ \text { Tax } \\ \hline \end{gathered}$ | ETR | $\begin{gathered} \hline \% \\ \text { U.S. } \end{gathered}$ | Rank | Total Tax | ETR | $\begin{gathered} \hline \% \\ \text { U.S. } \end{gathered}$ | Rank |
| \$100,000 | \$2,276 | 1.897\% | 117.0 | 17 | \$2,403 | 2.003\% | 120.9 | 14 |
| \$1,000,000 | \$28,801 | 2.400\% | 146.0 | 7 | \$30,470 | 2.539\% | 152.0 | 7 |
| \$25,000,000 | \$745,585 | 2.485\% | 150.8 | 5 | \$789,014 | 2.630\% | 157.2 | 6 |

[^0]
## The Highest and Lowest Commercial Tax States - Urban

The states whose largest cities had the highest commercial property taxes for all values of property in 2005 were:
Table 20: Urban Cities with Commercial Tax Rankings among the Top Ten for All Values

| State | City |  | $\$ 100,000$ |  | Business | $\$ 1$ million Business |  | $\$ 25$ million Business |  |
| :--- | :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Tax |  | Rank | Tax |  | Rank | Tax |  |  |
| New York | New York City | $\$ 4,641$ | 1 | $\$ 46,411$ | 1 | $\$ 1,160,278$ | 1 |  |  |
| Michigan | Detroit | $\$ 4,612$ | 2 | $\$ 46,117$ | 2 | $\$ 1,152,916$ | 2 |  |  |
| Rhode Island | Providence | $\$ 4,568$ | 3 | $\$ 45,679$ | 3 | $\$ 1,141,975$ | 3 |  |  |
| New York | Buffalo | $\$ 4,399$ | 4 | $\$ 43,993$ | 4 | $\$ 1,099,823$ | 4 |  |  |
| Iowa | Des Moines | $\$ 4,124$ | 5 | $\$ 41,236$ | 5 | $\$ 1,030,896$ | 5 |  |  |
| Illinois | Chicago | $\$ 3,911$ | 6 | $\$ 39,112$ | 6 | $\$ 977,803$ | 7 |  |  |
| Massachusetts | Boston | $\$ 3,562$ | 7 | $\$ 35,621$ | 8 | $\$ 89,530$ | 8 |  |  |
| Maryland | Baltimore City | $\$ 3,521$ | 8 | $\$ 35,208$ | 9 | $\$ 880,200$ | 9 |  |  |
| Pennsylvania | Philadelphia | $\$ 3,482$ | 9 | $\$ 34,822$ | 10 | $\$ 870,540$ | 10 |  |  |

New York City moved into the top spot this year, displacing Detroit. Buffalo, New York is new to the study (added as the second largest city because of the unique nature of the state's largest city) and debuted in the third spot for each parcel value. Baltimore and Philadelphia were also new to the list for 2005, with Baltimore having just missed the Top Ten in 2005, while Pennsylvania moved up nearly 20 spots to enter the Top Ten. (Philadephia business properties are subject to a 46.2 mill Business Use and Occupancy Tax about which we were not informed during previous studies. Including this tax increases the property tax rate by $50 \%$ on commercial, industrial and apartment properties in Philadephia, resulting in the sharp increase in taxes and ranking.)

States with the lowest commercial property taxes for their largest city for 2005 were:
Table 21: Urban Cities with Commercial Tax Rankings among the Bottom Ten for All Values

| State | City |  | $\$ 100,000$ |  | Business | \$1 million Business |  | \$25 million Business |  |
| :--- | :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Tax |  | Rank | Tax | Rank | Tax | Rank |  |  |
| Wyoming | Cheyenne | $\$ 798$ | 53 | $\$ 7,983$ | 53 | $\$ 199,568$ | 53 |  |  |
| Delaware | Wilmington | $\$ 1,030$ | 52 | $\$ 10,300$ | 52 | $\$ 257,494$ | 52 |  |  |
| Hawaii | Honolulu | $\$ 1,054$ | 51 | $\$ 10,539$ | 51 | $\$ 263,471$ | 51 |  |  |
| Virginia | Virginia Beach | $\$ 1,100$ | 50 | $\$ 11,003$ | 50 | $\$ 275,068$ | 50 |  |  |
| Washington | Seattle | $\$ 1,165$ | 49 | $\$ 11,650$ | 49 | $\$ 291,249$ | 49 |  |  |
| North Carolina | Charlotte | $\$ 1,363$ | 48 | $\$ 13,626$ | 48 | $\$ 340,655$ | 48 |  |  |
| Nevada | Las Vegas | $\$ 1,376$ | 47 | $\$ 13,762$ | 47 | $\$ 344,046$ | 47 |  |  |
| California | Los Angeles | $\$ 1,387$ | 46 | $\$ 13,872$ | 46 | $\$ 346,790$ | 46 |  |  |
| Kentucky | Louisville | $\$ 1,393$ | 45 | $\$ 13,925$ | 45 | $\$ 348,132$ | 45 |  |  |
| New Mexico | Albuquerque | $\$ 1,416$ | 44 | $\$ 14,164$ | 44 | $\$ 354,108$ | 44 |  |  |

As with the homestead Bottom Ten list, most of these municipalities ranked near the bottom simply due to low property tax rates. Most of these cities also assess far below market value-notably, Wilmington, Delaware, with a sales ratio of $33.88 \%$.

## Industrial Property Tax Rankings

Industrial property is considered separately because industrial properties tend to have higher proportions of personal property than commercial properties, and states often vary in their tax treatment of personal property.

We used the same set of real value assumptions as used for the commercial property ( $\$ 100,000$, $\$ 1$ million, and $\$ 25$ million). In our first four studies, we assumed that personal property value

## III. Findings

comprised $50 \%$ of the total parcel value. Recent research corroborates that assumption, but there was evidence of enough variability among the states that we added a second example to the body of our report that assumes $40 \%$ real property and $60 \%$ personal property for industrial parcels. This provides a range of personal property percentages within which we believe most industrial parcels will fall.

