

What the reviewers say about . . .

THE PRACTICAL APPROACH SERIES

Books in the Practical Approach series encompass a wide range of essential techniques for the front line of bioscience research. They share a common guiding principle and the same pragmatic standard: how to explain, with clarity and verve, today's important methods in biochemistry, cellular and molecular biology and biotechnology. Here is what the reviewers have said . . .

DNA Cloning (Volumes I and II)

D M Glover

Imperial College of Science and Technology, London

'These two volumes are a strong addition to the IRL Press Practical Approach series. They are essentially cookery books that should be found in the laboratory, as well as the library - they may well merit occasional monitoring with a Geiger counter. Their popularity has already been clearly demonstrated by the annoying tendency of the review copies to disappear from my desk and resurface a few days later in other laboratories scattered around the building.'

Nature

1985; Volumes I and II: 0 947946 20 9, US\$45 00/£25 00

Volume I 204pp, 0 947946 18 7, US\$25 00/£14 00 (soft)

Volume II 260pp, 0 947946 19 5, US\$25 00/£14 00 (soft)

Oligonucleotide Synthesis

M J Gait,

MRC Laboratory of Molecular Biology, Cambridge

'Anyone currently struggling to put together a grant justification for an all-singing, all-dancing DNA synthesizer, would do well to obtain a copy of this book without delay . . . The book is so comprehensive a guide to the black art of DNA synthesis that even a severely abbreviated list of topics would run to several pages - the book is commendably error-free, and should prove indispensable . . .'

Bio/Technology

' . . . reads like the voice of an expert, looking over one's shoulder in the lab and offering words of encouragement '

TIBS

1984, 232pp, 0 904147 74 6, US\$23 00/£13 00 (soft)

Affinity Chromatography

P D G Dean, Agricultural Genetics Co, W S Johnson,

University of Liverpool, and F A Middle, P & S Biochemicals

'The editors are to be congratulated in producing such a useful volume without going in for over-kill. The attractive format should make the book welcome in all laboratories where this technique is being used '

Society for General Microbiology Quarterly

' . . . a mine of useful information . . .'

TIBS

1985; 232pp, 0 904147 71 1, US\$23 00/£13 00 (soft)

Instructions to authors

Scope and policy of *Carcinogenesis*

Carcinogenesis is a multi-disciplinary journal designed to bring together all the varied aspects of research which will ultimately lead to the prevention of cancer in man. The journal will publish full papers and short communications which warrant prompt publication in the areas of viral, physical and chemical carcinogenesis and mutagenesis; factors modifying these processes such as DNA repair, genetics and nutrition; metabolism of carcinogens; the mechanism of action of carcinogenesis and promoting agents; epidemiological studies; and the formation, detection, identification and quantification of environmental carcinogens. The editors may, from time to time, invite commentaries or short reviews.

Submission of manuscripts

The manuscript (the original and two copies) should be submitted directly to the appropriate executive editor.

For *The Americas*: Dr A. Dipple and Dr C.C. Harris, *Carcinogenesis* Editorial Office, NCI-FCRF, PO Box B, Frederick, MD 21701, USA.

For *Europe, Japan and the Rest of the World*: Dr R.C. Garner, *Carcinogenesis* Editorial Office, University Road, Heslington, York YO1 5DU, UK.

Submission of a paper implies that it reports unpublished work and that it is not under consideration for publication elsewhere. If previously published tables, illustrations or more than 200 words of text are to be included, then the copyright holder's written permission must be obtained. Enclose copies of any such permission letters with your paper.

Proofs

Authors will be sent page proofs. To avoid delays in publication, proofs should be checked immediately for typographical errors and returned to the publishers by express (special delivery) post. Alternatively, to save time corrections may be given by telephone to IRL Press, telephone number (0865) 882283. Essential changes of an extensive nature may be made only by insertion of a Note Added in Proof. A charge will be made to authors who insist on amendment within the text at the page-proof stage.

Preparation of manuscripts

Manuscripts should be in their final form when they are submitted so that proofs will require only correction of typographical errors.

Sections of the manuscript

Regular full-length papers should be subdivided into the following sequence of sections: Title page, Abstract, Introduction, Materials and methods, Results, Discussion, Acknowledgements, References, Tables, Legends to Figures. In the journal the Materials and methods, Acknowledgements and References will be printed in smaller type to accommodate more text. Short Communications (defined as complete pieces of work which do not justify full-length papers) should not exceed 2000 words in length excluding references and figures. Do not divide communications into headed sections, but present the methods, results and discussion in a single section. Include a short abstract and present the acknowledgements and references as in full-length papers.

General format

Manuscripts should be legibly typed on A4 or American quarto paper. All sections of the manuscript must be double-spaced (space between the lines of type not less than 6 mm). Margins of 25 mm (1 inch) should be left at the sides, top and bottom of each page. Number each page top right (Title Page is 1). Please avoid footnotes; use instead, and as sparingly as possible, parenthesis within brackets. Underline only words or letters to appear in italics. Clearly identify unusual or handwritten symbols and Greek letters. Differentiate between the letter O and zero, and the letters I and l and number 1. Mark the position of each figure and table in the margin.

