Question Chris Tyler owns and operates Surf's Up, a shop in Florida that sells surfboards and beachwear. The shop has been very successful, and now Chris is thinking of manufacturing his own brand of surfboards. Chris discussed the following with you:

- 1. He plans to add value by making boards that are easier to maneuver and faster in the water.
- 2. Chris wants to purchase high-quality materials.
- 3. He wants a logo that will be distinctive and recognizable.
- 4. He would like to implement efficient manufacturing processes that will enable him to quickly produce the boards when an order is placed.
- 5. He feels advertising is important.
- 6. Chris believes in customer satisfaction and wants to have courteous and efficient service for his customers. He also would like to develop a website to establish Internet customers.
- 7. Because Chris believes in customer service, he would like to provide a warranty service offering a free replacement if the customer is not
- 8. Chris will need to hire and train employees to make the boards.
- He will need legal advice when applying for a trademark and signing contracts.
- He wants a computerized accounting system that also provides customer information and the ability to develop management reports.
- a. Identify from the value chain the primary processes that add value to the surfboards.
- b. Identify the support services that are part of the same value chain.

**Answer** a. Research and development (Discussion item 1) Supply (2)

> Design (3) Production (4) Marketing (5) Distribution (6) Customer service (7)

b. Human resources (8) Legal services (9) Information systems (10) Management accounting (10)

**Question** What steps would a company using TQM take to improve product or service quality?

**Answer** The company would focus on improving quality by identifying and reducing or eliminating the waste of resources caused by poor quality. Emphasis would be placed on using resources efficiently and effectively to prevent poor quality and on examining current operations to spot possible causes of poor quality.

**Question** What would a company using an activity-based management approach attempt to do in regard to activities that add value to the product and those that do not?

Answer Companies employing the activity-based management approach would identify all major activities in the company as either value-adding activities or nonvalue-adding activities. Activities that add value would be enhanced to improve product quality. Activities that do not add value would be reduced or eliminated.

Question List three characteristics of a JIT operating environment.

Answer The just-in-time operating environment is characterized by the acquisition and use of raw materials only when needed, thus reducing inventories significantly. The elimination of wasted time and materials is emphasized. Workers are taught to be multiskilled. Products are produced continually, resulting in lower work in process inventories. Finished goods inventories are also reduced because production occurs only when orders have been received. Orders are shipped when completed.

Question A Taste of Italy is a pizza business that delivers only. A Taste of Italy's business objectives are as follows:

- 1. To be profitable and grow
- 2. To manage its food inventory carefully (especially the cheese!)
- 3. To provide fast and courteous service
- 4. To have repeat customers

The following performance measures were developed:

- 5. Average unsold food at the end of the business day as a percentage of the total purchased that day
- 6. Growth in revenues per quarter and profit margin
- 7. Average customer wait time between order and delivery
- 8. Percentage of customers who have ordered before (All customers are identified by phone number.)

Match each of the above business objectives and performance measures with the four perspectives of the balanced scorecard. (Identify by placing the number or numbers next to the perspective; each number can be used only once.)

a. Financial Perspective \_\_\_\_\_

b. Learning and Growth Perspective

c. Internal Business Processes Perspective \_\_\_\_\_\_
d. Customer Perspective \_\_\_\_\_

Answer

a. 1, 6

b. 4, 8

c. 2, 5 d. 3, 7

**Question** Mi Casa is a housekeeping company in Brownsville, Texas. The corporation is owned 100 percent by Jean Kline. Jean plans to develop the company into a multimillion-dollar company as the demand for housekeeping services in Brownsville is increasing at a rapid pace as the community grows.

Currently, Jean has three housekeepers who each work a 40-hour week. Over the past four weeks, the actual hours worked were as follows:

	Week 1	Week 2	Week 3	Week 4	Total
Housekeepers	136	140	145	145	566

Jean is concerned with the hours worked. Analyze the activity for the four weeks by preparing a table showing the estimated hours, actual hours, and the hours under (or over) estimate. Based on the information in your table, does Jean have reason for concern? If so, what could some of the possible reasons be for the hours spent?

## Answer

Week	Estimated Hours	Actual Hours	Hours Under (or Over) Estimate
1	120	136	(16)
2	120	140	(20)

3	120	145	(25)
4	120	145	(25)
Totals	480	566	(86)

Yes, Jean has reason for concern as the hours increased each week, amounting to a total of 86 hours over the estimated amount. Possible reasons could include the following:

The employees are new and still learning.