We also specified the mix of personal property between machinery/equipment, inventories, and fixtures (see the methodology section in Appendix A for definitions). For all assumptions, the mix was set in the ratio of 5:4:1 - that is, for properties with $50 \%$ personal and $50 \%$ real property, the $\$ 100,000$ real value parcel is assumed to contain $\$ 100,000$ worth of total personal property, of which $\$ 50,000$ is assumed to be machinery and equipment; $\$ 40,000$ inventories; and $\$ 10,000$ fixtures. For properties with $60 \%$ personal and $40 \%$ real property, the $\$ 100,000$ real value parcel is assumed to contain $\$ 150,000$ worth of total personal property, of which $\$ 75,000$ is assumed to be machinery and equipment; $\$ 50,000$ inventories; and $\$ 15,000$ fixtures. The same percentages are used for the $\$ 1$ million and $\$ 25$ million examples.

## Urban

Table 37 on page 25 shows the results of the urban industrial property tax calculations for parcels with personal property comprising $50 \%$ of total value. Table 38 on page 27 shows the results of the urban industrial property tax ranking for parcels whose total value includes $40 \%$ personal property.

Minneapolis' industrial property tax rankings, total taxes paid and burden compared to the national average all dropped considerably since 2004, mainly from a drop in the sales ratio from $99.6 \%$ in 2004 to $87.9 \%$ for 2005. (Because there were so few industrial sales in Minneapolis in recent years, the sales ratio is more volatile from year to year than when there are more sales.) Assuming equal proportions of real and personal property, the $\$ 100,000$ parcel dropped 8 places, from $25^{\text {th }}$ to $33^{\text {rd }}$. The $\$ 1$ million parcel dropped 5 spots to $23^{\text {rd }}$, and the $\$ 25$ million parcel also dropped 8 places to $21^{\text {st }}$. Total taxes payable fell just over $17 \%$ for each parcel. Assuming a valuation mix of $40 \%$ from real and $60 \%$ from personal property, Minneapolis' rankings also dropped, and the declines in total taxes payable were identical to the previous examples.

Compared to the other 49 largest cities in the country, the burden on Minneapolis industrial properties is still low. As Table 22 below indicates, Minneapolis' rankings ranged from $31^{\text {st }}$ to the $\$ 100,000$ parcel to $22^{\text {nd }}$ for the $\$ 25$ million, if real and personal property are in equal proportions; and ranged from $35^{\text {th }}$ for the $\$ 100,000$ parcel to $28^{\text {th }}$ for the $\$ 25$ million parcel if personal property comprises $60 \%$ of the total value of the parcel.

Minnesota's full exemption of personal property (machinery, equipment, inventories, and fixtures) for most industrial firms (except utilities) is the reason Minnesota's industrial property tax rankings are lower than the commercial rankings, even though the total taxes payable for industrial parcels are equal to commercial parcels of the same value in the same location.

Table 22: Minneapolis Industrial Property Tax Effective Tax Rates (ETR), Taxes Payable 2004 and 2005

| Real Property <br> Value | Taxes Payable 2004 |  |  |  | Taxes Payable 2005 |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | $\begin{aligned} & \text { Total } \\ & \text { Tax } \end{aligned}$ | ETR | Urban |  | $\begin{aligned} & \text { Total } \\ & \text { Tax } \end{aligned}$ | ETR | Urban |  |
|  |  |  | $\begin{gathered} \text { \% } \\ \text { U.S. } \end{gathered}$ | Rank |  |  | $\begin{gathered} \text { \% } \\ \text { U.S. } \end{gathered}$ | Rank |
| 50\% Pers. Prop |  |  |  |  |  |  |  |  |
| \$100,000 | \$3,112 | 1.556\% | 97.9 | 25 | \$2,578 | 2.149\% | 83.8 | 33 |
| \$1,000,000 | \$39,581 | 1.979\% | 121.0 | 18 | \$32,736 | 2.728\% | 103.2 | 23 |
| \$25,000,000 | \$1,025,351 | 2.051\% | 124.7 | 13 | \$847,834 | 2.826\% | 106.6 | 21 |
| 60\% Pers. Prop |  |  |  |  |  |  |  |  |
| \$100,000 | \$3,112 | 1.556\% | 83.6 | 35 | \$2,578 | 2.149\% | 72.1 | 38 |
| \$1,000,000 | \$39,581 | 1.979\% | 103.7 | 26 | \$32,736 | 2.728\% | 89.3 | 30 |
| \$25,000,000 | \$1,025,351 | 2.051\% | 107.0 | 24 | \$847,834 | 2.826\% | 92.1 | 28 |

(Note: the significant drop in rank from 2004 results mainly from a drop in the sales ratio from $99.6 \%$ in 2004 to $87.9 \%$ for 2005 .)
As our examples indicate, the benefit of the personal property exemption increases as the amount of personal property value relative to real property value increases.

## Rural

Minnesota's rural industrial property taxes ranked roughly ten spots higher than the taxes for comparable industrial properties in Minneapolis, even though the ETRs and total taxes payable were lower than similar properties in Minneapolis. The increase in this property type's rank from 2004 also is due mainly to changes in the sales ratio for industrial properties in Glencoe, as was the case for Minneapolis examples, too. For both property mix assumptions, Glencoe's ranking for the $\$ 100,000$ parcel rose 4 places (from $25^{\text {th }}$ to $21^{\text {st }}$ for the $50 / 50$ mix and from $32^{\text {nd }}$ to $28^{\text {th }}$ for the $40 / 60 \mathrm{mix}$ ). The tax on these properties remained below the national average.

