Power Supply Overview

Installation has been simplified in the PS900 series of Power Supplies by utilizing a flat mounting design and polarized locking connectors for option boards. This new design eliminated the need for racks and side connectors. The flat mounting of the option boards also provides for easier access to the terminal blocks for connection of electrified devices (such as electrified panic devices, strikes, card readers, etc.) Common to the line of PS900 Series power supplies is a constant output rating at both 12v and 24v setting, universal 120 VAC to 240 input, and polarized option board connectors. New fire alarm interface board mounting allows outputs to be configured as switched (power cut) or unswitched (power continues) when signal provided.