Jean underestimated how much time is really required to clean the houses.

The employees are doing more work than Jean contracted with the homeowner for.

One employee may be spending more time than the others due to illness or some other reason.

**Question** Accountants have ranked among the highest in ethics among business professions and other occupations. List and briefly describe five ethical standards that management accountants subscribe to that, in your opinion, help maintain the impression that accountants are highly ethical.

**Answer** The student should list any five of the following ethical standards:

Competence Standards:

Management accountants have a responsibility to

- 1. maintain an appropriate level of professional competence by participating in the ongoing development of their knowledge and skills.
- 2. perform their professional duties in accordance with relevant laws, regulations, and technical standards.
- 3. prepare complete and clear reports and recommendations after appropriate analysis of relevant and reliable information.

Confidentiality Standards:

Management accountants have a responsibility to

- 1. refrain from disclosing confidential information acquired in the course of their work except when authorized, unless legally obligated to do so.
- 2. inform subordinates as appropriate regarding the confidentiality of information acquired and to monitor their adherence to this
- 3. refrain from using or appearing to use confidential information acquired in the course of their work for unethical or illegal advantage personally or through third parties.

Integrity Standards:

Management accountants have a responsibility to

- 1. avoid actual or apparent conflicts of interest and advise all appropriate parties of any potential conflict.
- 2. refrain from engaging in any activity that would prejudice their ability to carry out their duties ethically.
- 3. refuse any gift, favor, or hospitality that would influence or would appear to influence their actions.
- 4. refrain from either actively or passively subverting the attainment of the organization's legitimate and ethical objectives.
- 5. recognize and communicate professional limitations or other constraints that would preclude responsible judgment or successful performance of an activity.
- 6. communicate unfavorable as well as favorable information and professional judgments or opinions.
- 7. refrain from engaging in or supporting any activity that would discredit the profession.

Objectivity Standards:

Management accountants have a responsibility to

- 1. communicate information fairly and objectively.
- 2. disclose fully all relevant information that could reasonably be expected to influence an intended user's understanding of the reports, comments, and recommendations presented.

**Question** Suppose a management accountant becomes aware of a confidential but illegal act that has occurred within her company. The management accountant must consider what she is ethically bound to do about this situation. Three alternative responses to this situation are given below. State whether you agree or disagree with each, and briefly detail your reasons.

- a. The accountant must remain loyal to the company at all times and should report the occurrence only to appropriate officials within the company.
- b. The accountant is bound to inform officials only if she stands to personally gain (make money) from knowledge of the illegal act.
- c. The accountant must exercise personal judgment; a clear-cut answer does not exist given the limited information provided.
- Answer a. The confidentiality standards state that management accountants must refrain from disclosing confidential information acquired in the course of their work except when authorized, unless legally obligated to do so. As such, the student should recognize that illegal acts can be an exception to the confidentiality standard. The severity and nature of the illegal act may dictate the accountant's obligation to disclose knowledge of this act to outside officials. An example would be an act involving a felony. Although the thrust of the confidentiality standard encourages accountants to remain loyal to their company in refraining from communicating confidential information, failure to disclose knowledge of illegal acts to outside authorities may result in their being charged as an accessory to the crime. Discussing the illegal act with officials inside the company would likely be the minimum amount of communication required.
  - b. The confidentiality standards specifically state that management accountants should refrain from using or appearing to use confidential information acquired in the course of their work for unethical or illegal advantage either personally or through third parties. As such, if an accountant could stand to personal gain from knowledge of the illegal act, then refraining from communicating this information may give the appearance that the accountant is obtaining illegal profits from this information. Depending on the severity of the illegal act, the accountant should communicate knowledge of this act to officials inside or outside the company to avoid even the appearance of unethical behavior.
  - c. As noted in parts a and b, the appropriate action dictated by this situation involves consideration of the severity and consequences of the illegal act. The severity and nature of the illegal act may dictate the accountant's obligation to disclose knowledge of this act to outside officials. In all likelihood, the required procedure should at a minimum include discussing the knowledge of this act with company officials.

Question 126 Essay 0 points Remove

**Question** Assume you are the president of the business club at your school. You are thinking about creating a fundraising project to generate money for next year's operations. Develop an outline of your ideas using the various stages of the management process.