Table 23: Glencoe Industrial Property Tax Effective Tax Rates (ETR), Taxes Payable 2004 and 2005

| Value of <br> Real Property | Taxes Payable 2004 |  |  |  | Taxes Payable 2005 |  |  |  |  |
| ---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Total <br> Tax | ETR | \% <br> U.S. | Rank | Total <br> Tax | ETR | \% <br> U.S. | Rank |  |
| 50/50 Land |  |  |  |  |  |  |  |  |  |
| vs. Personal |  |  |  |  |  |  |  |  |  |
| $\$ 100,000$ | $\$ 2,276$ | $1.897 \%$ | 88.9 | 25 | $\$ 2,403$ | $2.003 \%$ | 94.5 | 21 |  |
| $\$ 1,000,000$ | $\$ 28,801$ | $2.400 \%$ | 110.4 | 17 | $\$ 30,470$ | $2.539 \%$ | 117.6 | 14 |  |
| $\$ 25,000,000$ | $\$ 745,585$ | $2.485 \%$ | 114.0 | 16 | $\$ 789,014$ | $2.630 \%$ | 121.5 | 11 |  |
| 40/60 Land |  |  |  |  |  |  |  |  |  |
| vs. Personal |  |  |  |  |  |  |  |  |  |
| $\$ 100,000$ | $\$ 2,276$ | $1.897 \%$ | 76.2 | 32 | $\$ 2,403$ | $2.003 \%$ | 81.6 | 28 |  |
| $\$ 1,000,000$ | $\$ 28,801$ | $2.400 \%$ | 94.8 | 22 | $\$ 30,470$ | $2.539 \%$ | 101.8 | 20 |  |
| $\$ 25,000,000$ | $\$ 745,585$ | $2.485 \%$ | 98.0 | 20 | $\$ 789,014$ | $2.630 \%$ | 105.2 | 18 |  |

Our national results can be found in Table 48 and Table 49 on pages 43 through 45 .

## The Highest and Lowest Industrial Tax States - Urban

The states whose largest cities ranked in the Top Ten for all three industrial values for parcels with $50 \%$ personal property valuation were:

## III. Findings

Table 24: Urban Cities with Industrial Tax Rankings among the Top Ten for All Values (for parcels with $\mathbf{5 0 \%}$ personal property valuation)

| State | City | \$100,000 Business |  | \$1 million Business |  | \$25 million Business |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Tax | Rank | Tax | Rank | Tax | Rank |
| Michigan | Detroit | \$6,549 | 1 | \$65,490 | 1 | \$1,637,238 | 1 |
| South Carolina | Columbia | \$6,174 | 2 | \$61,740 | 2 | \$1,543,500 | 2 |
| Texas | Houston | \$6,132 | 3 | \$61,323 | 3 | \$1,533,075 | 3 |
| Mississippi | Jackson | \$5,132 | 4 | \$51,324 | 5 | \$1,283,101 | 5 |
| Louisiana | New Orleans | \$4,969 | 5 | \$49,689 | 6 | \$1,242,236 | 6 |
| New York | New York City | \$4,641 | 6 | \$46,411 | 7 | \$1,160,278 | 7 |
| Indiana | Indianapolis | \$4,549 | 7 | \$45,490 | 8 | \$1,137,253 | 8 |
| Missouri | Kansas City | \$4,454 | 8 | \$44,538 | 9 | \$1,113,444 | 9 |
| New York | Buffalo | \$4,399 | 9 | \$43,993 | 10 | \$1,099,823 | 10 |

The tax burden on industrial properties in Columbia, South Carolina's fell since 2004, and Detroit regained the top ranking. New to the Top Ten in 2005 was Jackson, Mississippi, which just missed the Top Ten in 2004, and Buffalo, New York. Wichita, Kansas dropped from the list, mainly because of slight reduction in the property tax rate and the sales ratio for industrial properties. Providence, Rhode Island fell from the list because revaluation reduced the sales ratio for industrial properties.

The states whose largest cities ranked in the Top Ten for all three industrial values for parcels with $60 \%$ personal property valuation were:

Table 25: Urban Cities with Industrial Tax Rankings among the Top Ten for All Values (for parcels with 60\% personal property valuation)

| State | City | \$100,000 Business |  | \$1 million Business |  | \$25 million Business |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Tax | Rank | Tax | Rank | Tax | Rank |
| Michigan | Detroit | \$7,907 | 1 | \$79,069 | 1 | \$1,976,730 | 1 |
| Texas | Houston | \$7,665 | 2 | \$76,654 | 2 | \$1,916,343 | 2 |
| South Carolina | Columbia | \$7,332 | 3 | \$73,316 | 3 | \$1,832,906 | 3 |
| Mississippi | Jackson | \$6,416 | 4 | \$64,160 | 5 | \$1,603,988 | 5 |
| Louisiana | New Orleans | \$6,254 | 5 | \$62,536 | 6 | \$1,563,405 | 6 |
| Indiana | Indianapolis | \$5,642 | 6 | \$56,421 | 7 | \$1,410,521 | 7 |
| Missouri | Kansas City | \$5,245 | 7 | \$52,447 | 8 | \$1,311,166 | 10 |
| Kansas | Wichita | \$5,207 | 8 | \$52,073 | 9 | \$1,323,085 | 9 |

The states whose largest cities had the lowest industrial taxes for parcels with $50 \%$ personal property valuation were:

Table 26: Urban Cities with Industrial Tax Rankings among the Bottom Ten for All Values
(for parcels with $\mathbf{5 0 \%}$ personal property valuation)

| State |  | City |  | $\$ 100,000$ |  | Business | $\$ 1$ million Business |  | $\$ 25$ million Business |  |
| :--- | :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Tax |  | Rank | Tax |  | Rank | Tax | Rank |  |  |
| Delaware | Wilmington | $\$ 1,030$ | 53 | $\$ 10,300$ | 53 | $\$ 257,494$ | 53 |  |  |  |
| Hawaii | Honolulu | $\$ 1,082$ | 52 | $\$ 10,821$ | 52 | $\$ 270,521$ | 52 |  |  |  |
| Virginia | Virginia Beach | $\$ 1,117$ | 51 | $\$ 11,173$ | 51 | $\$ 279,318$ | 51 |  |  |  |
| Wyoming | Cheyenne | $\$ 1,293$ | 50 | $\$ 12,929$ | 50 | $\$ 323,232$ | 50 |  |  |  |
| Washington | Seattle | $\$ 1,549$ | 49 | $\$ 15,486$ | 49 | $\$ 387,140$ | 49 |  |  |  |
| Kentucky | Louisville | $\$ 1,557$ | 48 | $\$ 15,568$ | 48 | $\$ 389,189$ | 48 |  |  |  |
| New Hampshire | Manchester | $\$ 1,594$ | 47 | $\$ 15,942$ | 47 | $\$ 398,558$ | 47 |  |  |  |
| South Dakota | Sioux Falls | $\$ 1,724$ | 46 | $\$ 17,239$ | 46 | $\$ 430,971$ | 46 |  |  |  |
| North Carolina | Charlotte | $\$ 1,833$ | 45 | $\$ 18,333$ | 45 | $\$ 458,325$ | 45 |  |  |  |
| Nevada | Las Vegas | $\$ 1,838$ | 44 | $\$ 18,382$ | 44 | $\$ 459,553$ | 44 |  |  |  |

Sioux Falls, South Dakota dropped into the Bottom Ten in 2005, replacing Lexington-Fayette Kentucky, which was removed from the study.

