## Stainless steel tube solutions

Centravis production plant is one of the largest mills in Europe specialised in the production of seamless stainless steel tubes and pipes. Modern plant equipment and broad experience allows us to provide an extensive product portfolio for customers with the most demanding requirements.

Centravis seamless stainless steel solutions are frequently used in a wide range of corrosive media and high temperatures in chemical and petrochemical industries, nuclear and thermal power engineering, non-ferrous metallurgy, machine and shipbuilding, food and other industries, covering a great variety of tube segments.

Centravis strives for excellence – both in products and services. In order to meet the expectations of our customers and to increase the level of customer satisfaction, the company can deliver according to individual specifications

and additional requirements. Parameters such as the use of special instruments, additional finishing after rolling, different methods of testing and tube examination, heat treatment, polishing, individual packaging and many other features can be adapted in the production plant.

Centravis' portfolio covers various steel grades, austenitic, ferritic, austenitic-ferritic classes, duplex, super duplex, Ni-alloys tubes and a dimensional range from 4 – 245 mm with wall thickness of 0.2 – 35 mm and a maximum tube length of 25 metres.

### Tube segments:

- General tubes and pipes
- Boiler tubes
- Heat-exchanger tubing
- Instrumentation tubing
- Furnace tubes
- Hollow bars
- Ni-alloys

### Target Industries:

- Chemical and petrochemical
- Nuclear and thermal power engineering
- Non-ferrous metallurgy
- Machine and shipbuilding
- Automotive and aerospace