**Answer** Note: Student answers will vary considerably; however, they should adequately cover the four stages of the management process. An example answer is given below.

Plan: Under strategic planning you need to define the objective, i.e., how much needs to be raised. In addition, the target market needs to be identified—for example, students, faculty, businesses, or the community at large. The operating plan would then specify how to approach the target markets.

Perform: This would involve explaining the plan to the membership, getting volunteers to help, and performing the actual work, such as coordinating the mailings, staffing the donation booths, making phone calls, and visiting potential donors.

Evaluate: This would involve comparing actual performance to expected performance on a daily basis and making adjustments as needed.

Communicate: This would involve preparing and presenting a report on the results achieved to the membership.

**Question** The Chief Financial Officer (CFO) of your company has asked you to help her develop a cost control report to be distributed within the company. She wants your input concerning what she should think about before developing such a report. Discuss the significant points, in detail, the CFO should consider before the cost control report is prepared.

**Answer** In addition to identifying the Why, Who, What, and When of the report, students should address the specific points that need to be considered under each topic.

Why: What is the purpose of the report? Is the intent to report on total costs or is the report going to be concerned with specific costs? Are the costs being considered for the entire company or for specific segments of the company?

Who: Who is going to receive the report? Is it going to specific line managers or to someone higher up in the company or to both groups? In other words, is it going to individuals actually incurring the costs or to individuals that are just familiar with the costs being reported?

What: Can the information needed to prepare the report be obtained from existing source documents and other sources or not? How will the information be presented? As columnar data, as charts and graphs, as dollar amounts, as percentages, as year-to-date costs, as actual compared to budget, as actual this year compared to actual last year, or some other way?

When: How often will the report be prepared? Daily, weekly, monthly, quarterly, annually? Is the report going to be used to influence current operations or future operations?

**Question** Assume your club makes and sells boxes of chocolate every year as a fundraising project for Valentine's Day. As the current director of projects, you are interested in improving the quality of the service and the product your club offers. You have just learned about continuous improvement. Discuss how your club could use JIT, TQM, and ABM to achieve improved quality.

**Answer** *Note:* Student answers will vary considerably depending on their approach. However, each answer should indicate that the student has a grasp of what JIT, TQM, and ABM mean and how each would impact an organization's attempt to achieve continuous improvement. A sample answer is given below.

JIT could be used to reduce unused inventories of chocolate, by preparing the candy only when an order is received. Wasted raw materials could be reduced by keeping them in coolers until used.

TQM could be used to ensure that the best product/service combination is offered. This could include deciding whether it is better to take special orders and deliver the boxes or to have them picked up by the customer.

ABM would include identifying what activities add value to your product/service package—for example, ordering, production, and delivery. Is it more valuable if customers can order the boxes of candy decorated for gift-giving or let them do the wrapping?

**Question** The fathers of the balanced scorecard, Drs. Kaplan & Norton, introduced four generic perspectives from which to view a business. Consider the following four questions and briefly describe the generic perspective that relates to the question and why.

- 1. How should we present ourselves to our investors and owners to be considered by them as a financial success and an attractive investment?
- 2. What do we have to offer our customers related to our product, customer intimacy, and operational excellence?
- 3. In what activities must we excel to be able to accomplish our financial and customer-oriented objectives?
- 4. What do we need to change in our infrastructure to achieve number 3?

**Answer** 1. Financial Perspective: Investors and owners need and want to know how the company is doing financially to affirm their decision to invest in the company. Revenue growth and productivity increases both assist in profit maximizing which increases shareholder (owner) value.

- 2. Customer Perspective: This perspective is the most important because it facilitates the funding of all other perspectives, unless your funding is from other sources (taxpayers, grants, etc.). If you don't keep your customers happy, you won't be able to sell your products or services and will not make money. Without money, you will not be able to satisfy the wants and needs of your owners, investors, creditors, employees, or anyone else.
- 3. Internal Business Processes Perspective: This represents the activities a company must focus on in order to satisfy the customer perspective and financial perspective. Delivering promptly and keeping complaints to a minimum are examples.
- 4. Learning and Growth Perspective: You must determine how to use your assets wisely and train your employees to enable the company to grow. This perspective is essential in order to meet the demands of the other three perspectives.