The urban cities with the lowest taxes for industrial parcels with $60 \%$ personal property were:
Table 27: Urban Cities with Industrial Tax Rankings among the Bottom Ten for All Values (for parcels with $\mathbf{6 0 \%}$ personal property valuation)

| State |  | City |  | $\$ \mathbf{2 0 0 , 0 0 0}$ Business |  | \$1 million Business |  | $\$ 25$ million Business |  |
| :--- | :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Tax |  | Rank | Tax |  | Rank | Tax | Rank |  |
| Delaware | Wilmington | $\$ 1,030$ | 53 | $\$ 10,300$ | 53 | $\$ 257,494$ | 53 |  |  |
| Hawaii | Honolulu | $\$ 1,082$ | 52 | $\$ 10,821$ | 52 | $\$ 270,521$ | 52 |  |  |
| Virginia | Virginia Beach | $\$ 1,274$ | 51 | $\$ 12,738$ | 51 | $\$ 318,443$ | 51 |  |  |
| Wyoming | Cheyenne | $\$ 1,538$ | 50 | $\$ 15,379$ | 50 | $\$ 384,469$ | 50 |  |  |
| New Hampshire | Manchester | $\$ 1,594$ | 49 | $\$ 15,942$ | 49 | $\$ 398,558$ | 49 |  |  |
| South Dakota | Sioux Falls | $\$ 1,724$ | 48 | $\$ 17,239$ | 48 | $\$ 430,971$ | 48 |  |  |
| Kentucky | Louisville | $\$ 1,820$ | 47 | $\$ 18,196$ | 47 | $\$ 454,910$ | 47 |  |  |
| Washington | Seattle | $\$ 1,836$ | 46 | $\$ 18,362$ | 46 | $\$ 459,059$ | 46 |  |  |
| New Jersey | Newark | $\$ 2,171$ | 45 | $\$ 21,714$ | 45 | $\$ 542,858$ | 45 |  |  |
| Nevada | Las Vegas | $\$ 2,185$ | 44 | $\$ 21,847$ | 44 | $\$ 546,183$ | 44 |  |  |

Here Newark, New Jersey replaced Charlotte, North Carolina; showing how important the personal property exemption is. Five of the ten locales in Table 27, including Newark, exempt machinery, equipment, inventories and fixtures.

## A Note about the Share of Personal Property Tax to Total Value

For states with personal property exemptions, tax rankings decrease in all categories of industrial property as the assumed percentage of personal property increases, emphasizing the importance of the personal property tax assumption used. In the first four versions of this study, MTA used a $50 \%$ real value and $50 \%$ personal value assumption to calculate the main comparison tables, but included examples in the text that use higher portions of personal property value.

It is difficult to say which personal property assumptions are best to use. Since Minnesota has not taxed personal property for more than 30 years, the Minnesota Department of Revenue has no Minnesota-specific data that could be used to determine conclusively the typical personal property percentage for the various sizes of commercial and industrial businesses.

In the 2002 study, MTA concluded that "a more definitive evaluation of these assumptions is warranted", and followed up that recommendation by using real versus personal property information of an actual company with multiple holdings throughout the country. The average percentage of personal property value to total value for the company's industrial property in Minnesota was $53 \%$, with real property comprising the remaining $47 \%$. These percentages were close to our original assumption of $50 \%$ for each type of property. The average percentage of personal property for industrial parcels across all states was closer to $59 \%$.

Because this is a national study, MTA felt it appropriate to include two examples of industrial property based on this research. The two chosen were the $50 \%$ personal and $50 \%$ real example used in all previous studies, and which is more nearly reflective of Minnesota's average, plus an example that assumes $60 \%$ of total value is personal property, which is closer to the average in some other states.

## III. Findings

## Apartment Property Tax Rankings

## Urban

Property taxes were calculated on a 20 -unit, $\$ 600,000$ unfurnished apartment building with $\$ 30,000$ of personal property. Our findings are presented on Table 39 and Table 45 on pages 29 and 38, and they show that Minneapolis' apartment tax of $\$ 9.950$ for such a building was $13.3 \%$ below the national average, and its rank compared to other urban cities was $28^{\text {th }}$ highest, while its rank compared to the largest 50 cities in the nation was $23^{\text {rd }}$. This continued the decrease seen since the pre-2001 property tax reform ranking of $7^{\text {th }}$ highest in our 2000 study. With the elimination of the general education levy, along with favorable classification changes, apartment taxes were greatly reduced, and the tax burden has continued to fall both absolutely and relatively since then as the lower class rates have taken affect. (In the course of preparing the 2005 study, we discovered that our 2004 results for Minnesota were in error. The table below reflects corrected results for apartments for 2004.)

Table 28: Minneapolis Apartment Property Tax Effective Tax Rates (ETR), Taxes Payable 2004 and 2005

| Real <br> Property <br> Value | Taxes Payable 2004 |  |  |  | Taxes Payable 2005 |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Total Tax | ETR | Urban |  | Total Tax | ETR | Urban |  |
|  |  |  | $\begin{gathered} \text { \% } \\ \text { U.S. } \end{gathered}$ | Rank |  |  | \% U.S. | Rank |
| \$600,000 | \$10,453 | 1.659\% | 92.3 | 26 | \$9,950 | 1.579\% | 86.7 | 28 |

## Rural

Table 50 on page 47 shows Minnesota's ranking for rural apartment taxes stabilized; after dropping from $1^{\text {st }}$ in 2000 (where it had been since 1995) to $13^{\text {th }}$ in 2002 to $29^{\text {th }}$ in 2004 (some of that drop can be attributed to the change in cities used in the study). For 2005 the ranking remained unchanged at 29 . The tax on the Glencoe apartment rose slightly to $\$ 8,273$, which was still $15.0 \%$ below the U.S. average. (Table 29 below contains corrected numbers for 2004. See the comment above in the urban apartment tax analysis.)

