1 Overview

These are the installation/upgrade instructions for Cisco MeetingPlace Audio Server Release 5.2. For PCI to 8112 conversion instructions, please refer to *PCI to 8112 Conversion Document* (part number OL-5642-01).

Please refer to the *Cisco MeetingPlace Audio Server 5.2.0y/Cisco MeetingPlace MeetingTime 5.2.0y Release Note* (part number 78-16448-01) for information on compatibility, bug fixes, known issues, and new features. For questions and assistance about installing and upgrading Cisco MeetingPlace Audio Server software, please contact Cisco TAC at the numbers below, or visit the TAC website (<http://www.cisco.com/tac>).

(US) Technical Support	1 800 553 2447 +1 408 526 7209

Asia-Pacific Technical Support	+61 2 8446 7411

2 Naming Conventions Used in This Document

Use the following table to identify the product names used in this document.

Former name	Current name	Also referred to as
MeetingPlace M3 conference server	Cisco MeetingPlace 8112 server	8112
	Cisco MeetingPlace 8106 server	8106

Throughout the remainder of this document, we refer to Cisco MeetingPlace as “MeetingPlace,” and Cisco MeetingPlace MeetingTime as “MeetingTime.”

3 Requirements

3.1 Server Hardware Requirements

Note: Release 5.2 does not support Analog trunks, nor does it support any EISA or PCI hardware platforms or optional cards from those systems.

- Cisco MeetingPlace Audio Server 5.2 can only be installed on 8112 servers.
- Cisco MeetingPlace Audio Server 5.2 supports CD-ROM and no longer supports tape drives.

Cisco MeetingPlace Audio Server Release 5.2 does not support IP Access Blades. If you are upgrading to Release 5.2 and have IP Access Blades, refer to Appendix A in Section 11 for a procedure to follow before doing the formal upgrade.

3.2 MeetingTime Client Software Requirements

- MeetingTime 5.2 client software is required for *System Managers* to access and manage the MeetingPlace 5.2 system.
- *End users* can continue to use the following older versions of MeetingTime to access MeetingPlace functions.
 - Release 5.0.x Windows

3.3 Network Requirements

To connect to other applications, such as MeetingTime and Cisco MeetingPlace Web Conferencing, MeetingPlace requires certain TCP/UDP ports to remain open on your network. Refer to Chapter 3, *Telephony and LAN Planning*, in the *Cisco MeetingPlace Audio Server 5.2 Installation Planning Guide* for further information on network requirements.

3.4 Languages

If you are upgrading from 5.0.x or 5.1.x to 5.2, all languages that are not US English will need to be re-installed after the upgrade. Please refer to Language Installation Procedure for 5.2 on how to install languages on your system.

4 Tools Required

The standard Technician Tool Kit is required. At a minimum a technician should be equipped with the following tools:

Remote Upgrade

- Desktop or laptop with a modem

On-site Upgrade

- Laptop with HyperTerminal installed
- DB9 female to DB9 female null-modem cable

5 Server Software

5.1 Server Software Requirements

The MeetingPlace Audio Server 5.2 Upgrade Kit (9900-9320-01) provides the required server software.

5.2 MeetingPlace Audio Server 5.2 Upgrade Kit

The MeetingPlace Audio Server 5.2 Upgrade Kit (9900-9321-01) contains the following:

Part Number	Revision	Description
78-16448-01	C2	<i>Cisco MeetingPlace Audio Server 5.2.0y/Cisco MeetingPlace MeetingTime 5.2.0y Release Note</i>
OL-5640-02	—	<i>Installation Procedure, Cisco MeetingPlace Audio Server 5.2 (this procedure)</i>
4320-0033-01	A0	MeetingPlace Audio Server 5.2 Upgrade CD

6 MeetingTime Client

6.1 MeetingTime Client Requirements

6.1.1 MeetingTime 5.2 Client Software

System Managers must install MeetingTime 5.2 client software to access and manage the MeetingPlace Audio Server 5.2 system

