Fujitsu Technology Solutions, Inc. Announces "DESTINATION SOLARIS" Program

Fujitsu Technology Solutions, Inc. migrates customers from System/390 to the Solaris platform with a single point of accountability

(Sunnyvale, CA), March 12, 2002 ⸺ Fujitsu Technology Solutions, Inc., a strategic member of the Fujitsu Group companies, today announced a new initiative called "Destination Solaris," which enables customers to migrate enterprise applications from the System/390® operating environment to the Sun Microsystems™ Solaris™ platform, with a single point of accountability for every element of the migration process.

Legacy migration is one of the largest and most complex challenges facing IT executives. "Destination Solaris" coordinates every element of migration on behalf of the customer, using expertise from Fujitsu Technology Solutions, Inc., Sun Microsystems and Relativity Technologies. Fujitsu Technology Solutions, Inc. will provide overall program management from project inception through deployment and operation.

With the move of strategic application deployment from the legacy System/390 environment to the improved functionality and reduced costs of Open Systems, many customers are faced with the challenge of migrating existing mission critical applications to this new open environment. This challenge is intensified by a scarcity of resources experienced in System/390 systems and in managing large-scale application and platform migrations.

Ken Mason, Fujitsu Technology Solutions, Inc., Vice President of Marketing and Business Development comments, "Our customers have told us that migration is one of their biggest headaches. Through 'Destination Solaris,' we aim to make it simple. Fujitsu Technology Solutions, Inc. has more than 30 years experience in the System/390 and UNIX markets and has worked together with Sun Microsystems to solve high end data center challenges since 1991. In fact, we are one of the largest integrators of Sun's high-end servers on a global basis. Bringing together the expertise of Sun and Fujitsu Technology Solutions, Inc. provides customers with unparalleled migration expertise."

"Destination Solaris" will address four key migration requirements:

- offload, re-host or migrate existing legacy IT applications;
- consolidate IT equipment where appropriate;
- provide enterprise systems management equivalent to the mainframe environment;
- optimize the customer's overall investment in IT

"This alliance will show that Solaris and the SunFire products it runs on are the best alternative to System/390," said Gary Grimes, Vice President of Partners for Sun Microsystems. "Sun is excited to work with Fujitsu Technology Solutions, Inc. on the 'Destination Solaris' program, and to continue to expand our thought-leadership in the enterprise data center."

_____

Ken Mason concludes, "Through discussions with our customers and partners we already are talking with more than 60 companies interested in moving applications from System/390 to Solaris. These span all of the major industries and markets we serve. Fujitsu Technology Solutions, Inc. and Sun are offering customers a vision of the data center of the future, as well as a practical and cost effective way to create it."
