General Prior Authorization Information

The following pages 4-7 include information about prior authorization taken from the DMAP Pharmaceutical Services Supplemental Information document found at:

http://www.dhs.state.or.us/policy/healthplan/guides/pharmacy/main.html

Overview

For drugs that require prior authorization (PA) on Point-of-Sale (POS) claims:

- A new evaluation feature of the Oregon DHS POS system, DUR Plus, reviews incoming POS claims and issues PA when the drug meets appropriate clinical criteria.
- For drugs that do not pass DUR Plus review, pharmacies must contact the prescribing provider, who then requests PA from the Oregon Pharmacy Call Center.

Drugs requiring PA

DHS may require PA for individual drugs and categories of drugs to ensure that the drugs prescribed are indicated for conditions funded by the Oregon Health Plan (OHP) and consistent with the Prioritized List of Health Services and its corresponding treatment guidelines (see OAR 410-141-0480 and 0520).

Administrative rule 410-121-0040 is related to drugs requiring prior authorization for Medically Appropriate Use.

For information regarding drugs requiring prior authorization, please refer to the Pharmacy Web site at: www.dhs.state.or.us/policy/healthplan/guides/pharmacy/main.html.

DUR Plus review

The Oregon DHS POS system initially evaluates incoming pharmacy claims for basic edits and audits. If the drug on the claim requires prior authorization (PA) and requires DUR Plus evaluation, the claim passes through a series of clinical criteria rules to determine whether DUR Plus can issue PA and allow dispensing the drug to the client.
DUR Plus checks the current drug claim as well as the client's medical and claims history for the appropriate criteria.

- If suitable criteria are found, a prior authorization will be systematically created, applied to the claim, and the claim will be paid. This interactive process occurs with no processing delays and no administrative work for the pharmacy or prescribing provider.
- If all criteria are not met, the claim will be denied and PA will be required. The prescriber will be responsible for requesting PA, using procedures outlined in OAR 410-121-0060.

Oregon Pharmacy Call Center review

The Oregon Pharmacy Call Center is available 24 hours per day, seven days a week, 365 days a year.

Phone: 888-202-2126
Fax: 888-346-0178

The Call Center receives calls and faxes related to PA requests for fee-for-service prescriptions (including Mental Health "carve-out" prescriptions for managed care clients), and processes PA requests within 24 hours.

Prescribers should use PA procedures outlined in OAR 410-121-0060. For more information, refer to the Pharmacy Web page at www.dhs.state.or.us/policy/healthplan/guides/pharmacy/main.html.

See the Pharmaceutical Services Program Supplemental Information Forms section for forms prescribers should use when submitting PA requests to the Call Center.

Emergency PA protocol

The Oregon Pharmacy Call Center may authorize up to a 96 hour emergency supply. Refer to 410-121-0060(4) Emergency Need:

> The Pharmacist may request an emergent or urgent dispensing from the Pharmacy Call Center when the client is eligible for covered fee-for-service drug prescriptions.
>
> (a) Clients who do not have a PA pending may receive an emergency dispensing for a 96-hour supply.
>
> (b) Clients who do have a PA pending may receive an emergency dispensing up to a seven-day supply.

Client hearings and exception requests

For any PA requests that are denied due to DMAP criteria not being met, the right of a client to request a contested case hearing is otherwise provided by statute or rule, including OAR 410-141-0264(10).

This rule describes when a client may request a state hearing. Clients may request a hearing based upon information included in the PA denial notice.

Information on how to file an appeal is attached to all PA notices to clients and providers from the Oregon Pharmacy Call Center.

Providers may contact Provider Services at 800-336-6016 to file an exception request on a PA denial. For information regarding OAR 410-120-1860, refer to the General rules Rulebook at www.dhs.state.or.us/policy/healthplan/guides/genrules/main.html.

Analgesics, Non-Steroidal, Anti-Inflammatory Drugs

Goal(s): To ensure that non-preferred NSAIDs are used for above the line conditions and restrict ketorolac to short-term use (5 days every 60 days) per the FDA black boxed warning:

> **WARNING** - Ketorolac is indicated for the short-term (up to 5 days) management of moderately severe acute pain that requires analgesia at the opioid level. It is not indicated for minor or chronic painful conditions. Ketorolac is a potent NSAID analgesic, and its administration carries many risks. The resulting NSAID-related adverse events can be serious in certain patients for whom ketorolac is indicated, especially when the drug is used inappropriately. Increasing the dose beyond the label recommendations will not provide better efficacy but will result in increasing the risk of developing serious adverse events.