6.2 MeetingTime for Windows Kit

The MeetingTime for Windows 5.2 media kit (9900-7812-01) contains the following:

Part Number	Revision	Description
9900-7812-01	A0	MeetingTime 5.2 for Windows CD

7 Pre-Upgrade Checklist

✓	Part Number	Description
		<p>Important: Check the /tmp directory to ensure that space is available for the upgrade.</p> <ol style="list-style-type: none"> 1. Log on to the MeetingPlace server as a super user. 2. At the csc prompt, type df. 3. Check the % column (last column) for the percentage of space used on the following partition: <p>/dev/dsnocr.0a – should be less than 90%</p> <p>/dev/sdnocr.0b – should be less than 65%</p> <p>For example (values are in bold underscored for emphasis):</p> <pre>R5GoldenGate:csc\$ df Filesystem BlkSize Blocks Used Free % /dev/sdnocr.0a 16384 31999 25289 6710 79% /dev/sdnocr.1c 16384 320000 73017 246983 22% /dev/sdnocr.0b 16384 51200 15136 36064 29% /dev/sdnocr.0f 16384 63999 20459 43540 31% /dev/sdnocr.0g 16384 1452991 1360105 92886 93% /dev/sdnocr.1g 16384 1452991 1360106 92885 93%</pre> <p>If the percentages are higher, contact Cisco TAC to assist with cleaning up the directory.</p>
		Schedule downtime with customer
		Schedule meetings to reserve ALL available conference ports for the duration of the planned downtime. This prevents users from scheduling meetings during the time you plan to upgrade the system. <i>For systems that already run 5.2 as beta, RAP meeting can be scheduled to reserve all available ports. Please refer to Chapter 2 of Cisco MeetingPlace Audio Server System Manager's Guide.</i>
		Tool Kit
	9900-7438-01	Cisco MeetingPlace Audio Server Customer Engineer Guide (for 8112)
	0520-0030-01 or 78-16449-01	MeetingPlace Audio Server 5.2 Upgrade Procedure (included in Upgrade Kit)
	9900-9321-01	MeetingPlace Audio Server 5.2 Upgrade Kit
	9900-7812-01	MeetingTime 5.2 for Windows Media Kit

7.1 Verify Gateway Versions

Each version of Cisco MeetingPlace Audio Server software only works with specific versions of Cisco integration applications; therefore, it is important to verify gateway versions after any server upgrade, and if necessary, upgrade the gateways to the appropriate versions. Contact Cisco TAC to obtain the correct upgrade software and procedures.

Cisco MeetingPlace Audio Server 5.2 is compatible with currently shipping gateways as indicated in the following compatibility matrix. The compatible versions listed indicate the minimum versions supported.

Gateway	Compatible Versions
Cisco MeetingPlace for Outlook	4.2.5.x and 4.2.7.x
Cisco MeetingPlace Web Conferencing	4.2.7.x and 4.3.0.x
Cisco MeetingPlace SMTP/E-mail Integration	4.2.1.x
Cisco MeetingPlace for Lotus Notes	4.2.7.x
Cisco MeetingPlace for IP Gateway Integration	5.2.x (requires 5.2.0.x GWSIM)
Cisco MeetingPlace Directory Services	4.2.7.x

Note: MeetingPlace Fax Gateway, MeetingPlace Mobile, and MeetingPlace Exchange Gateway are not supported in Cisco MeetingPlace Audio Server 5.2 and later.

7.2 Estimate Upgrade Time

To calculate the time required to upgrade the Cisco MeetingPlace Audio Server, use the following equation:

$$\text{Upgrade Time} = \mathbf{U} \times 0.046 + \mathbf{C} \times 0.15 + 1000 \text{ seconds}$$

Where

U is number of users

C is number conferences.

The Number of User Profiles (**U**) and Number of Conferences (**C**) can be obtained by running **dbsize** from the command line on the server.