Abstract

The second page of every manuscript must contain only the Abstract, which should be a single paragraph not exceeding 300 words. Please abide strictly by this limitation of length. The Abstract should be comprehensible to readers *before* they have read the paper, and abbreviations and reference citations should be avoided.

Acknowledgements

These should be included at the end of the text and not in footnotes. Personal acknowledgements should precede those of institutions or agencies.

References

Authors are responsible for the accuracy of the References. Published articles and those in the press (state the journal which has accepted them) may be included. Arrange references in numerical order with the numbers in the text in brackets and on the line (not as superscripts). Note that all authors' names should be mentioned and the initials follow the name; the date should precede the title; the title should be given in full; the name of the journal should be abbreviated according to the *International List of Periodical Title Word Abbreviations* and underlined to indicate italics. References should therefore be listed as follows:

1. Terzaghi, M. and Nettesheim, P. (1979) Dynamics of neoplastic development in carcinogen-exposed tracheal mucosa. *Cancer Res.*, **39**, 4003–4010.
2. Wattenberg, L.W. (1978) Inhibitors of chemical carcinogenesis. In Klein, C. and Weinhouse, S. (eds), *Advances in Cancer Research*. Academic Press, London, Vol. 26, pp. 197–226.
3. Foulds, L. (1969) *Neoplastic Development*, Vol. 1. Academic Press, New York.

Personal communications (J. Smith, personal communication) should be authorized by those involved, in writing, and unpublished data should be cited as (unpublished data). Both should be used as sparingly as possible and only when the unpublished data referred to is peripheral rather than central to the discussion. References to manuscripts in preparation, or submitted but not yet accepted, should be cited in the text as (B. Smith and N. Jones, in preparation) and should NOT be included in the list of references.

Tables

Tables should be typed on separate sheets, and numbered consecutively with Roman numerals. Tables should be self-explanatory and include a brief descriptive title. Footnotes to tables indicated by lower case letters are acceptable, but they should not include extensive experimental detail. An arrow in the text margin should be used to indicate where a table should be inserted in the text.

Illustrations

All illustrations (line drawings and photographs) should be referred to in the text as Figure 1 etc., which should be abbreviated to 'Fig. 1.' only in the figure legend. Write the title of your paper, the name of the first author and the figure number lightly in blue pencil on the back of each figure. On the back also indicate clearly the top margin of each figure. On the manuscript indicate with an arrow in the margin the most appropriate position for the figure.

Photographs. These must be submitted in the desired final size so that reduction can be avoided. The type area of a page is 248 (height) × 185 mm (width) and photographs, including their legends, must not exceed this area. A single column is 88 mm wide. A double column is 185 mm wide. Ideally, photographs should fit either a single column or a double column. Photographs should be of sufficiently high quality with respect to detail, contrast and fineness of grain to withstand the inevitable loss of contrast and detail inherent in the printing process. Please indicate the magnification by a rule on the photographs.

Colour plates. Inclusion of colour plates will be subject to a special charge.

Line drawings. Please provide these as clear, sharp prints, suitable for reproduction as submitted. No additional artwork, redrawing or typesetting will be done. Therefore, all labelling should preferably be made with a lettering set. Ensure that the size of lettering is in proportion with the overall dimensions of the drawing. Ideally, line drawings should be submitted in the desired final size to avoid reduction (maximum dimensions 248 × 185 mm including legends) and should fit either a single (88 mm) or a double column width (185 mm). If submitting line drawings which require reduction, please check that the lettering will be clearly legible after the drawing has been reduced to the size at which it will be printed. After reduction, letters should not be smaller than 1.5 mm in height.

Figure legends. These should be on a separate, numbered manuscript sheet. Define all symbols and abbreviations used in the figure. Common abbreviations and others in the preceding text should not be redefined in the legend.

Conventions

In general, the journal follows the conventions of the *Committee of Biological Editors Style Manual* (5th edn, 1983).

Follow *Chemical Abstracts* and its indexes for chemical names. For guidance in the use of biochemical terminology follow the recommendations issued by the IUPAC-IUB Commission on Biochemical Nomenclature, as given in *Biochemical Nomenclature and Related Documents*, published by the Biochemical Society, UK. For enzymes, use the recommended name assigned by the IUPAC-IUB Commission on Biochemical Nomenclature, 1978, as given in *Enzyme Nomenclature*, published by Academic Press, New York, 1980. Where possible, use the recommended SI (Système International) units.

Genotypes should be italicized (underline in typed copy); phenotypes should not be italicized. For bacterial genetics nomenclature follow Demerec *et al.* (1966) *Genetics*, **54**, 61–76.

Abbreviations

Try to restrict the use of abbreviations to SI symbols and those recommended by the IUPAC. Abbreviations should be defined in brackets after their first mention in the text. Standard units of measurements and chemical symbols of elements may be used without definition in the body of the paper.

Reprints

The publishers supply 30 reprints free of charge. Reprint order forms are sent out with the proofs, and must be returned with the proofs to IRL Press if extra reprints are required. Late orders submitted after the journal is printed are subject to increased prices.