Initiative: NSAID PDL & Ketorolac Quantity Limit

Length of Authorization: Up to 1 year.

Preferred Alternatives: Listed at: http://www.oregon.gov/DHS/healthplan/tools_prov/pdl.shtml

Requires PA: Non-preferred NSAIDs
Ketoralac: Maximum of one claim per 60 days. That claim can be a maxiumum of 20 tablets / 5 days, i.e. there is a 5 day maximum per 60 days.

Central Nervous System (CNS) – Stimulants

Goal(s):

- *Cover stimulants only for OHP covered diagnoses (e.g. ADHD, narcolepsy).*
- *Restrict to doses supported by medical literature and promote preferred drugs in class.*
- *The long-term effects of stimulants are unknown. Adverse events are more frequently associated with high doses. However, effectiveness is not linearly associated with dose and promote preferred drugs in class.*

Length of Authorization: 1 month, 2 month or 1 year, (criteria specific)

Check the reason for PA request:

- *Non-Preferred drugs will deny on initiation.*
- *Preferred drugs will deny only when maximum dose is exceeded.*
- *When a PA is entered, clients are locked into the per day quantity we enter in our PA. If the dose is increased, claims will reject for "plan limitations". If that happens and the client is still meeting criteria, then end the old PA and enter a new one with the updated directions.*

Preferred Alternatives: *Listed at:* http://www.oregon.gov/DHS/healthplan/tools_prov/pdl.shtml

PA does NOT concern drugs in STC 07 or 11, however, these drugs are not to be encouraged. The State is prohibited from prior authorizing Class 11 drugs by statute. These include:

4. Is drug requested preferred?	**Yes:** Go to #7.	**No:** Go to #5.
5. Is this continuation of therapy (claim indicating prescription filled within prior 90 days)**?**	**Yes:** Document prior prescription drug & date in PA record. Go to #7.	**No:** Go to #6.
6. Will the prescriber consider a change to a preferred product?	**Yes:** Inform provider of covered alternatives in	**No:** Go to #7.

Message: • Preferred products do not require PA for FDA approved doses. • Preferred products are evidence-based reviewed for comparative effectiveness & safety by the Health Resources Commission (HRC). Consider switching to an alternative stimulant drug class or assessing compliance with the current therapy.	**No:** Approve for up to 1 year.

Additional Criteria for Pharmacists:

If a client does not meet criteria and has been established on high doses (long term use), then:

1. A 1-month PA may be entered to allow time for the provider to collect the necessary information (i.e. patient's weight).
2. A 2-month PA may be entered to allow the physician to taper the patient down to acceptable doses.

Fentanyl Transmucosal and Buccal

The purpose of this prior authorization policy is to ensure that Actiq/Fentora/Onsolis is appropriately prescribed in accordance to FDA black box warning:

- *"Actiq/Fentora/Onsolis is indicated only for the management of breakthrough cancer pain in clients with malignancies who are already receiving and who are tolerant to opioid therapy for their underlying persistent cancer pain.*
- *Clients considered opioid tolerant are those who are taking at least 60 mg morphine/day, 50 mcg transdermal fentanyl/hour, or an equianalgesic dose of another opioid for a week or longer.*
- *Because life-threatening hypoventilation could occur at any dose in clients not taking chronic opiates, Actiq/Fentora/Onsolis is contraindicated in the management of acute or postoperative pain.*
- *This product must not be used in opioid non-tolerant clients. Actiq/Fentora/Onsolis is intended to be used only in the care of cancer clients and only by oncologists and pain specialists who are knowledgeable of and skilled in the use of Schedule II opioids to treat cancer pain.*
- *When prescribing do not convert patients from other fentanyl products on a mcg per mcg basis. Pharmacokinetic differences between products could cause fatal over dose.*
- *Caution should be used when combining Actiq/Fentora/Onsolis with CYP3A4 inhibitors. Increases in fentanyl concentrations could cause fatal respiratory depression.*
- *Patients and their caregivers must be instructed that Actiq/Fentora/Onsolis contains a medicine in an amount which can be fatal to a child. Patients and their caregivers must be instructed to keep all units out of the reach of children and to discard opened units properly."*