Elements	Math	Result
Number of User Profiles: _____	Multiplied by 0.046	
Number of Conferences: _____	Multiplied by 0.15	
Processing Time: 1000 seconds		1000
Total in seconds	Add all results	
Estimated Upgrade Time (Hrs)	Divide Total in seconds by 3600	

8 Remote Upgrade Procedure

1. Have the CD pre-inserted into the CDROM drive
2. Set up a modem and dial in the Cisco MeetingPlace Audio Server. Please refer to CE Guide on how to set up modem connection.
3. Log in to MeetingPlace as technician (i.e., tech\$ prompt) through a telnet session (telnet to 198.207.208.241)
4. Enter the **down** command to down the Cisco MeetingPlace Audio Server software.
5. Note the current time.
6. We strongly recommend that you capture the upgrade session to a log file. Most telnet programs have logging features that you can turn on. Save the session capture to your desktop as "upgrade.txt". In the event that something unexpected occurs with the update, this log will be required by Cisco TAC.
7. Enter the **update** command to begin copying upgrade files from the CD to the system hard drive.
8. When it displays a menu of upgrade sources, enter "1" (CD) as your choice.
9. The system will remind you to wait for the drive to be quiet. Press "enter" when you are ready to install.
10. The system will mount the CDROM drive and check for update sets on the CD.
11. If there are multiple update sets, it will display the list of the sets and you need to select the desired one. If there is only one set, the system will inform you so.
12. When it asks you to confirm the update set, enter "y"
13. The CD is being read at this time. This will take approximately 3 minutes
14. When it prompts you to continue or abort (the upgrade), press enter.
15. If the system gives you the following message, restart the server using **restart disable**. After the system comes back up, dial in the system, log in as technician and resume step 5:

```
A disk backup appears to be active...  
You may restart the system to stop it.
```
16. At this time, Upgrade Phase 1 is started.
17. After phase 1 is completed, the server will restart and continue to phase 2 of the upgrade. At this point, modem connection will be terminated.
18. Please allow approximately 5 minutes for the server to come up before a modem connection can be re-established.
19. Once the modem is connected to the server, status of the upgrade can be viewed by running **update status** in the telnet session. A sample of "update status" command is provided in section 7.2.
20. A real time status can also be displayed by running **update trace** in the telnet window. Please refer to section 7.3 for a sample of real time upgrade status.
21. After phase 2 is finished, the server will restart automatically.
22. Please wait about 5 minutes for the server to come up. Log in the server through a telnet session (could be via network or modem connection).
23. Enter the **restart enable** command to restart the MeetingPlace system if it does not come up by itself.
24. Note the time when the upgrade completes and the MeetingPlace system restarts and is back online. If you had captured the upgrade process to a log file, close the log file and record its location for future retrieval.

25. Please refer to section 9 for Post Upgrade Testing
26. After the upgrade testing is done, if the result is satisfactory and the system is operating correctly, run **save** command.

8.1 Remote Installation/Upgrade (Sample Session without Disk Backup Active)

```
bigfoot:csc$ down
Are you sure (y/n)? y
Checking to see if the system is loaded...OK
System DOWN procedure has been initiated.
The system is DOWN.
bigfoot:csc$ update
Update is from
    1) CD
    2) Diskette
    3) Remote File
    4) Local File
    q) (Quit Update)
Enter choice: 1
Please insert the update CD in the drive, then
wait for the drive to be quiet before continuing.

Press <ENTER> to continue or <CONTROL-C> to abort.

CD mounted OK; checking for update sets...
There is just one update set on the CD.
You wish to install: MeetingPlace 5.2.0r
Is this correct? (y or n) y

enable.
Mon Oct 6 19:56:15 PDT 2003 Software update is complete.
```

