- Weather sheet
- Weight and Balance Sheet
- Navigation Log
- Weekly Aircraft Inspection

Weather and Weight and Balance Sheets

Before every flight students are required to complete the Weather and Weight and balance sheet contained in this appendix. Pads of these forms are kept in the dispatch area for student use.

Preflight Weather Information

For all cross-country flights pilots MUST call 1-800-wx-brief and get a personalized briefing. Students should also setup a personal route on the Internet and print a complete package. The package MUST include all METARS, TAFs, FD, SIGMET and **NOTAMS** for the route. You may also want to print the GFAs if there are any active systems.

Prior to local flights examine the NOTAM list printed by the dispatcher and posted in the dispatch area (if this is not available check Notams online for yourself.) Check of NOTAMS on the weight and balance sheet (upper right corner) only after you have checked all these NOTAMS.

For local flights students should self-brief from the Internet and complete the weather form on the next page. Copy down the CYCG TAF and METAR. Also copy METARS and TAFs for airports nearby where the weather may be coming from. Usually this is airports to the west such as CYYF, CYLW, CYDC, CYHE. Sometimes it is from the east, such as CYXC.

Even for local flight, if the weather is questionable print a full weather package from the Internet and be prepared to discuss it with an instructor.

Navigation Log

Before every cross-country flight students are required to complete a navigation log.

The Selkirk College Planning log on the next page is used for all cross-countries, both VFR and IFR. Finished flight planning can be transferred to a condensed version of the navlog also provided below. Students should generally use the complete navlog for the first several cross country flights and use the condensed version for later trips.

In addition to the navlog pilots must file a NavCanada flight plan before each flight. Pads of these forms are normally kept in the dispatch area however an electronic version can accessed from the Intranet.

Selkirk College IATPL Program Manual Weekly Aircraft Inspection

The team captain is responsible for making sure someone completes this inspection at least once per week. The team captain must keep this form and turn it in to the CFI at the end of the semester. The CFI may request to see the form at any time.

Instructions for inspectors:

- 1. Enter date of inspection at top of column
- 2. Initial each item inspected if it is acceptable
- 3. Note any discrepancies
- 4. Replenish supplies of Kimwipes, oil, funnels, etc from back room
- 5. Return the form to the team captain

NOTE:

This form can be used for seven inspections. There should be 14 inspections per semester therefore two of these forms are needed.

Get copies of this form from the CFI or print them from the Intranet.

Discrepancy Reporting

In addition to the inspection form carry a clipboard with some blank paper to make notes about any discrepancies.

If inspectors note items such as hoods, dipsticks, chocks etc need to be replaced write a note to the CFI informing him.

If there is any "junk" in the airplanes including seat pouches, the floor, map-box, etc. remove it. That includes personal items such as CFS or CR3s.

Report any malfunctioning items such as zippers on the storage pouches to the CFI.

Report broken items such as seatbelts, door handles, etc. the Person Responsible for maintenance AND the CFI.

Make sure that ONLY the designated items – POH, GPS Manual, and First aid kit – are in the seat pouches. ALL other items must be removed.
