NEW Printable Double Layer

Now available to you are 'Double the Capacity' discs that not only offer you 8.5GB capacity, but also a printable surface so you can truly personalise your product.

As the market leader in high-quality printable media, the new 8.5GB discs feature an advanced inkjet-printable surface that provides remarkable ink absorption and excellent drying properties.

In addition to the Printable Double Layer product, we also have the industry's fastest Double Layer DVD product available in the form of 8x Double Layer media. This enables an entire 8.5GB disc to be filled to capacity in less than 15 minutes! Read more about this new media from the ['Verbatim testing 8.5GB DVD+R DL in under 15 minutes'](#) press release. We also manufacture Dual Layer DVD-R 4x product.

LightScribe DVD

LightScribe technology is an integrated system that combines the CD or DVD drive of your LightScribe-enabled computer with specially coated discs. These discs can then have laser-etched labels burned directly onto the disc surface by the same laser that burns the content of the discs. This is all

possible with enhanced disc-burning software.

Verbatim offer Lightscribe DVD+R and CD-R discs. For more detailed information about the technology behind 'Lightscribe' products, you can visit www.lightscribe.com or click on the [Verbatim Lightscribe page](#).

The advances that Verbatim is making, is nowhere clearer than in the world of recordable DVD media with 16x DVD+R discs. **Now 4.7GB of data or 120 minutes of video can be recorded in just 5 minutes.**

Once again, by using Verbatim's Advanced AZO technology, the 16x discs will ensure any recording to be of a superior quality and the broad compatibility of Verbatim's discs make them ideal for sharing computer data, home videos, photos and music.

Also available is the **16x DVD+R Printable** media. As well as the impressive recording speed of the discs, this printable media from Verbatim has the new **'wider and whiter'** surface. Where previously colours could appear uncertain, dull and somewhat from those of the original image, with Verbatim's printable disc surface they are now as rich and deep as the original.

Additionally the new printable surface is right up to the hub of the disc. From the outer edge a full 49mm is printable! This helps prevent images being cropped at those critical points and allows your full design to be shown. [For more information about Printable Media, click here.](#)

All the features of Advanced AZO but created for 16x DVD media.

Features of Verbatim DVD:

- Advanced AZO+ / Advanced AZO / Metal AZO Recording Layer
- 8.5GB / 4.7 GB capacity
- Highest level of recording stability
- Superior archival life
- For Video (CLV) and Data (CAV) applications
- Available in Jewel Case, Spindles or Video Tall box

Ultimate resistance to UV light for increased protection and reliability. High quality picture and sound with more than 100 years archival life.

DVD+R offers up to 4 hours of high quality MPEG-2 video and is a cost effective solution for storing, editing and small scale distribution of data and audio/video files. Its high capacity and long data life also make it an excellent storage solution for backup and archiving.

Verbatim can also offer you the range of **'Live It'** DVD Media to suit your needs.

'Live It' moments are fun, crazy, entertaining, and even mad. It's when life is lived to the full. And even though you can't repeat that moment, with the help of Verbatim, you can certainly re-**Live It!**

These are fully printable, yet do not carry any Verbatim branding.	

Cautions

* This media is compliant with the new standards for 8X speed DVD+R recording. However, using this media with the 2.4X-speed DVD+RW/+R drives that do not support higher speed recording speeds may result in writing errors, failures in retrieval of data, or damage to the data recorded on this media. 4x drives might require a firmware upgrade, so please check with your drive manufacturer.

** This media is compliant with the new standards for 1X-4X speed DVD+R recording. However, using this media with the 2.4X-speed DVD+RW/+R drives that do not support 4X recording speeds may result in writing errors, failures in retrieval of data, or damage to the data recorded on this media.

*** This media is compliant with the new standards for 16x DVD+R recording. However, using this media with the lower speed DVD+RW/+R drives that do not support higher speed recording speeds may result in writing errors, failures in retrieval of data, or damage to the data recorded on this media. Older drives might require a firmware upgrade, so please check with your drive manufacturer.
