INTRODUCTION

This publication presenting the information on mineral production for 2011-12 is the 28th issue of the series 'Statistical Profiles of Minerals'. It provides a bird's eye view of different aspects of all the minerals (except atomic, fuel and minor minerals) produced in the country, which fall under the purview of Mineral Conservation and Development Rules, 1988 (MCDR 1988).

The total value of MCDR minerals (excluding atomic, fuel and minor minerals) produced during 2011-12 was Rs. 52393 crore. The principal minerals contributing to the total value were iron ore 72%, limestone 7%, chromite 5%, lead & zinc concentrates 4%, manganese ore 2% and bauxite, copper concentrates, gold and phosphorite 1% each. The share of these ten minerals together in the total value of MCDR mineral production was 94% during 2011-12. The average labour employed during 2011-12 in the mines covered under MCDR 1988 was 1.35 lakh persons per day compared to 1.33 lakh persons per day in the preceding year. During 2011-12, 33% of the total labour was engaged in iron ore mines followed by 17% in limestone, 10% in manganese ore, 5% in bauxite, 4% in chromite, 3% each in copper conc., gold and lead & zinc conc., 2% each in dolomite, garnet (abrasive) and steatite mines, 1% each in chalk, feldspar, kaolin, magnesite, phosphorite, pyrophyllite, quartz, silica sand and sillimanite. The remaining 10% of the labour force were engaged in the mines of other minerals.

The publication contains information on various parameters i.e. mineral reserves and its life index, number of mining leases, lease area, number of mines, production by captive and non-captive mines, public & private sector, A & B category, state and grade etc. Data on employment, stock, principal mines, domestic consumption and exports/imports by countries are also presented in the publication.

The total mineral resources as on 1-4-2010 are classified under Reserves and Remaining Resources. Life Index beyond 1-4-2010 has been worked out using reserves/remaining resources data as per UNFC up to 332 stages. Due to conceptual changes, there will be few notable variations in the life indices if compared with the earlier one. Mineral resources data are updated as on 31-3-2010. The Mineral Economics Division of the Bureau has supplied data on reserves, life index, mining leases and domestic consumption.

Data on production for 2010-11 are based on the production reported by the mine owners through Annual/Monthly returns under the provisions of the MCDR 1988 while those for 2011-12 are based on the monthly production reported by the mine owners in Monthly returns. Data on stocks relate to mine-head at the end of the financial year. The foreign trade data are incorporated for the years 2007-08 to 2011-12 and country-wise information is given for the year 2011-12 as received from the source agency i.e. Director General, Commercial Intelligence & Statistics, Kolkata. The export data includes re-exports for the years 2007-08 to 2011-12. Country-wise break-up of some of the minerals at 8- digit ITC (HS) code level is not available for the year 2011-12. The entire figures of such minerals have been grouped under country-item 'unspecified' and are covered under 'others'. The data in respect of such minerals have limitations to that extent.