The significant reductions in apartment taxes were the result of a deliberate effort to reduce those taxes as part of Minnesota's 2001 property tax reform.
Table 29: Glencoe Apartment Property Tax Effective Tax Rates (ETR), Taxes Payable 2004 and 2005

| Value of <br> Real Property | Taxes Payable 2004 |  |  |  | Taxes Payable 2005 |  |  |  |
| ---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Total <br> Tax | ETR | \% <br> U.S. | Rank | Total <br> Tax | ETR | \% <br> U.S. | Rank |
| $\$ 600,000$ | $\$ 8,150$ | $1.293 \%$ | 83.4 | 29 | $\$ 8,273$ | $1.313 \%$ | 84.8 | 29 |

## The Highest and Lowest Apartment Tax States - Urban

The states whose largest cities had high apartment taxes in 2005 were:

Table 30: Urban Cities with Apartment Tax Rankings among the Top Ten

| State | City |  | \$600,000 Apartment |  |
| :--- | :--- | :---: | :---: | :---: |
|  | Tax | Rank |  |  |
| New York | Buffalo | $\$ 26,396$ | 1 |  |
| New York | New York City | $\$ 26,151$ | 2 |  |
| Michigan | Detroit | $\$ 25,812$ | 3 |  |
| Iowa | Des Moines | $\$ 24,741$ | 4 |  |
| Rhode Island | Providence | $\$ 22,952$ | 5 |  |
| Tennessee | Memphis | $\$ 18,608$ | 6 |  |
| Texas | Houston | $\$ 16,861$ | 7 |  |
| Mississippi | Jackson | $\$ 16,162$ | 8 |  |
| Maryland | Baltimore City | $\$ 15,932$ | 9 |  |
| Wisconsin | Milwaukee | $\$ 15,799$ | 10 |  |

Buffalo debuted in the top spot for apartment taxes, bumping companion New York City to number two. New to the Top Ten in 2005 was Maryland, which experienced increases in both its property tax rate and sales ratio (showing an improvement in the quality of assessments) and Wisconsin rejoined the list after leaving in 2004. Chicago, Illinois; Bridgeport, Connecticut and Charleston, South Carolina all exited the top 10 list.

The states whose largest cities had the lowest apartment taxes were:
Table 31: Urban Cities with Apartment Tax Rankings among the Bottom Ten

|  |  | \$600,000 Apartment |  |
| :--- | :--- | :---: | :---: |
| State | City | Tax | Rank |
| Hawaii | Honolulu | $\$ 2,141$ | 53 |
| Colorado | Denver | $\$ 3,605$ | 52 |
| Wyoming | Cheyenne | $\$ 3,976$ | 51 |
| Utah | Salt Lake City | $\$ 5,110$ | 50 |
| Virginia | Virginia Beach | $\$ 5,270$ | 49 |
| District of Columbia | Washington | $\$ 5,334$ | 48 |
| Washington | Seattle | $\$ 6,127$ | 47 |
| Delaware | Wilmington | $\$ 6,180$ | 46 |
| New Mexico | Albuquerque | $\$ 6,535$ | 45 |
| Kentucky | Louisville | $\$ 6,728$ | 44 |

Albuquerque, New Mexico and Louisville, Kentucky dropped into the Bottom Ten this year; replacing Boston, Masschusetts and Lexington-Fayette, Kentucky, which is no longer part of the study.

## Degree of Classification, Apartment vs. Homestead

It is useful to know how the effective tax rates on apartments compare with those on residential property as a way of measuring the degree of subsidy provided to homeowners at the expense of renters. Table 32 on the next page shows the ratio of apartment effective tax rates to those of a home valued at the median selling price in each metropolitan area.

## III. Findings

Table 32: Ratio of Apartment Effective Tax Rates (ETRs) to Homestead Rates, Urban Cities (\$600,000 apartment/ Median-valued home)

| State | City | Median Value | $\underline{\text { Ratio }}$ | Rank | State | City | Median Value | Ratio | Rank |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

The subsidy for homeowners versus renters (of $4+$ unit apartments) in Minnesota takes two forms: the market value credit available only to owner-occupied property, and a class rate of $1 \%$ for the first $\$ 500,000$ of home value, compared to a class rate of $1.25 \%$ for apartments.

Minneapolis' apartment-to-home ratio of 1.291 ranked 17 th, down one spot from its 2004 ranking of 16 th, when the ratio was 1.318 . The ratio was $6.6 \%$ below the U.S. average ( 1.291 versus 1.382), but when the city of New York is excluded, an outlier from other cities, Minnesota's ratio was about $1 \%$ higher than is typical of other states, but still down considerably from earlier years as a result of a deliberate policy to reduce apartment taxes.

## IV. Conclusion

This study updates our payable 2004 50-State Property Tax Comparison Study in order to continue to measure the long-term effects of the major property tax reform of the 2001 legislative session, and to satisfy the data needs of a growing number of public policy researchers. Our findings show that the reduction in class disparities this major reform achieved has been largely preserved through four years of experience. The first year of the reform resulted in greater class disparities between business and residential properties, primarily because of the statewide levy enacted as part of the reform. Because that levy goes into the state's General Fund, MTA also measured class rate compression at the local level. The 2001 reform reduced the local component of business property taxes and apartment property taxes without shifting taxes to homeowners in payable 2002.

The lynchpin of the 2001 reforms was to remove the general education levy from local property taxes and replace it with General Fund money. Property taxes statewide fell by about $9 \%$ for 2002, compared to 2001, because of the reforms enacted, even after many local governments raised their levies significantly to take advantage of "room" created by the repeal of the general education levy. Aggregate property tax levies for 2003 returned to just below the level for 2001. It is only for taxes payable in 2004 and beyond that the reform can be appropriately evaluated, since no major property tax changes have been made since 2001.