Modify Remove

**Question** The Assembly Department of KEIA employs three direct laborers and two supervisory personnel. For the past several months, the employees have been assembling desks from pieces prepared in the Cutting Department. Three desks are expected to be produced for every labor hour incurred in the department. The hours worked in April, May, and June appear below.

April		Мау		June		
Employee	Direct Labor	Supervisory	Direct Labor	Supervisory	Direct Labor	Supervisory
M. Jackson		178		180		185
J. Taylor	172		182		178	
C. Dion	182		178		190	

B. Dylan	188		176		184	
J. Baez		167		188		195

Actual production of desks for April was 2,501; May, 2,532; and June, 2,601.

- a. Calculate the number of desks expected to be produced each month.
- b. By what percentage did production fall short of expectations each month?
- c. Comment on your calculations, and recommend what actions should be taken by the plant manager.

Answer a. Calculation of expected production:

	A	April		Мау	June		
Employee	Direct Labor	Supervisory	Direct Labor	Supervisory	Direct Labor	Supervisory	
M. Jackson		178		180		185	
J. Taylor	172		182		178		
C. Dion	182		178		190		
B. Dylan	188		176		184		
J. Baez		<u>167</u>		<u>188</u>		<u>195</u>	
Total	<u>542</u>	+ <u>345</u>	<u>536</u>	+ <u>368</u>	<u>552</u>	+ 380	
Total Hours	887		904		932		
Desks/Hour	<u>3</u>		<u>3</u>		´ <u>3</u>		
Units Expected	2,661		2,712		2,796		

b. Calculation of percentage actual production fell short of expectation:

Units Expected Units Produced	2,661 2,501	2,712 2,532	2,796 <u>2,601</u>
Shortfall	160	180	<u>195</u>
	$\frac{160}{2,661} = 6.01\%$	$\frac{180}{2,712} = 6.64\%$	$\frac{195}{2,796} = 6.97\%$

c. As the data reveal, production efficiency has fallen off by an increasing amount for each of the past three months. The plant manager must take actions to halt or reverse this trend. Recommendations may be to discuss the data with the department supervisor. An analysis should be done to determine if it is the direct laborers or the supervisory personnel who cause most of the inefficiency. The manager also must keep in mind that the Assembly Department workers may be receiving materials that are not prepared by the Cutting Department as precisely as necessary, causing a slowdown in the assembly process.

**Question** Carlson Manufacturing is a producer of plastic bottles for bottled water companies. In July of this year, the plant manager switched to a new supplier of raw materials. The materials have a lower cost, and because of their chemical composition, more bottles can be made per hour. The downside of this faster production is that more bad, unusable bottles result. Below are the production data for the two months before and after the switch of suppliers.

	M	May		June		July		August	
	Good	Bad	Good	Bad	Good	Bad	Good	Bad	
Machine 1	21,014	1,116	20,560	1,182	22,584	1,564	23,651	1,622	
Machine 2	19,876	1,220	19,614	1,202	22,108	1,605	23,615	1,638	
Machine 3	19,912	1,204	20,811	951	22,916	1,477	23,918	1,714	

- a. Compute bad units as a percentage of total production for each month. Round answers to two decimal places.
- b. What does the plant manager need to consider in determining whether or not to continue buying raw material from the new supplier? **Answer** a. Computation of bad bottles as a percentage of total output:

	M	May		June		July		August	
	Good	Bad	Good	Bad	Good	Bad	Good	Bad	
Machine 1	21,014	1,116	20,560	1,182	22,584	1,564	23,651	1,622	
Machine 2	19,876	1,220	19,614	1,202	22,108	1,605	23,615	1,638	
Machine 3	19,912	<u>1,204</u>	20,811	951	22,916	<u>1,477</u>	23,918	<u>1,714</u>	
	60,802	3,540	60,985	3,335	67,608	4,646	71,184	4,974	
Percentages	3,540	3,540		3,335		4,646		4,974	
	60,802 + 3,5	60,802 + 3,540		60,985 + 3,335		67,608 + 4,646		71,184 + 4,974	
	= 5.50%	= 5.50%		= 5.19%		= 6.43%		= 6.53%	

b. The plant manager must decide if the increase in bad output is worth the increase in production of good bottles. Analysis must be performed on the increase in good output and what it adds to profit each month. These amounts will be offset by the added costs of using more time and materials in the production of unusable bottles. Even though bad output has increased, it still may be cost-effective to go with the new raw materials.
