PİRİ REİS UNIVERSITY MARITIME FACULTY

Marine Engineering Programme Course Catalog Form

Course Name : Propulsion Engineeri			eering Degree: Bachelor of Science				
				Course Implementation, Hours/Week			
Code Year/Semester		Local Credits	ECTS Credits	Course	Tutori	ial Laboratory	
SM 415	4/7 (Fall)	3	4	3	-		-
Department		Marine Engineering					
Instructor		Deniz UNSALAN, Ph.D., Professor					
Contact Information		0-216-5810072					
Office Hours		Any time					
Web page							
Course Type		Compulse	ory	Course Language	English	h	
Course Prereq	uisites	SM 211					
Course Catego	rv by Content. %	Basic Scien	ces Engineering Scie	nce Engineerin	g Design	esign Humanities	
Course Catego	ly by Content, /	25	40	35		-	
Course Description		The student gains a higher level of knowledge related to power production, transmission, hydrodynamic phenomena related to ship propulsion and problems related to shafting. Modern trends in ship propulsive power transmission are studied, and fuel consumption concepts are examined. The importance of hull and propeller maintenance and weather routing is stressed.					
Course Objectives		The successful student shall be able to assess the propulsive efficacy of a given ship in terms of performance and operational/acquisition costs.					
Course Learning Outcomes		 Students who successfully pass the course will acquire knowledge and skills as listed below: I. The chain of power losses starting from fuel combustion to the ship propulsion. II. Various propulsive systems and their specific uses in a comparative form. III. Various propeller/propulsion systems with specific reference to screw propeller IV. In-service factors influencing ship propulsion and remedies for increasing ship performance. V. Calculations related to fuel consumption. 					
Instructional Methods and Techniques		Lecture					
Tutorial Place	Interview Class room						
Co-term Condi	tion	Not applicable					
Textbook		 Marine Propellers, 2nd Ed., by J.S.Carlton, Butterworth-Heinemann Ship Design and Performance, by C.B. Barrass, Elsevier-BH 					
Other References		• Various					
Homework & Projects		Students will be required to prepare a term paper on a particular topic related					
Laboratory Work							
Computer Use							
Other Activities							

	Activities	Quantity	Effects on Grading, %
	Attendance		
	Midterm		25%
	Quiz		
	Homework		-
	Term Paper/Project		25%
	Laboratory Work		
	Practices		
Assessment Criteria	Tutorial		
	Seminar		
	Presentation		
	Field Study		
	Final Exam		%50
	TOTAL		%100
	Effects of Midterm on Grading, %		%25
	Effects of Final on Grading, %		%50
	TOTAL		%100

		Course
Week	Topics	Outcomes
1	General overview of ship resistance	
2	Chain of power transmission from fuel combustion to propeller slipstream, losses	
3	Propulsive efficiency of a ship, momentum, blade element, lifting line/surface theories	
4	Shafting, reduction of shaft revolutions, shaft alignment procedures	
5	Various ship propulsive systems and their relative usage	
6	Importance of hull and propeller maintenance, dry docking and coating procedures	
7	Midterm Exam	
8	Assessment of in-service factors, weather routing	
9	Ship propulsion economics- Issues related to fuel consumption: Relationship between fuel	
	consumption, displacement, ship speed and voyage length.	
10	Introduction to engineering economics as a tool for assessing the merits of propulsion systems	
11	Term paper presentation I	
12	Term paper presentation II	
13	Term paper presentation III	
14	General overview	

Relationship between the Course and the Marine Engineering Curriculum

	Program Outcomes			Level of Contribution		
		1	2	3		
a	An ability to apply knowledge of mathematics, science, and engineering	Х				
b	An ability to design and conduct experiments, as well as to analyze and interpret data		Х			
c	An ability to design a system, component or process to meet desired needs			Х		
d	Ability to function on multi-disciplinary teams			Х		
e	An ability to identify, formulate, and solve engineering problems			Х		
f	An understanding of professional and ethical responsibility					
g	An ability to communicate effectively					
h	The broad education necessary to understand the impact of engineering solutions in a global and societal context			Х		
i	A recognition of the need for, and an ability to engage in life-long learning			Х		
j	A knowledge of contemporary issues			Х		
k	An ability to use the techniques, skills and modern engineering tools necessary for engineering practice			Х		
1	An ability to apply legal, societal and environmental knowledge in maritime transport and in all respective modes of transport operations.			Х		
m	An ability to interpret and analysis of the data regarding maritime management and operations, recognition and solution of problems for decision making process.			Х		

1: Small, 2: Partial, 3: Full
