T3EL25 Fixed Anti-tip Bar / Quick Release Swivel Caster

(fixed axle only)300.00

Invacare® Top End® T-3™ Tennis Elite W heelchair

Measuring Guidelines

Seat Width - Measure frame outside to outside in 1" increments. Available from 12" to 19" wide.

Tapered Seat - Measure frame width desired at back post to 10" deep and then front at edge of seat upholstery. Maximum difference is 4".

Seat Depth - Measured by the length of upholstery from the front of the seat sling to the back post. Standard is 15" - but is available from 12" to 16".

Seat Rail Extensions - Fixed. Standard length is 3" and is measured from the edge of the seat upholstery.

Seat Height Front / Rear - Floor to top of tube in the front and rear respectively, front range is 17" - 21", rear 13" - 17". Most daily used chairs have a 1" - 3" difference. Tennis players use 4" - 6" difference between front and rear. High level injuries prefer more drop in the seat and lower injuries less. The drop adds balance, security in the seat and better positioning for high injuries. This is very evident in all contact sports such as quad rugby and basketball.

Adjustable Rear Seat Height - An optional 13.5" - 17" adjustable rear seat is available for those who are unsure.

Backrest Height - Ranges from 8" to 16". The back is fixed and it can be made to the exact height or any adjustable range of 11" - 14", 14" - 18" or 16" - 20".

W heelbase - Standard for Tennis is 24". 24" is recommended as a minimum for tennis players who sit above 16" in the rear and for those needing stability, extra leg room and for daily use. The wheelbase is measured from the center of the axle to the center of the front fork. To measure the wheelbase on an adjustable axle position T-3, the axle should be 3" from the front of the back post.

Axle Position - Available as fixed w/ fixed camber at 12°, 15°, or 20° for elite players. Only one camber is available w/ fixed axle choice or pick. The fixed axle is measured from the front of the back post to center of axle. Minor adjustments can be made w/ adjustable back upholstery and foot placement.

Adjustable Axle Position Camber Tube - The best choice for most players, especially beginners or intermediate players who may want to change their axle position as their skills improve. Camber is available in 12°, 15° or 20°. An additional tube is available in camber from 0° - 20°.

Footrest - The footplate system is adjustable both forward and backwards. The dual footplates are multi-adjustable and also can be angled for full foot contact and comfort. Toe strap is standard. Toe-clip cage is available as an option.

Frame W heel Clearance - 1" for fixed axle and adjustable w/ adjustable axle camber tube.

Rear W heels - Standard size is 24" (25 - 540). For short players or children, the 22" (25 - 520) wheel is a good choice. The 25" (25 - 559) wheel is good for taller players who want to "push more wheel". Double wall rim and high flange hubs are standard which are great for sports enthusiasts. High pressure tires are standard but threaded tires and KIK tires are also available.

Front Caster - For court sports, the 3" in-line wheel is preferred. 5" is available for daily use.

Options - Sport and everyday options are available.

Color Selection - See Color Selection Guide for details.