9 On-site Upgrade Procedure

1. Log in to MeetingPlace as technician (i.e., tech\$ prompt) through a telnet session or Hyper Terminal.
2. Enter the **down** command to down the Cisco MeetingPlace Audio Server software.
3. Insert the CD in the CDROM drive and note the current time.
4. We strongly recommend that you capture the upgrade session to a log file. Most terminal programs have logging features that you can turn on. Save the session capture to your desktop as "upgrade.txt". In the event that something unexpected occurs with the update, this log will be required by Cisco TAC.
5. Wait for the blinking light on the CDROM drive to stop and the drive is quiet. This will take approximately 1 minutes
6. Enter the **update** command to begin copying upgrade files from the CD to the system hard drive.
7. When it displays a menu of upgrade sources, enter "1" (CD) as your choice
8. The system will remind you to wait for the drive to be quiet. Press "enter" when you are ready to install.
9. The system will mount the CDROM drive and check for update sets on the CD.
10. If there are multiple update sets, it will display the list of the sets and you need to select the desired one. If there is only one set, the system will inform you so
11. When it asks you to confirm the update set, enter "y".
12. The CD is being read at this time. This will take approximately 3 minutes
13. When it prompts you to continue or abort (the upgrade), press enter.
14. If the system gives you the following message, restart the server using "restart disable". After the system comes back up, log in as technician and resume step 7:

```
A disk backup appears to be active...  
You may restart the system to stop it.
```
15. Follow the instructions on the screen and wait for the process to complete.
16. Remove the tape from the tape drive when the update process is completed.
17. Enter the **restart enable** command to restart the MeetingPlace system if it does not come up by itself.
18. Note the time when the upgrade completes and the MeetingPlace system restarts and is back online. If you had captured the upgrade process to a log file, close the log file and record its location for future retrieval.
19. Please refer to section 8 for Post Upgrade Testing
20. After the upgrade testing is done, if the result is satisfactory and the system is operating correctly, run **save** command.

9.1 On-site Installation/Upgrade (Sample Session without Disk Backup Active)

```
mtgplace:tech$ update
```

```
Update is from
```