The measure of class rate compression for this latest study shows that changes put in place as part of the 2001 reform did narrow the gap between business and residential property at the local level and for all property taxes including the statewide levy on business property, but this year the ratio rose slightly; from 1.799 in 2004 to 1.875 for the local component and from 2.438 to 2.458 for the total (see Table 17 on page 6 for the complete rankings). However, these ratios are still far below those measured before the property tax reform of 2001 was enacted. Figure 3 below provides a visual representation of this trend (repeated from its presentation above for convenient reference).

Figure 3: Various Ratios of Urban Commercial-to-Median Homestead ETRs, 1998 - 2005

The reduction in the business to residential ratio for Minnesota between 1998 and 2005 can be attributed to several things:

1. The method used to calculate the statewide property tax on business: Because the levy amount is fixed in statute and increased by a measure of inflation from year to year, the tax rate for the statewide business property tax actually drops when values subject to the tax increase more rapidly than the levy inflator. This has been the case every year since the reform (but will be different for taxes payable in 2006 due to changes made in 2005).
2. The phase-out of limited market value on homes and cabins: This was part of the 2001 reform and has resulted in residential and cabin taxable values rising more rapidly than business property values through 2004. For 2005, however, the economic recovery resulted in rebounding commercial and industrial values, likely outstripping limits on home and cabin values and slightly reversing the reduction. Because cabins are also part of the statewide property tax base, however, the statewide property tax rate can be lower than it otherwise would be as more of the previously exempt value continues to be brought back into the system through the limited market value phase-out. This trend will be slightly offset by the two-year delay in phasing out limited market value from the 2005 session.
3. Compression of class rates: During Minnesota's 1997, 1998, 1999, and 2001 legislative sessions, classification rates were reduced for nearly all classes except the first $\$ 75,000$ of homestead value (the tier amount was raised to $\$ 76,000$ during the 1999 session for taxes payable in 2000 and again during the 2001 session to $\$ 500,000$ for taxes payable in 2002). Future phased-in rate reductions for apartments were part of the 2001 reform. Table 33 below shows class rates for the period 1995-2005 for the classes of property used in this study.

Table 33: Minnesota's Property Classifications and Class Rates, 1995-2005

|  | 1995- |  |  | 2000 |  |  | 2004 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Payable Year $\rightarrow$ | 97 | 1998 | 1999 | \& 2001 | 2002 | 2003 | \&2005 |
| Class 1 (a): Residential Homesteads |  |  |  |  |  |  |  |
| Tier 1 (<\$72,000 Market 1995-97, <\$75K for 1998-99, <\$76K for 2000-01, <\$500K for 2002-05) | 1.00\% | .00\% | 1.00\% | 1.00\% | 1.00\% | 1.00\% | 1.00\% |
| Tier 2 ( $\$ 72,000+$ Market 1995-97, $\$ 75 \mathrm{~K}$ for 1998-99, \$76K for 2000-01, \$500K for 2002-05) | 2.00\% | 1.85\% | 1.70\% | 1.65\% | 1.25\% | .25\% | 1.25\% |
| Class 3 (a): Commercial/Industrial |  |  |  |  |  |  |  |
| First \$100,000 market (\$150,000 for 1998-2005) | 3.00\% | 2.70\% | 2.45\% | 2.40\% | 1.50\% | 1.50\% | 1.50\% |
| Over \$100,000 market ( $>\$ 150,000$ for 1998-2005) | 4.60\% | 4.00\% | 3.50\% | 3.40\% | 2.00\% | 2.00\% | 2.00\% |
| Class 4 (a): Apartments (>=4 units) | 3.40\% | 2.90\% | 2.50\% | 2.40\% | 1.80\% | 1.50\% | 1.25\% |

These classification rate changes, accompanied by the replacement of the state general education levy with state aid as part of the 2001 reform, resulted in an improved relative property tax ranking for Minnesota business and apartment property without detrimental effects on homeowners' taxes.

Progress has been made toward compressing Minnesota's class rates and we commend those involved for moving our property tax system toward accountability. In spite of this progress, however, rural business property taxes remain stubbornly high compared to the rest of the country, and it is rural Minnesota that is most in need of a tax environment conducive to business development and expansion. Also, there is continued pressure to increase the statewide property tax primarily on business property to provide more revenues for state government. Furthermore, the ratio of commercial to residential ETRs in Minnesota is still $11 \%$ higher than the average for
all places in this study. This measure also crept up for 2005, probably due primarily to limited market value for residential property.

Further reductions in the disparity between business and residential property would have a twofold benefit for Minnesota. First, it would more closely align the cost of local public services with the majority of voters, that is, homeowners. This means that more of the tax burden would be in plain view of homeowners instead of being hidden from them in the form of increased business taxes, which are ultimately passed on to homeowners primarily through higher prices and lower wages. Second, business property taxes would be lowered, resulting in a more competitive business environment in the state. For these reasons and more, vigilance is required to preserve the gains in accountability that have been made over the last several years at significant cost to the state's general fund.
IV. Conclusion

VI. Ranking Tables - Rural
$\qquad$

This Page Intentionally Blank

## VIII. Appendix A: Methodology and Assumptions

This study updates the 50-State Property Tax Comparison Study: Payable Year 2004. Included are four distinct classes of property using a standard set of assumptions about their "true" market values and the split between real and personal property. The tax was calculated for variouslyvalued parcels in the largest urban area of each state and the District of Columbia, for the largest fifty cities in the United states, and for a typical rural area in each state. Additional large cities were added to the urban comparison when the largest city was considered not to be typical.

More specific details about key assumptions are provided in the sections below.

## Data Collection

Data for property tax calculations was collected in one of two ways. Where possible, property tax data was collected directly from information available through various state and local websites. Where such reports were not available, property taxes were calculated using a contact-verification approach in which state and local tax experts were asked to provide information. In both cases, this information served as the basis for calculations by the Minnesota Taxpayers Association staff. Those calculations were, in turn, subject to local verification when necessary. Previous research provided contact names of each state's property tax expert, usually a state or local government employee, who would assist us in calculating the property tax and verify background information about their property tax system.