Opioids - Methadone – High Dose Limit

Goal(s):

- *Ensure safe use of methadone.*
- *Approval for >100mg/day only after assessment of QTc risk factors by prescriber.*
- *Methadone has been associated with adverse cardiac effects as stated below in an excerpt of the FDA Black Box Warning:*

> *Cases of QT interval prolongation and serious arrhythmia (torsades de pointes) have been observed during treatment with methadone. Most cases involve patients being treated for pain with large, multiple daily doses of methadone, although cases have been reported in patients receiving doses commonly used for maintenance treatment of opioid addiction.*

Note: Approval for beyond quantity and duration limits requires approval from the medical director.

No: Deny; (Medical Appropriateness)

Treatment with pegylated interferon-ribarvirin does not meet medical necessity criteria because there is poor chance of achieving an SVR.

Clinical Notes:

- Serum transaminases: Up to 40 percent of clients with chronic hepatitis C have normal serum alanine aminotransferase (ALT) levels, even when tested on multiple occasions.

- RNA: Most clients with chronic hepatitis C have levels of HCV RNA (viral load) between 100,000 (10^5) and 10,000,000 (10^7) copies per ml. Expressed as IU, these averages are 50,000 to 5 million IU. Rates of response to a course of peginterferon-ribavirin are higher in clients with low levels of HCV RNA. There are several definitions of a "low level" of HCV RNA, but the usual definition is below 800,000 IU (~ 2 million copies) per ml.(5)

- Liver biopsy: Not necessary for diagnosis but helpful for grading the severity of disease and staging the degree of fibrosis and permanent architectural damage and for ruling out other causes of liver disease, such as alcoholic liver injury, nonalcoholic fatty liver disease, or iron overload.

Stage is indicative of fibrosis:			**Grade is indicative of necrosis:**	
Stage 0	No fibrosis			
Stage 1	Enlargement of the portal areas by fibrosis		Stage 1	None
Stage 2	Fibrosis extending out from the portal areas with rare bridges between portal areas		Stage 2	Mild
Stage 3	Fibrosis that link up portal and central areas of the liver		Stage 3	Moderate
Stage 4	Cirrhosis		Stage 4	Marked

The following are considered investigational and/or do not meet medical necessity criteria:

- ✓ Treatment of HBV or HCV in clinically decompensated cirrhosis
- ✓ Treatment of HCV or HBV in liver transplant recipients
- ✓ Re-treatment of HCV or HBV previous non-responders or relapsers
- ✓ Treatment of HCV or HBV > 48 weeks
- ✓ Treatment of advanced renal cell carcinoma
- ✓ Treatment of thrombocytopenia
- ✓ Treatment of human papilloma virus
- ✓ Treatment of multiple myeloma

Proton Pump Inhibitors (PPI)

Goal(s):

- *Promote PDL options.*
- *Restrict chronic use (>eight weeks) to patients who failed H2-antagonist, omeprazole, Aciphex, or Prilosec OTC therapy or who have severe disease, e.g. Barrett's, or Zollinger Ellison syndrome.*
- *Restrict BID use to patients with severe disease, H.pylori or pediatric patients.*

Length of Authorization: 2 weeks to lifetime (criteria specific)

Notes:

- *This is a "global" PA.*
- *If an active PA for a PPI already exists, then **any** PPI will pay.*
- *A new PA is required if the dosing schedule changes, e.g., an active PA for once daily dosing restricts the PPI to once a day.*
- *BID dosing requires a new PA, however, the strength of the dose could be increased without an additional PA, e.g, a change from 20 mg daily could be increased to 40 mg ONCE a day without an additional PA.*

Covered Alternatives without PA:

- ✓ All preferred drugs on PDL list: http://www.oregon.gov/DHS/healthplan/tools_prov/pdl.shtml
- ✓ Individual components for treatment of H.Pylori that are preferred products

Check the reason for the PA request: *Non-Preferred drugs will deny on initiation.*
