- **S:** in case that the data on species are sensitive and therefore have to be blocked for any public access enter: yes
- **NP:** in case that a species is no longer present in the site enter: x (optional)
- **Type:** p = permanent, r = reproducing, c = concentration, w = wintering (for plant and non-migratory species use permanent)
- **Unit:** i = individuals, p = pairs or other units according to the Standard list of population units and codes in accordance with Article 12 and 17 reporting (see [reference portal](#))
- **Abundance categories (Cat.):** C = common, R = rare, V = very rare, P = present - to fill if data are deficient (DD) or in addition to population size information
- **Data quality:** G = 'Good' (e.g. based on surveys); M = 'Moderate' (e.g. based on partial data with some extrapolation); P = 'Poor' (e.g. rough estimation); VP = 'Very poor' (use this category only, if not even a rough estimation of the population size can be made, in this case the fields for population size can remain empty, but the field "Abundance categories" has to be filled in)

Other Site Characteristics

Tra le formazioni geologiche della zona si ricordano le rocce appartenenti all'Unità di Sanremo - M. Saccarello (Flysch di Sanremo), con litotipi calcarei, marnosi, arenacei, argillitici e quarziti e calcari dolomitici giurassici (rispettivamente del Trias inferiore e del Trias medio). L'elemento di maggior spicco del paesaggio è rappresentato dalla dorsale "Cima di Piano Cavallo - M. Cimone - Bric Cornia - Rocca Pennina", culminante nella prima vetta (m 1907), diretta in senso est-ovest. Pareti dolomitiche incombono sul versante destro della valle del torrente Negrone. Morfologie carsiche con inghiottitoi, risorgenze, "troppo pieni" che si attivano alla fusione delle nevi costituiscono elementi di singolare originalità. Nell'area del flysch la morfologia è dolce ed i pendii digradano più o meno regolarmente. Numerosi i corsi d'acqua di elevata purezza fra cui i torrenti Tanarello e Negrone, dalla cui confluenza nasce il fiume Tanaro.

4.2 Quality and importance

L'area presenta frequenti zone di tensione tra lariceti, pinete a pino silvestre, faggete, formazioni arboree miste mesofile, e comprende ambienti di grande pregio. Sono presenti specie dell'allegato I (direttiva 92/43 CEE), numerosissime specie di uccelli (stanziali e migratori) di interesse comunitario, vari endemiti e molteplici specie protette da direttive/convenzioni internazionali.