## Components of the Property Tax Calculation

As an aid in reviewing the remaining assumptions of this study, it is helpful to think of the property tax calculation as having five distinct components: (1) a "true" market value (TMV), (2) a local sales ratio (SR), (3) a statutory classification system (classification rate) or other provisions that effectively determine the proportion of the assessor's estimated market value that is taxable (CR), (4) the total local property tax rate (TR), and (5) applicable property tax credits (C). Accordingly, the net local property tax for a given parcel of property is written:

## Net Property Tax $=$ TMV x SR x CR x TR $-\mathbf{C}$

Assumptions about each component are discussed in the sections below.

## True Market Value (TMV)

It is important to note that the calculations for this study start with an assumption about the true market value of the four classes of property. This is the market value of a parcel of property as determined in the local real estate market consisting of arm-length transactions between willing buyers and sellers. This is in contrast to "assessed value" or "estimated market value," which, in most states is the starting point for the tax calculation.

This study assumes the true market value of each property type is the same for each state. For example, the ranking of property taxes on a residential homestead parcel with a true market value of $\$ 150,000$ assumes that the parcel is actually worth $\$ 150,000$ in the local real estate market in each location in each state, regardless of what the local assessor may think the property is worth.

In the cases of some locations the assumed true market value may be very atypical (a $\$ 150,000$ home in Boston, for example). Nevertheless, this study assumes the property exists there. Essentially the goal of this study is to compare the effects of property tax structures. By fixing values we are able to observe the isolated effects of tax structures. That is, we are comparing

## VII. Appendix A: Methodology and Assumptions

property taxes, not local real estate markets. However, we have added a table showing median values for single-family homes in the largest urban area of each state.

The specific market value assumed for each class of property in this report is described below in the section on property classes.

## Sales Ratios (SR)

A unique aspect of this study is the inclusion of the effects of assessment practices on relative tax burdens across the country. It would have been much simpler to start the calculations by fixing the assessor's "estimated market value" for each property. This would have resulted in a comparison of only the statutory property tax structure. However, in every state, the quality of property tax assessments is a significant aspect of the local property tax scene. Omission of this aspect of the property tax calculation would have made this study much less useful.

Sales ratios are simply a measure of the quality of assessments. The sales ratio is determined by comparing assessments to actual sales. If a sales ratio is: above $100 \%$, the property is over assessed, below $100 \%$, the property is under assessed, is $100 \%$, assessments and market values are equal. If the sales ratios are at $100 \%$ that generally indicates that reassessments have just occurred. In some states, sales ratios are used to adjust assessor's values for use in state aid formulas that use local property wealth as a measure of local fiscal capacity. Sales ratios are generally not used in calculating an individual's actual property tax bill; however, some states use an equalization factor for calculating property tax bills, a factor that equalizes assessment values to market values.

In order for the tax liabilities to represent the actual experience of property owners, and to compare "effective" property tax rates across the states, it was important to use the true market value as a point of reference.

We attempted to adjust the assumed true market value of our sample properties with the use of sales ratios applicable to the location and type of property being studied. These are normally county-level sales ratios for the specific classes of property. Where location and class specific ratios were not available, we tried to use the ratio most applicable to the property (either a statewide ratio for the class, or in some cases, a county ratio applicable to all property classes).

By applying sales ratios, this study recognizes that our $\$ 150,000$ residential homestead may be "on the books" at $\$ 155,000$ in one location, and $\$ 140,000$ in another, and that the actual tax on the property will be based on these "estimates" of market value. In this study, if the relevant sales ratio in a given location is $93 \%$, we convert the $\$ 150,000$ true market value to $\$ 139,500$ ( $\$ 150,000 \mathrm{x} .93$ ) before applying the provisions of the local property tax.

It is important that we use sales ratios in this study because our fixed reference point for all calculations is an assumed true market value.

In the case of personal property, sales ratios are not used. Many states do not have sales ratios for personal property or assume they are $100 \%$. Personal property assessments are often not marketbased, but based on depreciation schedules and other accounting techniques. Consequently, we simply set the "assessment value" of personal property by assumption, side-stepping the myriad ways a state might arrive at that number.

## Classification Rates (CR)

The third component of the property tax calculation involves subjecting the assessor's estimated market value to provisions designed to affect the distribution of property tax levies, namely statutory classification or differential assessment schemes.

In the absence of classification or differential assessments, the distribution of property tax burdens by class of property will reflect the distribution of the assessor's estimated market values, assuming the properties are located in the same set of taxing jurisdictions. That is, a home assessed at $\$ 100,000$ and a business with the same assessment would pay identical property taxes and their effective tax rates (tax as a percent of assessed value) would be the same.

In most states, classification schemes are set by state legislatures. In a few states classification is partly determined by local governments.

Because of the wide variation in the quality of assessments across the states, particularly across classes of property, many states that appear to have no classification scheme may in fact have significant classification via uneven assessments across classes of property, in some cases, perhaps, in violation of state constitution uniformity provision. Some states, like Minnesota, enforces strict standards of assessment quality (sales ratio studies, state orders adjusting values, state certification of assessors, etc.) and put their classification policy in statute.

## Total Local Tax Rate (TR)

Tax rates requested were state and local, payable 2005 applicable to the greatest number of parcels in the largest urban area of each state. "Payable 2005 tax rate" was defined as the tax rate used to calculated the property taxes with a lien date originating in 2005, regardless of the date(s) on which payments are due. In any one city, there may be many different taxing jurisdictions, essentially intersections of city, county, school district, and special taxing district. We asked for the local tax rates for the intersection with the largest number of properties.

We were careful to include the tax rate for all taxing jurisdictions that "normally" levy against real and personal property (namely, cities, counties, school districts, and special taxing districts). Special assessments were excluded from this study since they are more in the nature of user charges, do not affect a majority of parcels, and are usually not sources of general revenue.

## Credits (C)

The final step in the tax calculation is to recognize any general deductions from the gross property tax calculations (credits), but these are rare. More common are circuit-breaker refunds which provide homestead reductions based on the gross tax of the property and property owner's income. In our homestead examples we allowed for the effects of circuit-breakers assuming the homeowner has income from wages only of $\$ 40,000$ and $\$ 80,000$ for the $\$ 70,000$ and $\$ 150,000$ homes, respectively. However, we found no state circuit-breaker program that provided relief in our homestead examples.