- 1) CD
- 2) Diskette
- 3) Remote File
- 4) Local File
- q) (Quit Update)

```
Enter choice: 1
```

```
Please insert the update CD in the drive, then
wait for the drive to be quiet before continuing.
```

```
Press <ENTER> to continue or <CONTROL-C> to abort.
```

```
CD mounted OK; checking for update sets...
```

```
There is just one update set on the CD.
```

```
You wish to install: MeetingPlace 5.2.0r
```

```
Is this correct? (y or n) y
```

```
-----
- MeetingPlace software release 5.2.0
- Archive created: Fri Oct 3 13:51:39 PDT 2003
-----
```

```
Press <ENTER> to continue or <CONTROL-C> to abort.
```

```

10 Final System Functionality Test

10.1 Telephony

Verify that users can call into or out of the MeetingPlace system with PSTN and/or VoIP. Also confirm that the system is playing the correct prompts in the correct languages.

10.1.1 Inbound Calls

Dial the DID number of the server. MeetingPlace should answer the call and you should hear the "Welcome to MeetingPlace" prompt.

10.1.2 Outbound Calls

Schedule an immediate meeting on each server. Join the meeting and press #31 to outdial to another phone number.

10.2 Schedule and Attend

Verify that users can schedule and attend new meetings.

10.2.1 From Voice Interface

- Schedule and attend an immediate meeting via the phone interface
- Schedule and attend a meeting in the future via the phone interface

10.2.2 From Workstation Clients

- Via the appropriate MeetingTime workstation client, log in through a System Manager profile. Schedule an immediate meeting and attend that meeting.
 - For Cisco MeetingPlace Audio Server 5.2, you need MeetingTime version 5.2

10.3 Conference Recording

If the system is configured for recording capabilities, verify recording capabilities.

10.3.1 Reserved Meeting Recording

- Schedule a meeting with the recording turned on.
- Verify that the meeting is indeed recorded and that the recording is retrievable after the meeting.

10.3.2 Non-Reserved Meeting Recording (Ad-hoc Recording)

- Schedule a meeting without recording. During the course of the meeting, activate recording.
- Verify that the meeting is indeed recorded and that the recording is retrievable after the meeting.

10.4 Database Integrity

Verify that the database, as it existed before the upgrade, has not been corrupted by the upgrade process.

10.4.1 Verify Name Headers

Do a random spot check of some profiles that are known to have recorded names to verify that the recorded names have been retained.

10.4.2 Verify Meetings in Schedule Tab

Do a random spot check to verify that meetings that were scheduled before the upgrade are preserved after the upgrade.

10.5 Gateways

All gateways (Outlook and Web) should be functioning as they were before the upgrade.

10.5.1 Verify Outlook Gateway Notification Function

1. Schedule a meeting with both sending and receiving notification enabled.
2. Select Outlook as the preferred delivery method.
3. Verify the meeting notification is sent via e-mail.

10.5.2 Verify Outlook Gateway Scheduling Function

1. Schedule a meeting using the MeetingPlace Outlook Scheduling Form.
2. Verify a confirmation message is sent back to the meeting scheduler indicating that the meeting scheduling operations succeeded.

10.5.3 Verify Web Functions

1. Schedule a meeting using the MeetingPlace Web Scheduling Page.
2. Verify the scheduled meeting is posted via telephony and MeetingTime client.
3. Schedule a meeting using the MeetingTime client.
4. Verify the scheduled meeting is posted in MeetingPlace Web.

11 Appendix A About IP Access Blades

Cisco MeetingPlace Audio Server Release 5.2 does not support Cisco MeetingPlace 8112 systems that use IP Access Blades for VoIP connectivity. The hardware on these systems, which are Release 5.1, must be replaced. For Release 5.2, the IP Access Blades have been replaced by the MA-4 and MA-16 Multi Access Blades.

11.1 Replacing the IP Access Blades

Follow these steps to replace the IP Access Blades that were used in Cisco MeetingPlace Audio Server Release 5.1 with the newer MA-4 and MA-16 Multi Access Blades:

1. Procure the required number of MA-4 or MA-16 replacement Multi Access Blades for the IP Access Blades:
 - If the number of desired (or previously licensed ports) is 120 or less, you need one MA-4.
 - If the number of desired (or previously licensed ports) is more than 120 but less than 240, you need two MA-4s.
 - If the number of desired (or previously licensed ports) is more than 240, you need an MA-16.

NOTE: The old, phased out IP Access Blades can now be used as onsite Smart Blade spares. Alternately, you may wish to increase the VoIP port capacity of your Cisco MeetingPlace Audio Server system by buying more Multi Access Blade capacity. You can then reuse the IP Access Blades as Smart Blades. In this case, discuss your requirements with your Cisco installer or Cisco TAC to determine your Multi Access Blade needs.

2. Unconfigure all IP Access Blade ports in your Cisco MeetingPlace Audio Server Release 5.1 system.
3. Restart your Cisco MeetingPlace Audio Server system.
4. Upgrade your Cisco MeetingPlace Audio Server Release 5.1 system to Cisco MeetingPlace Audio Server Release 5.2.
5. Power down your Cisco MeetingPlace Audio Server system.
6. Replace the old IP Access Blades and add the new Multi Access Blades. See the *Customer Engineering Guide for Cisco MeetingPlace Audio Server Release 5.2* for complete information.
7. Using the number of IP ports from step 1 and the number of existing PSTN ports from before, determine the new board configuration, and repopulate the boards as specified.
8. Power up your Cisco MeetingPlace Audio Server system.
9. Use the **blade** command to configure your Cisco MeetingPlace Audio Server system for the PSTN and IP ports desired using the new board configuration. See the *Customer Engineering Guide for Cisco MeetingPlace Audio Server Release 5.2* for complete instructions about using the **blade** command.
10. Restart your Cisco MeetingPlace Audio Server system so that the new configuration from step 9 takes affect.
11. Test that your newly-configured Cisco MeetingPlace Audio Server system, and all its ports, works.
