Music Store Invoice Template (Retail) Features and Facts

Music Store Invoice Template (Retail) was designed specially for music company or store. The printable form (the main invoicing form on the center of the Invoice Excel spreadsheet is same as the default sales invoice template included in Uniform Invoice Software, but there are also several special fields added for music store business.

The additional fields, which are not present in the default sales invoice template that is shipped with Uniform Invoice Software setup program, are placed outside the printable area (the area with white background color on the center of the invoicing form). This means that, the additional fields will not be printed if you issue the Print command in Microsoft Excel. These additional fields include: COMPOSER, INSTRUMENTATION, PUBLISHER, COMMENT, which are all added to the Excel invoice form as columns.

The additional fields are implemented as custom fields.

Uniform Invoice Software support custom fields or user-defined fields, which is a unique feature that allows you to add new fields to the backend database as well as to the invoice form. **Music Store Invoice Template (Retail)** uses custom fields to implement the features that are not available in the default sales invoice template. With the support for custom fields in the database, Uniform Invoice Software has the ability to manipulate the newly added fields in database, includes adding them to reports. With the support for custom fields in the Excel worksheet, Uniform Invoice Software has the ability to create the relationship between fields - for example, one field should be the sum of the other fields, or the value of one field should be calculated only when another field value equals a certain value.

The support for custom fields makes it possible for even an end user who does not know programming at all, could add new features to her/his invoicing creator such as **Music Store**

Invoice Template (Retail) without writing one line of programming code. For example, in this tax invoicing template named Mixed Tax Rates in an Invoice, we implement the support of mixed tax rates in the same invoice by using custom fields. The result of the customization is offered in two editions, as what we do to all the other templates available here on InvoicingTemplates.com, that are one freeware edition, and another edition that works only with Uniform Invoice Software installed.

The printable form, Music Store Invoice Template (Retail), is exactly same as the default sales invoice template. So to implement this Music Store Invoice Template (Retail) based on the sales invoice template, all you need to do is to add the 4 custom fields to the Invoice Body (InvBdy) and Product database tables, and then add the 4 columns with each column mapped to a field in the database tables.

Adding a custom field to the Invoice Body database table makes it possible to save the data on the invoice form to database when the "Save To DB" button is clicked. For example, adding the custom field "Product Type" to the Invoice Body database table allows save the type value on the invoice form, such as "General" or "Labor", to database when you save an invoice by clicking the "Save To DB" button. This feature is not supported in the freeware edition of **Music Store Invoice Template (Retail)**.

Adding a custom field to the Product table in the database makes it possible to save the field value to database along with the other data of a product. For example, adding the custom field "Product Type" to the Product database table allows you to save the type, such as "General" or "Labor", to the database when you save a product or item. If you use Uniform Invoice Software version template **Music Store Invoice Template (Retail)** and add the custom field to the invoice form, the value is retrieved whenever you pick up a product on creating an invoice.

In the original version of Uniform Invoice Software, which is named Excel Invoice Manager, adding custom fields to database tables should be done by using a standalone utility, which is called Database Designer. With Uniform Invoice Software, adding custom fields to database is much more easier. For example, to add the "Composer" field to the Product table, here are the steps to follow.

- Open the invoice template that you want to customize, and make sure it is connecting with the database you want to add new fields to.
- Click the Products button on the Invoice worksheet.
- Click the "Custom Fields" button on the toolbar. This opens the "Custom Fields" dialog box. The "Database Table" dropdown list box shows the database table currently you are working with. The "Custom Fields" grid shows all the custom fields defined for this database table.
- Click the "Add Field" button. This shows the "Add New Custom Field" dialog box. Here you specify the name, type, caption and size etc., for the new field. In this example, we specify the name of the new field as "composer", and the type as "text", the size as "100". This means that the text field will be able to hold up to 100 characters of text.
- 4. Click the OK button to alter the database table to add the new field.
- 5. Repeat the same steps 4-5 to add 3 other custom fields, INSTRUMENTATION, PUBLISHER and COMMENT.
- Once all the custom fields have been added to the Products table, we add these fields to the "Invoice Body" database table too.

When working with Uniform Invoice Software version of **Music Store Invoice Template (Retail)**, how does Uniform Invoice Software know to which cell when a field value write to when loading data from the database, and to which field a cell value must save when saving an invoice, a customer or a product item? That is, how does Uniform Invoice Software create the map or relationship between Excel cells on the template **Music Store Invoice Template (Retail)** and database fields? The answer is by using names. For example, if the field name in the Product table in a database is "ProductType", it is writing to a cell named "oknProductType_?" (where ? is

the line number of the invoicing item) when you pick up a product or item on creating an invoice, and when saving an invoice, all cells with the name "oknProductType_?" are saved to the "ProductType" field in the Invoice Body database table. By using cell names, Uniform Invoice Software allows you to move a cell on the form without breaking the feature depending on the field / cell. You can place the "Product Type" column either inside the printable area, which is printed when you issue the Print command in Excel or click the Print command on the Invoice form; or place the Product Type column outside the printable area, which will be included when you print or extract an invoice.

Music Store Invoice Template (Retail) is designed mainly for the retail business. If you are doing wholesale you may need a Discount field to appear on the invoice that you issue. See Music Store Invoice Template (Wholesale) for a free template that you can use. A PDF version of this template is also included for free.