Any other credits that apply to a majority of parcels of the specified type were included in our calculations.

## Property Classes and True Market Values

The four hypothetical properties studied in this report are (1) residential homesteads, (2) commercial property, (3) industrial property, and (4) apartments.

These classes of property were selected to provide information about certain recurring property tax reform themes in the State of Minnesota, namely the tax on homesteads relative to those on business and apartment property. Other classes of property were omitted either because of their complexity (public utilities, farms), or because the need for information about them was less urgent, at least in Minnesota. The four classes of property studied comprise nearly $80 \%$ of all the market value of real and personal property in Minnesota.

## VII. Appendix A: Methodology and Assumptions

For the homestead property, we assumed two different values of real property, a low value and a high value. Apartment property consists of only one value. This updated study added a third value of $\$ 25$ million for commercial and industrial property. All classes of property contained a corresponding set of assumptions about personal property. While this may seem an unnecessary complication to many readers, note that the Minnesota property tax system includes "tiered" classifications based on value (similar to income tax brackets). In Minnesota, the first $\$ 500,000$ of estimated market value of a residential home is taxed at $80 \%$ the rate applicable to the value over $\$ 500,000$. Business value over $\$ 150,000$ is taxed about 1.4 times more heavily than value under \$150,000.

Taxes were calculated for the four classes of property in the largest urban area of each state and the District of Columbia, plus the additional cities requested by participating member NTC states. The following table summarizes the property classes and assumed true market values (and assessed value of personal property) used for each class.

PROPERTY CLASSES AND TRUE MARKET VALUES
Values of Property

| Class | Real | Mach. \& Equip. | Inventories | Fixtures | Total |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Homestead | \$150,000 | \$0 | \$0 | \$0 | \$150,000 |
|  | \$300,000 | \$0 | \$0 | \$0 | \$300,000 |
| Apartments | \$600,000 | \$0 | \$0 | \$30,000 | \$630,000 |
| Commercial | \$100,000 | \$0 | \$0 | \$20,000 | \$120,000 |
|  | \$1,000,000 | \$0 | \$0 | \$200,000 | \$1,200,000 |
|  | \$25,000,000 | \$0 | \$0 | \$5,000,000 | \$30,000,000 |
| Industrial | \$100,000 | \$50,000 | \$40,000 | \$10,000 | \$200,000 |
| (50\% Personal) | \$1,000,000 | \$500,000 | \$400,000 | \$100,000 | \$2,000,000 |
|  | \$25,000,000 | \$12,500,000 | \$10,000,000 | \$2,500,00 | \$50,000,000 |
| Industrial (60\% Personal) | \$100,000 | \$75,000 | \$60,000 | \$15,000 | \$250,000 |
|  | \$1,000,000 | \$750,000 | \$600,000 | \$150,000 | \$2,500,000 |
|  | \$25,000,000 | \$18,750,000 | \$15,000,000 | \$3,750,000 | \$62,500,000 |

## Real and Personal Property

The treatment of personal property is a significant part of the property tax in every state. To get an appropriate ranking of the property taxes on all classes of property, and particularly personal property, it is important to make specific assumptions about the amount of personal property associated with each example.

As the table above shows, we made specific assumptions about the amount of personal property associated with each property example. We define the types of property as follows:

## Real Property

Property consisting of land and buildings not classified as personal property for tax purposes.

## Personal Property - Machinery and Equipment

Large and ponderous equipment, generally not portable and often mounted on special foundations. It would include such items as large printing presses and assembly robots.

## Personal Property - Inventories

This includes raw materials, unfinished products, supplies and similar items.

## Personal Property - Fixtures

Fixtures include such items as home or office furnishings, display racks, tools and similar items, but excluding motor vehicles. In the case of apartments, it would include such things as stoves, refrigerators, garbage disposals, air conditioners, drapes, and lawn care equipment.

The specific mix of real and personal property obviously varies by industry and location. Since some states tax most personal property and other states exempt all personal property, the tax rankings, particularly for the industrial example, are sensitive to the assumed mix of values.

In the body of this report, we present industrial rankings based on a $50 \%-50 \%$ and $40 \%-60 \%$ mix of real and personal property value, respectively.

This study does not include intangibles such as bank balances or financial securities in the property tax calculations.

## Effective Tax Rates (ETRs)

Repeated reference has already been made to the concept of effective tax rates. In contrast to statutory tax rates that generally apply to taxable values, in this study effective tax rates are used to express the relationship between net property taxes and the true market value of the property. By including the effects of all statutory tax provisions as well as the effects of local assessment practices, effective tax rates have the virtue of allowing more meaningful comparisons across states and property types.

The comparison tables included in this report show actual dollar taxes and effective tax rates ranked from highest to lowest as well as alphabetically.

## Special Property Tax Provisions

This study excludes all "special property tax provisions." These are defined as provisions that, in practice, apply to less than half of all taxpayers for a given class of property. Special provisions are normally triggered by special circumstances or attributes of the taxpayer or property. Examples would include senior tax deferrals, and special valuation exclusions based on age, health or special use.

The goal of this study is to compare the actual tax experience of the largest number of taxpayers in the selected jurisdictions.

## What Do Rankings Mean?

Property tax rankings must be evaluated in the broader context of each state's fiscal system. The level of property taxes in each state reflects the level of local spending there, intergovernmental aids paid to local governments, the relative use of non-property tax sources of financing public services such as local income or sales taxes and fees, for selected classes of property, state and local policies that affect the distribution of the property tax burden across properties.

Minnesota Taxpayers Association
85 East Seventh Place
Suite 250
Saint Paul, Minnesota 55101

[^0]:    *Minnesota's statewide property tax on business and cabin property began with a dollar amount of levy specified in statute (about $\$ 592$ million in 2002, the first year) that is increased by the Implicit Price Deflator for State and Local Government Purchases each year. That dollar amount is divided by the statewide property tax base of business and cabin property. Because those values have grown faster than the statutory growth of the levy amount, the property tax rate for the statewide tax has declined each year since its inception in 2002.
