### Dimensional-weight Pricing Calculation

Dimensional-weight pricing is applicable on a per-shipment basis to all shipments in customer packaging. FedEx packaging may also be subject to dimensional-weight pricing. If the dimensional weight exceeds the actual weight, charges may be assessed based on the dimensional weight.

#### HOW TO CALCULATE THE DIM WEIGHT FACTOR

1. Measure the Length\*\*, Width and Height of your package in centimeters.
2. Calculate the volume and divide it by 6,000 to get the dimensional weight in kilograms. Round off fractions to the next whole number.
3. If the dimensional weight is greater than the package's actual weight, use the dimensional weight to calculate your rate.

$$\text{Dim Weight Factor} = \frac{L \times W \times H}{6,000} = \text{Kilograms}$$

\*\* Length is defined as the longest side of the object or package. Girth is calculated as twice the width plus twice the height of the object or package.

Dangerous Goods and Perishables are prohibited for transport via FedEx Express Nacional.

FedEx reserves the right to amend or change the applicable services and costs at any time. Other additional fees may apply. Please contact FedEx Customer Service at 01800-900-11-00 for more information.

Please visit [fedex.com/mx](http://fedex.com/mx) for detailed information of applicable surcharges.
