Date of Birth: 23/05/1986

Born in: Catanzaro (CZ), Italy

Nationality: Italian

Research Interests

My research project investigates how developments in epigenetics, under the aegis of the so-called Developmental Origins of Health and Disease (DOHaD) hypothesis, partake to a public discourse renegotiating responsibilities to protect the health of future generations. Drawing from cutting-edge discoveries on developmental origins of health as well as from a historical analysis of notions of inheritance in theoretical biology, the project has the ambition to scrutinize the potential of epigenetics in the reconfiguration of normative, epistemic and social orders of parenting
